Here is an in-depth examination of the opium poppy--the first medicinal plant known to mankind. In *Opium Poppy: Botany, Chemistry, and Pharmacology*, author L. D. Kapoor provides readers with a comprehensive resource on poppy production from seed to alkaloid. He explores the opium poppy's origin, distribution, chemistry, and uses and abuses from ancient civilizations through the present day. He covers plant and seed production and crop improvement and explores in detail the chemical and pharmaceutical by-products of the opium poppy. The book begins with a historical overview of the origin and use of opium poppy in ancient civilizations such as Greece, Egypt, and Mesopotamia. Chapters that follow contain detailed information on: botanical studies cytogenetics and plant breeding agronomy, including insect and pest control measures physiological and anatomical studies chemical and pharmacological aspects of opium alkaloids biosynthesis and physiology of opium alkaloids the occurrence and role of alkaloids in plants the evaluation of analgesic actions of morphine in various pain models in experimental animals *Opium Poppy: Botany, Chemistry, and Pharmacology* is a useful reference for professionals and students of pharmacy, botany, chemistry, medicine, and pharmacology who need a better overall understanding of this ancient plant and its (potential) modern usage.

Spaceflight is exciting again! Robotic space probes have recently explored the dwarf planets Ceres and Pluto; and a spacecraft has even landed on a comet. Commercial aerospace companies have successfully launched rockets to space and delivered cargo to the International Space Station. In the United States, new laws are being passed concerning the property rights on the Moon, and in anticipation of asteroid mining. In light of this surge in spaceflight activities, a basic appreciation of spaceflight issues would seem valuable to anyone wishing to better participate in discussions about this rapidly evolving scientific and technological field. This book is a college-level undergraduate textbook about spaceflight targeted at liberal arts students majoring in the humanities and the social sciences. It does not use calculus. The book would also be appropriate for readers with prior high-school knowledge of science and mathematics who have an interest in becoming more informed about spaceflight concepts and topics related to spaceflight.

Making Sense of World History is a comprehensive and accessible textbook that helps students understand the key themes of world history within a chronological framework stretching from ancient times to the present day. To lend coherence to its narrative, the book employs a set of organizing devices that connect times, places, and/or themes. This narrative is supported by: Flowcharts that show how phenomena within diverse broad themes interact in generating key processes and events in world history. A discussion of the common challenges faced by different types of agent, including rulers, merchants, farmers, and parents, and a comparison of how these challenges were addressed in different times and places. An exhaustive and balanced treatment of themes such as culture, politics, and economy, with an emphasis on interaction. Explicit attention to skill acquisition in organizing information, cultural sensitivity, comparison, visual literacy, integration, interrogating primary sources, and critical thinking. A focus on historical "episodes" that are carefully related to each other. Through the use of such devices, the book shows the cumulative effect of thematic interactions through time, communicates the many ways in which societies have influenced each other through history, and allows us to compare and contrast how they have reacted to similar challenges. They also allow the reader to transcend historical controversies and

can be used to stimulate class discussions and guide student assignments. With a unified authorial voice and offering a narrative from the ancient to the present, this is the go-to textbook for World History courses and students. Auto Repair For Dummies, 2nd Edition (9781119543619) was previously published as Auto Repair For Dummies, 2nd Edition (9780764599026). While this version features a new Dummies cover and design, the content is the same as the prior release and should not be considered a new or updated product. The top-selling auto repair guide--400,000 copies sold--now extensively reorganized and updated Forty-eight percent of U.S. households perform at least some automobile maintenance on their own, with women now accounting for one third of this \$34 billion automotive do-it-yourself market. For new or would-be do-it-yourself mechanics, this illustrated how-to guide has long been a must and now it's even better. A complete reorganization now puts relevant repair and maintenance information directly after each automotive system overview, making it much easier to find hands-on fix-it instructions. Author Deanna Sclar has updated systems and repair information throughout, eliminating discussions of carburetors and adding coverage of hybrid and alternative fuel vehicles. She's also revised schedules for tune-ups and oil changes, included driving tips that can save on maintenance and repair costs, and added new advice on troubleshooting problems and determining when to call in a professional mechanic. For anyone who wants to save money on car repairs and maintenance, this book is the place to start. Deanna Sclar (Long Beach, CA), an acclaimed auto repair expert and consumer advocate, has contributed to the Los Angeles Times and has been interviewed on the Today show, NBC Nightly News, and other television programs.

The DARPA Robotics Challenge was a robotics competition that took place in Pomona, California USA in June 2015. The competition was the culmination of 33 months of demanding work by 23 teams and required humanoid robots to perform challenging locomotion and manipulation tasks in a mock disaster site. The challenge was conceived as a response to the Japanese Fukushima nuclear disaster of March 2011. The Fukushima disaster was seen as an ideal candidate for robotic intervention since the risk of exposure to radiation prevented human responders from accessing the site. This volume, edited by Matthew Spenko, Stephen Buerger, and Karl Iagnemma, includes commentary by the organizers, overall analysis of the results, and documentation of the technical efforts of 15 competing teams. The book provides an important record of the successes and failures involved in the DARPA Robotics Challenge and provides guidance for future needs to be addressed by policy makers, funding agencies, and the robotics research community. Many of the papers in this volume were initially published in a series of special issues of the Journal of Field Robotics. We have proudly collected versions of those papers in this STAR volume.

