Evolution Lost

Canine and Feline Nutrition - E-Book

Summary of Floods in the United States, January 1992 Through September 1993

Essentials of HRM combines a commentary on organizational behaviour with an explanation of human resource management techniques, and also acts as an introduction to industrial relations. It will prove an invaluable aid to those studying for professional qualifications, such as Membership of the Institute of Personnel Management or the Diploma in Management Studies, and for students on general business or social service courses. Equally, the practising manager will find this book a useful and practical guide.

Resurrection Science

Mind the Gap

Essentials of Human Resource Management

"The Morant Bay Rebellion, otherwise known as the Native Baptist War represents an important watershed in Jamaican history. Traditional historiography has often

represented the actions of Paul Bogle hero/villan Baptist Deacon and his followers when they marched on the Morant Bay court house in 1865 as being motivated by mere murderous intent. Thoroughly researched and drawing on original documents attributed to Bogle and other Native Baptists, *The Cross and the Machete* provides and alternative interpretation of Bogle s actions and introduces a new paradigm for understanding the struggle for equality, justice and liberation. "

Protecting the Wild

Thirty years of *Đổi Mới* (economic renovation) reforms have catapulted Vietnam from the ranks of the world's poorest countries to one of its great development success stories. Critical ingredients have been visionary leaders, a sense of shared societal purpose, and a focus on the future. Starting in the late 1980s, these elements were successfully fused with the embrace of markets and the global economy. Economic growth since then has been rapid, stable, and inclusive, translating into strong welfare gains for the vast majority of the population. But three decades of success from reforms raises expectations for the future, as aptly captured in the Vietnamese constitution, which sets the goal of "a prosperous people and a strong, democratic, equitable, and civilized country.†? There is a firm aspiration that by 2035, Vietnam will be a modern and industrialized nation moving toward becoming a prosperous, creative, equitable, and democratic society. The Vietnam 2035 report, a joint undertaking of the Government of Vietnam and the World Bank Group, seeks to better comprehend the challenges and opportunities that lie ahead. It shows that the country's aspirations and the supporting policy and institutional agenda stand on three pillars: balancing economic prosperity with environmental sustainability; promoting equity and social inclusion to develop a harmonious middle- class society; and enhancing the capacity and accountability of the state to establish a rule of law state and a democratic society. Vietnam 2035 further argues that the rapid growth needed to achieve the bold aspirations will be sustained only if it stands on faster productivity growth and reflects the costs of environmental degradation. Productivity growth, in turn, will benefit from measures to enhance the competitiveness of domestic enterprises, scale up the benefits of urban agglomeration, and build national technological and innovative capacity. Maintaining the record on equity and social inclusion will require lifting marginalized groups and delivering services to an aging and urbanizing middle-class society. And to fulfill the country's aspirations, the institutions of governance will need to become modern, transparent, and fully rooted in the rule of law.

Super Pop!

****A Library Journal Best Book of 2015 **** ****A Christian Science Monitor Top Ten Book of September**** In a world dominated by people and rapid climate change, species large and small are increasingly vulnerable to extinction. In *Resurrection Science*, journalist M. R. O'Connor explores the extreme measures scientists are taking to try and save them, from captive breeding and genetic management to de-extinction. Paradoxically, the more we intervene to save species, the less wild they often become. In stories of sixteenth-century galleon excavations, panther-tracking in Florida swamps, ancient African rainforests, Neanderthal tool-making, and cryogenic DNA banks, O'Connor investigates the philosophical questions of an age

in which we "play god" with earth's biodiversity. Each chapter in this beautifully written book focuses on a unique species--from the charismatic northern white rhinoceros to the infamous passenger pigeon--and the people entwined in the animals' fates. Incorporating natural history and evolutionary biology with conversations with eminent ethicists, O'Connor's narrative goes to the heart of the human enterprise: What should we preserve of wilderness as we hurtle toward a future in which technology is present in nearly every aspect of our lives? How can we co-exist with species when our existence and their survival appear to be pitted against one another?

