Quartet for the End of Time: A Novel

Humanware is everything which helps human beings to handle (use and look after) a product, e.g. controls and indicators, program ergonomics, location of assembly divisions in parts to be put together, signs and other markings, instructions, training and technical consultation. Against the background of how humans behave when handling a product, this book offers advice and explains principles for suitable design of humanware: how to analyse needs, design different types of humanware, and test that it works. A wide range of specific examples are described. Exercises after each chapter give readers the possibility of trying to solve humanware problems themselves. Suggested solutions are provided at the end of the book. The book is intended for practising developers, designers and technical communicators, and for students of these professions.

At the end of 1912 Jacques Schneider announced his intention of presenting an annual trophy for an international seaplane contest. There were only twelve Schneider contests but they were major international events with the major rivals being Britain and Italy, followed by France and the US. Biplane seaplanes and flying-boats predominated the early contests and some very advanced twin-float

biplanes were among the winners as late as 1925. However, it was the monoplane which was to become the symbol of Schneider Trophy, with Supermarine and Macchi designs reaching the peak of racing seaplane performance. The final winning combination of Supermarine airframe and Rolls-Royce engine was to make a vital contribution to Britain's defence in 1940 in the form of the Rolls-Royce powered Hurricane and Spitfire. This book records the contests and, in considerable detail, the design, development and achievements of the participating aircraft; those which failed to take part; and the projects, some of which embodied very advanced ideas even if they were proved to be unrealistic.

The Sweet Briar Ladies Society Sewing Circle is needed by the death of a highly strung woman in the new mystery by the author of *Wedding Duress*. Downtown Sweet Briar is now home to a new sewing shop run by one of the circle's own. With the help and support of her fellow members, Rose is determined to make SewTastic a success, and, to that end, she decides to sponsor a series of do-it-yourself weekends for sewing enthusiasts. But when a group arrives at SewTastic to work on a project, a loud and argumentative guest pushes everyone's buttons. And when she winds up dead in Rose's project room—strangled by a sewing machine power cord—it's up to Tori and the gang to stitch together the clues before Rose's reason for living is ripped apart at the seams. Temper tantrums in the supermarket. Tears that seem to come out of nowhere. Battles over homework that are more like wars. When your child has problems regulating his or her emotions, there's no hiding it. Children with intense emotions go from 0 to 100 in seconds and are prone to frequent emotional and behavioral outbursts that leave parents feeling bewildered and helpless. Other parents may have told you that it's just a phase or that your child needs discipline. In reality, your child may have emotion dysregulation, a tendency to react intensely to situations other children take in stride. Parenting a Child Who Has Intense Emotions is an effective guide to de-escalating your child's emotions and helping your child express feelings in productive ways. You'll learn strategies drawn from dialectical behavior therapy (DBT), including mindfulness and validation skills, and practice them when your child's emotions spin out of control. This well-researched method for managing emotions can help your child make dramatic emotional and behavioral changes that both of you will be proud of.

With such an abundance of homelectical materials in general, I was concerned that there seemed to be very little to offer guidance for the funeral setting. The goal of this book is to provide resource material for a setting that has so much potential for ministry. - From the Preface.

"Using examples from architecture, film, literature, and the visual arts, this wide-ranging book examines the place and significance of New York City in the urban imaginary between 1890 and 1940. In particular, *Imagining New York City* considers how and why certain city spaces--such as the skyline, the sidewalk, the slum, and the subway--have come to emblemize key aspects of the modern urban condition. In so doing, the book also considers the ways in which cultural developments in the late nineteenth and early twentieth centuries set the stage for more recent responses to a variety of urban challenges facing the city, such as post-disaster recovery, the renewal of urban infrastructure, and the remaking of public space"--

What makes this book of "spot the differences" puzzles so unique? Simply put: the quality of the photographs. Every one of the pictures comes from the acclaimed George Eastman House archive, with some dating back to the 1800s. So they make stunning art as well as absorbing brainteasers. In every case, you'll get two versions of the picture side by side; they'll look almost alike, but one is slightly different from the other. It's up to you to search the images and find the variations. The puzzles come in three levels of difficulty: easy with five differences, medium with six, and hard with seven. The photos encompass historical figures, famous buildings, stunning landscapes, and engaging animals and many are iconic works by renowned photographers. The most famous include "The Migrant Mother" by Dorothea Lange; Lewis W. Hine's "Power House Mechanic"; and the amazing portrait of Abraham Lincoln taken by the celebrated Civil War photographer Matthew Brady.