Brought to Kenya from England as a child and then abandoned by her mother, Beryl is raised by both her father and the native Kipsigis tribe who share his estate. Her unconventional upbringing transforms Beryl into a bold young woman with a fierce love of all things wild and an inherent understanding of nature's delicate balance. But even the wild child must grow up, and when everything Beryl knows and trusts dissolves, she is catapulted into a string of disastrous relationships. Beryl forges her own path as a horse trainer, and her uncommon style attracts the eye of the Happy Valley set, a decadent, bohemian community of European expats who also live and love by their own set of rules. But it's the ruggedly charismatic Denys Finch Hatton who ultimately helps Beryl navigate the uncharted territory of her own heart. The intensity of their love reveals Beryl's truest self and her fate: to fly. Set against the majestic landscape of early-twentieth-century Africa, McLain's powerful tale reveals the extraordinary adventures of a woman before her time, the exhilaration of freedom and its cost, and the tenacity of the human spirit.

Bloodshot - The Official Movie Novelization

Like the instant classic *The Last American Man*, *Fearless* is the story of a remarkable individual who accepts no personal limits—including fear. Freya Hoffmeister, a forty-six-year-old former sky diver, gymnast, marksman, and Miss Germany contestant, left her twelve-year-old son behind to paddle alone and unsupported around Australia—a year-long adventure that virtually every expert guaranteed would get her killed. She planned not only to survive the 9,420-mile trip through huge, shark-infested seas, but to do it faster than the only other paddler who did it. As journalist and expert kayaker Joe Glickman details the voyage of this Teutonic force of nature, he captures interminable days on the water and nights camped out on deserted islands; hair-raising encounters with crocs and great white sharks; and the daring 300-mile open-ocean crossing that shaved three weeks off her trip. For 332 days Glickman followed Freya's journey on her blog—along with a far-flung audience of awestruck, even lovesick, groupies—as she took on one terrifying ordeal after the next. In the end, he says, “her vanity and pigheadedness paled next to her nearly superhuman ability to master fear and persevere.”

The DARPA Robotics Challenge Finals: Humanoid Robots To The Rescue

This book is devoted to the alkaline-saline lakes of East Africa, which include the world-famous "flamingo lakes". It covers the full range of issues, from the lakes' origin and history, life in and around these unique water bodies, to utilization, threats and management considerations. The authors, all of whom are leading international experts, summarize research done so far, highlight new and important findings, and provide future outlooks. The book is divided into three main sections: "Genesis, physics and chemistry" tackles lake development and the astounding physico-chemistry of the lakes. "Organisms and ecology" presents information about the many lake inhabitants, their interactions and adaptations to the extreme living conditions. "Utilization, management and perspectives" addresses threats such as lake exploitation and pollution, but also considers potential uses. This book will be particularly relevant to researchers and lecturers in the field of limnology and aquatic ecology, but is also designed to attract all those interested in nature and life on our planet.

Sport is an integral part of society, playing a key role in human health and well-being, and cultural, political and economic development. As sport is becoming more complex, competitive, diverse, and increasingly reliant on technology, HFE

theories, methods, and principles are progressively being applied to help understand and optimize sports systems. *Human Factors and Ergonomics in Sport: Applications and Future Directions* showcases the latest in sports HFE research and practice. Including contributions from both HFE and sports science researchers, it provides a collection of state-of-the-art studies, reviews and commentaries covering a diverse set of sports and sporting issues. "This book is an excellent resource for all academics and students in general. It provides updated theoretical foundations and applications that conceive a world where everything is connected and embedded in technology that allows us to capture, process and visualise actions and interactions, also at transdisciplinary levels." Professor Jaime Sampaio, Head of the Research Center in Sports Sciences, Health and Human Development (CIDESD), University of Trás-os-Montes e Alto Douro, Portugal "With the changing nature of work comes an ever-greater focus on leisure. Sport is a major dimension of this crucial form of human activity. Now comes Salmon and his colleagues who have assembled a panoply of world leaders who each provide their own individual perspectives on this intriguing world. Their emphasis on the human factors and ergonomics of these activities brings us new and exciting insights. A great read for the specialist and generalist alike." Professor Peter Hancock, Pegasus Professor, Provost Distinguished Research Professor and Trustee Chair, University of Central Florida, USA. "Finally, the complexity of sports and health is being considered in full. This book challenges contemporary thinking toward the prevention of injuries in sports, and provides tangible solutions to help our field into a new decade." Professor Evert Verhagen, Amsterdam Collaboration on Health and Safety in Sports & Department of Public and Occupational Health, VU University Medical Center

The Tongue and Quill has been a valued Air Force resource for decades and many Airmen from our Total Force of uniformed and civilian members have contributed their talents to various editions over the years. This revision is built upon the foundation of governing directives and user's inputs from the unit level all the way up to Headquarters Air Force. A small team of Total Force Airmen from the Air University, the United States Air Force Academy, Headquarters Air Education and Training Command (AETC), the Air Force Reserve Command (AFRC), Air National Guard (ANG), and Headquarters Air Force compiled inputs from the field and rebuilt The Tongue and Quill to meet the needs of today's Airmen. The team put many hours into this effort over a span of almost two years to improve the content, relevance, and organization of material throughout this handbook. As the final files go to press it is the desire of The Tongue and Quill team to say thank you to every Airman who assisted in making this edition better; you have our sincere appreciation!