Schwatka's Search

Fear and terror have come to drive world politics, and the people who do the driving have shaped and used them to carry out their policies. As the world's political economy devolves into chaos, Globalization of American Fear Culture posits that violence and fear have become the new statecraft.

My Life

Protected natural areas have historically been the primary tool of conservationists to conserve land and wildlife. These parks and reserves are set apart to forever remain in contrast to those places where human activities, technologies, and developments prevail. But even as the biodiversity crisis accelerates, a growing number of voices are suggesting that protected areas are passé. Conservation, they argue, should instead focus on lands managed for human use—working landscapes—and abandon the goal of preventing human-caused extinctions in favor of maintaining ecosystem services to support people. If such arguments take hold, we risk losing support for the unique qualities and values of wild, undeveloped nature. Protecting the Wild offers a spirited argument for the robust protection of the natural world. In it, experts from five continents reaffirm that parks, wilderness areas, and other reserves are an indispensable—albeit

insufficient—means to sustain species, subspecies, key habitats, ecological processes, and evolutionary potential. Using case studies from around the globe, they present evidence that terrestrial and marine protected areas are crucial for biodiversity and human well-being alike, vital to countering anthropogenic extinctions and climate change. A companion volume to *Keeping the Wild: Against the Domestication of Earth*, *Protecting the Wild* provides a necessary addition to the conversation about the future of conservation in the so-called Anthropocene, one that will be useful for academics, policymakers, and conservation practitioners at all levels, from local land trusts to international NGOs.

Cross-Country Cat

What kind of cat would go sliding off on skis, and who'd believe it anyway? When the family accidentally leaves Henry, their sassy Siamese, behind at the ski lodge, he takes matters into his own paws in this beguiling adventure.

Books in Print Supplement

Albania provides a small amount of social assistance to nearly 20% of its population through a system which allows a degree of community discretion in determining distribution. This study investigates the poverty targeting of this program. It indicates that relative to other safety net programs in low income countries, social assistance in Albania is fairly well targeted to the poor.

The Language Instinct

Without recourse to mythology or hyperbole, Gordon demonstrates that the historical and philosophical ramifications of Davos '29 are even more profound than previously understood. The publication of *Continental Divide* signals a major event in the fields of modern history and Continental philosophy.---John P. McCormick, University of Chicago --

Contextual Cognitive-behavioral Therapy for Chronic Pain

"Meister Eckhart's complete mystical teachings together in one volume, for the first time! With a foreword by leading Eckhart scholar Bernard McGinn, and the elegant translation of Maurice O'C Walshe, this comprehensive and authoritative work is a treasure for every serious spiritual seeker, and the finest volume on Eckhart ever to appear in English."--Publisher's website.

Global Re-introduction Perspectives

After decades of civil war and instability, the African country of Angola is experiencing a spectacular economic boom thanks to its most valuable natural resource: oil. Focusing on the everyday realities of people living in the extraction zones, Reed explores the exclusion, degradation, and violence that are the fruits of petrocapi-talism in Angola.

Crude Existence

Aim of this book is to provide scientists, veterinarians and policy-makers with an expert analysis of rabies from ancient times to today. The principle objectives are to summarise our knowledge of the history of rabies in Europe and the Mediterranean Basin and to describe the various strategies that have been used to eliminate (terrestrial) rabies from reservoir populations.

Origin and Evolution of Biodiversity

The Political Theory of Recognition

This is an introductory text for students interested in identification and analysis of animal remains from archaeological sites. The emphasis is on animals whose remains inform us about the relationship between humans and their natural and social environments, especially site formation processes, subsistence strategies, the processes of domestication, and paleoenvironments. Examining examples from all over the world, from the Pleistocene period up to the present, this volume is organized in a way that is parallel to faunal study, beginning with background information, bias in a faunal assemblage, and basic zooarchaeological methods. This revised edition reflects developments in zooarchaeology during the past decade. It includes sections on enamel ultrastructure and incremental analysis, stable isotopes and trace elements, ancient genetics and enzymes, environmental reconstruction, people as agents of environmental change, applications of zooarchaeology in animal conservation and heritage management, and a discussion of issues pertaining to the curation of archaeofaunal materials.