Moving away from Jacques Derrida's deconstructionism and Paul Ricoeur's hermeneutics, and building on his experiences as a politician, Vattimo asks if it is still possible to speak of moral imperatives, individual rights, and political freedom. Acknowledging the force of Nietzsche's "God is dead," Vattimo argues for a philosophy of pensiero debole or "weak thinking" that shows how moral values can exist without being guaranteed by an external authority. His secularising interpretation stresses anti-metaphysical elements and puts philosophy into a relationship with postmodern culture.

Mac OS X was released in March 2001, but many components, such as Mach and BSD, are considerably older. Understanding the design, implementation, and workings of Mac OS X requires examination of several technologies that differ in their age, origins, philosophies, and roles. Mac OS X Internals: A Systems Approach is the first book that dissects the internals of the system, presenting a detailed picture that grows incrementally as you read. For example, you will learn the roles of the firmware, the bootloader, the Mach and BSD kernel components (including the process, virtual memory, IPC, and file system layers), the object-oriented I/O Kit driver framework, user libraries, and other core pieces of software. You will learn how these pieces connect and work internally, where they originated, and how they evolved. The book also covers several key areas of the Intel-based Macintosh

computers. A solid understanding of system internals is immensely useful in design, development, and debugging for programmers of various skill levels. System programmers can use the book as a reference and to construct a better picture of how the core system works. Application programmers can gain a deeper understanding of how their applications interact with the system. System administrators and power users can use the book to harness the power of the rich environment offered by Mac OS X. Finally, members of the Windows, Linux, BSD, and other Unix communities will find the book valuable in comparing and contrasting Mac OS X with their respective systems. Mac OS X Internals focuses on the technical aspects of OS X and is so full of extremely useful information and programming examples that it will definitely become a mandatory tool for every Mac OS X programmer.

PROFINET is the first integrated Industrial Ethernet Standard for automation, and utilizes the advantages of Ethernet and TCP/IP for open communication from the corporate management level to the process itself. PROFINET CBA divides distributed, complex applications into autonomous units of manageable size. Existing fieldbuses such as PROFIBUS and AS-Interface can be integrated using so-called proxies. This permits separate and cross-vendor development, testing and commissioning of individual plant sections prior to the integration of the solution as

a whole. PROFINET IO, with its particularly fast real-time communication, fulfills all demands currently placed on the transmission of process data and enables easy integration of existing fieldbus systems. Isochronous real-time (IRT) is used for isochronous communication in motion control applications. PROFINET depends on established IT standards for network management and teleservice. Particularly to automation control engineering it offers a special security concept. Special industrial network technology consisting of active network components, cables and connection systems, together with recommendations for installation, complete the concept. This book serves as an introduction to PROFINET technology. Configuring engineers, commissioning engineers and technicians are given an overview of the concept and the fundamentals they need to solve PROFINET-based automation tasks. Technical relationships and practical applications are described using SIMATIC products as example.

Sartre and Foucault were two of the most prominent and at times mutually antagonistic philosophical figures of the twentieth century. And nowhere are the antithetical natures of their existentialist and poststructuralist philosophies more apparent than in their disparate approaches to historical understanding. A history,

thought Foucault, should be a kind of map, a comparative charting of structural transformations and displacements. But for Sartre, authentic historical understanding demanded a much more personal and committed narrative, a kind of interpretive diary of moral choices and risks compelled by critical necessity and an exacting reality. Sartre's history, a rational history of individual lives and their intrinsic social worlds, was in essence immersed in biography. In Volume One of this authoritative two-volume work, Thomas R. Flynn conducts a pivotal and comprehensive reconstruction of Sartrean historical theory, and provocatively anticipates the Foucauldian counterpoint to come in Volume Two.