Free-Ranging Dogs and Wildlife Conservation

This book provides a new synthesis of the published research on the Quaternary of Ireland. It reviews a number of significant advances in the last three decades on the understanding of the pattern and chronology of the Irish Quaternary glacial, interglacial, floristic and occupation records. Those utilising the latest technology have enabled significant advances in geochronology using accelerated mass spectrometry, cosmogenic nuclide extraction and optically stimulated luminescence amongst others. This has been commensurate with high-resolution

geomorphological mapping of the Irish land surface and continental shelf using a wide range of remote sensing techniques including MBES and LIDAR. Thus the time is ideal for a state of the art publication, which provides a series of authoritative reviews of the Irish Quaternary incorporating these most recent advances.

A Naturalist's Guide to the Great Plains

This report provides information for use in both short- and long term land-planning decisions, particularly at the county level, and an indication of the present and future economic impact of mineral and energy development. The report discusses eight major commodity groups: (1) oil and gas, (2) coal and coal resin, (3) coal-bed methane, (4) other energy resources (oil-impregnated rock, oil shale, geothermal), (5) uranium and vanadium, (6) metallic minerals, (7) industrial rocks and minerals, and (8) ground-water resources. In general, for each group or commodity within a group the following aspects are discussed: (1) known occurrences and characteristics, (2) past production and trends, (3) current production and exploration activity, and (4) geologic potential. Plates accompany each of the major commodity groups and show the locations of known resources and areas of geologic potential. In addition to the commodity discussions, the report contains a brief summary of land ownership status and concludes with a summary of commodities having the best potential for discovery and development. 161 pages + 14 plates

Wärtsilä Encyclopedia of Ship Technology

Zoo and Wild Mammal Formulary offers fast access to authoritative dosing information for drugs used in more than 35 zoo and wild mammal groups, including marsupials, bears, and elephants. Taking an easy-to-use tabular format, the book is organized by taxa, with drug doses sorted by type and alphabetically arranged in every chapter. Clear and comprehensive, the book offers dosages for all important drugs, including antibiotics, antifungals, anesthetics, analgesics, and more. Each dose is referenced with a journal or textbook source, including the number of animals in the study where available, making it easy to find trusted information. Offers essential drug information for a wide range of zoo and wild mammals in an easy-to-consult format Provides dosing amounts for all important drugs, including antibiotics, antifungals, anesthetics, and analgesics Includes dosages for over 35 mammal groups, including marsupials, bears, and elephants Takes a tabular approach for quick reference Makes it easy to find a referenced dose for these animals, eliminating time spent searching through other sources Zoo and Wild Mammal Formulary is an essential reference for all veterinarians seeing zoo and wild animal patients, including zoo and wildlife veterinarians, veterinary specialists, and veterinary students.

Wild Cats

Author second-in-command of party of five, which sledged from Chesterfield Inlet to King William Island and back, 1878-80.

Social Assistance in Albania

How well can you answer pet owners' questions about proper diet and feeding? *Canine and Feline Nutrition, 3rd Edition* describes the role of nutrition and its effects upon health and wellness and the dietary management of various disorders of dogs and cats. By using the book's cutting-edge research and clinical nutrition information, you'll be able to make recommendations of appropriate pet food and proper feeding guidelines. Pet nutrition experts Linda P. Case, MS, Leighann Daristotle, DVM, PhD, Michael G. Hayek, PhD, and Melody Foess Raasch, DVM, provide complete, head-to-tail coverage and a broad scope of knowledge, so you can help dog and cat owners make sound nutrition and feeding choices to promote their pets' health to prolong their lives. Tables and boxes provide quick reference to the most important clinical information. Key points summarize essential information at a glance. A useful *Nutritional Myths and Feeding Practices* chapter dispels and corrects common food myths. New clinical information covers a wide range of emerging nutrition topics including the role of the omega-3 and omega-6 fatty acid families in pet health and disease management. Coverage of pet food safety and pet food ingredients includes both commercially and home-prepared foods and provides answers to pet owners' questions on these topics. Completely updated content reflects the latest findings in clinical nutrition research. Information regarding functional ingredients and dietary supplementation provides a scientifically based rationale for recommending or advising against dietary supplements. Guidelines for understanding pet food formulations and health claims differentiate between "market-speak" and actual clinical benefits for patients, with practice advice for evaluating and selecting appropriate foods.