Concepts are critical for the development and marketing of products and services. They constitute the blueprint for these products and services, albeit at the level of consumers rather than at the technical level. A good product concept can help make the product a success by guiding developers and advertising in the right direction. Yet, there is a dearth of both practical and scientific information about how to create and evaluate concepts. There has been little or no focus on establishing knowledge bases for concepts. Concept development is too often relegated to the so-called “fuzzy front end.” Concept Research in Food Product Design and Development remedies this inattention to product concepts by providing a unique treatment of concepts for the business professional as well as for research scientists. The book begins with simple principles of concepts, moves forward to methods for testing concepts, and then on to more substantive areas such as establishing validity, testing internationally and with children, creating databases, and selling in new methods for concept testing. The book combines a “how to” business book with a detailed treatment of the different facets of concept research. As such, the book represents a unique contribution to business applications in food, and consumer research methods. The book is positioned specifically for foods, to maintain a focus on a coherent set of topics. Concept Research in Food Product Design and Development appeals to a wide variety of audiences: R&D, marketing, sensory analysts, and universities alike. Corporate

R&D professionals will learn how to create strong concepts. Marketers will recognize how concepts are at the heart of their business. Sensory analysts will find the book a natural extension of their interest in product features. University students will understand how concept research is a critical part of the “consumer-connection.” Concept Research in Food Product Design and Development is the definitive, innovative text in describing how to create, analyze, and capitalize upon new product concepts.

A “cinematic . . . page-turner and a compassionate analysis of faith, memory, responsibility, and consequence.”—Molly Antopol, Fiction Writers Review Inspired by and structured around the chamber piece of the same title by the French composer Olivier Messiaen, *Quartet for the End of Time* is a mesmerizing story of four lives irrevocably linked in a single act of betrayal. The novel takes us on an unforgettable journey beginning during the 1930s Bonus Army riots, when World War I veteran Arthur Sinclair is falsely accused of conspiracy and then disappears. His absence will haunt his son, Douglas, as well as Alden and Sutton Kelly, the children of a powerful U.S. congressman, as they experience—each in different ways—the dynamic political social changes that took place leading up to and during World War II. From the New Deal projects through which Douglas, newly fatherless, makes his living to Sutton’s work as a journalist, to Alden’s life as a

code breaker and a spy, each character is haunted by the past and is searching for love, hope, and redemption in a world torn apart by chaos and war. Through the lives of these characters, as well as those of their lovers, friends, and enemies, the novel transports us from the Siberian Expedition of World War I to the underground world of a Soviet spy in the 1920s and 1930s, to the occultist circle of P. D. Ouspensky and London during the Blitz, to the German prison camp where Messiaen originally composed and performed his famous Quartet for the End of Time. At every turn, this rich and ambitious novel tells some of the less well-known stories of twentieth-century history with epic scope and astonishing power, revealing at every turn the ways in which history and memory tend to follow us, and in which absence has a palpable presence.

Kyle Ward's celebrated *History in the Making* struck a chord among readers of popular history. "Interesting and useful," according to Booklist, the book "convincingly illustrates how texts change as social and political attitudes evolve." With excerpts from history textbooks that span two hundred years, *History in the Making* looks at the different ways textbooks from different eras present the same historical events. *Not Written in Stone* offers an abridged and annotated version of *History in the Making* specifically designed for classroom use. In each section, Ward provides an overview, questions for discussions and analysis, and then a fascinating chronological sampling of textbook excerpts which reveal the fascinating differences between different textbooks over time. An exciting new teaching tool, *Not Written In Stone* is destined to become a touchstone of classroom teaching about the American past.

The preservation processes for foods have evolved over several centuries, but recent attention to non-thermal technologies suggests that a new dimension of change has been initiated. The new dimension to be emphasized is the emerging technologies for preservation of foods and the need for sound base of information to be developed as inputs for systematic process design. The focus of the work is on process design, and emphasizes the need for quantitative information as inputs to process design. The concepts presented build on the successful history of thermal processing of foods and use many examples from these types of preservation processes. Preservation of foods by refrigeration, freezing, concentration and dehydration are not addressed directly, but many of the concepts to be presented would apply. Significant attention is given to the fate of food quality attributes during the preservation process and the concept of optimizing process parameters to maximize the retention of food quality.