WHO/OIE Manual on Echinococcosis in Humans and Animals

The book includes 19 selected contributions presented at the 21st Evolutionary Biology Meeting, which took place in Marseille in September 2017. The chapters are grouped into the following five categories: · Genome/Phenotype Evolution · Self/Nonself Evolution · Origin of Biodiversity · Origin of Life · Concepts The annual Evolutionary Biology Meetings in Marseille serve to gather leading evolutionary biologists and other scientists using evolutionary biology concepts, e.g. for medical research. The aim of these meetings is to promote the exchange of ideas to encourage interdisciplinary collaborations. Offering an up-to-date overview of recent findings in the field of evolutionary biology, this book is an invaluable source of information for scientists, teachers and advanced students.

Energy, Mineral, and Ground-water Resources of Carbon and Emery Counties, Utah

President Bill Clinton's *My Life* is the strikingly candid portrait of a global leader who decided early in life to devote his intellectual and political gifts, and his extraordinary capacity for hard work, to serving the public. It shows us the progress of a remarkable American, who, through his own enormous energies and efforts, made the unlikely journey from Hope, Arkansas, to the White House—a journey fueled by an impassioned interest in the political process which manifested itself at every stage of his life: in college, working as an intern for Senator William Fulbright; at Oxford, becoming part of the Vietnam War protest movement; at Yale Law School, campaigning on the grassroots level for Democratic candidates; back

in Arkansas, running for Congress, attorney general, and governor. We see his career shaped by his resolute determination to improve the life of his fellow citizens, an unfaltering commitment to civil rights, and an exceptional understanding of the practicalities of political life. We come to understand the emotional pressures of his youth—born after his father's death; caught in the dysfunctional relationship between his feisty, nurturing mother and his abusive stepfather, whom he never ceased to love and whose name he took; drawn to the brilliant, compelling Hillary Rodham, whom he was determined to marry; passionately devoted, from her infancy, to their daughter, Chelsea, and to the entire experience of fatherhood; slowly and painfully beginning to comprehend how his early denial of pain led him at times into damaging patterns of behavior. President Clinton's book is also the fullest, most concretely detailed, most nuanced account of a presidency ever written—encompassing not only the high points and crises but the way the presidency actually works: the day-to-day bombardment of problems, personalities, conflicts, setbacks, achievements. It is a testament to the positive impact on America and on the world of his work and his ideals. It is the gripping account of a president under concerted and unrelenting assault orchestrated by his enemies on the Far Right, and how he survived and prevailed. It is a treasury of moments caught alive, among them: • The ten-year-old boy watching the national political conventions on his family's new (and first) television set. • The young candidate looking for votes in the Arkansas hills and the local seer who tells him, "Anybody who would campaign at a beer joint in Joiner at midnight on Saturday night deserves to carry one box. . . . You'll win here. But it'll be the only damn place you win in this county." (He was right on both counts.) • The roller-coaster ride of the 1992 campaign. • The extraordinarily frank exchanges with Newt Gingrich and Bob Dole. • The delicate manipulation needed to convince Rabin and Arafat to shake hands for the camera while keeping Arafat from kissing Rabin. • The cost, both public and private, of the scandal that threatened the presidency. Here is the life of a great national and international figure, revealed with all his talents and contradictions, told openly, directly, in his own completely recognizable voice. A unique book by a unique American. From the Hardcover edition.

Wildlife in Lao PDR

The Complete Mystical Works of Meister Eckhart

Presents the most comprehensive and up-to-date information available on the 36 wild cats of the world. It includes the first published collection of detailed range maps and some of the first photographs of rare species in the wild. It provides a thorough review of major issues in cat conservation such as habitat loss and management of big cats in livestock areas; field and laboratory research; international trade; the role of zoos; and reintroduction. High priority are identified to further the cause of cat conservation.

Zooarchaeology

In recent years the political landscape has changed: established ideas about class,

economy, nation and equality have been challenged by a new politics of identity, culture, ethnicity and difference. The political theory of recognition is a response to these challenges. In this, the first introductory book on the subject, Simon Thompson analyses the argument that a just society is one that shows all its members due recognition. Focusing on the work on Charles Taylor, Axel Honneth and Nancy Fraser, he discusses how political theorists have conceptualised recognition, the different accounts they have given and the criticisms made of the very idea of a politics of recognition. Through the political theory of recognition, Thompson argues, we gain a better understanding of identity and difference. Practically, the concept of recognition can serve as a basis for determining which individual rights should be protected, whether cultures ought to be valued, and whether a case can be made for group representation. This clear and accessible book provides an excellent guide through the ongoing and increasingly significant debate between multiculturalism and its critics.

The Development of Consciousness

The books in the Florida and the Caribbean Open Books Series demonstrate the University Press of Florida's long history of publishing Latin American and Caribbean studies titles that connect in and through Florida, highlighting the connections between the Sunshine State and its neighboring islands. Books in this series show how early explorers found and settled Florida and the Caribbean. They tell the tales of early pioneers, both foreign and domestic. They examine topics critical to the area such as travel, migration, economic opportunity, and tourism. They look at the growth of Florida and the Caribbean and the attendant pressures on the environment, culture, urban development, and the movement of peoples, both forced and voluntary. The Florida and the Caribbean Open Books Series gathers the rich data available in these architectural, archaeological, cultural, and historical works, as well as the travelogues and naturalists' sketches of the area in prior to the twentieth century, making it accessible for scholars and the general public alike. The Florida and the Caribbean Open Books Series is made possible through a grant from the National Endowment for the Humanities and the Andrew W. Mellon Foundation, under the Humanities Open Books program.

Advances in Irish Quaternary Studies

Super Pop! offers a maximum-pleasure, minimum-effort way to become smarter, happier, and more likely to survive your next family function (or a shark attack). This hilarious and wide-ranging guide sorts nearly 500 different bestsellers, blockbusters, and underappreciated gems into quirky top ten lists, like "Outwit Death: Essential Lessons in Survival," and "Achieve Mindfulness: Movies That Will Show You the Way (With Wise Elders Now Included)." So whether you're looking for some motivational workout music, need help planning a July 4th double feature, or just want to pick up some knowledge without straining your brain, this book has you covered. With new insights on old classics and fresh ideas for jaded eyes, Super Pop! makes sense of pop culture — and then puts pop culture back to work!

Mammals of Korea

Archaeology of Precolumbian Florida

This edited volume adopts a global perspective to review how dogs interact with wildlife, how humans perceive these interactions, the potential importance of dog-wildlife interactions, and the scope of the problems.

I'm Pretty Sharp

"A CEVAM book." Bibliography: p. 259-265. Includes index.

Globalization of American Fear Culture

The classic book on the development of human language by the world's leading expert on language and the mind. In this classic, the world's expert on language and mind lucidly explains everything you always wanted to know about language: how it works, how children learn it, how it changes, how the brain computes it, and how it evolved. With deft use of examples of humor and wordplay, Steven Pinker weaves our vast knowledge of language into a compelling story: language is a human instinct, wired into our brains by evolution. The Language Instinct received the William James Book Prize from the American Psychological Association and the Public Interest Award from the Linguistics Society of America. This edition includes an update on advances in the science of language since The Language Instinct was first published.
