The advancement of a scientific discipline depends not only on the "big heroes" of a discipline, but also on a community's ability to reflect on what has been done in the past and what should be done in the future. This volume combines perspectives on both. It celebrates the merits of Michael Otte as one of the most important founding fathers of mathematics education by bringing together all the new and fascinating perspectives, created through his career as a bridge builder in the field of interdisciplinary research and cooperation. The perspectives elaborated here are for the greatest part motivated by the impressive variety of Otte's thoughts; however, the idea is not to look back, but to find out where the research agenda might lead us in the future. This volume provides new sources of knowledge based on Michael Otte's fundamental insight that understanding the problems of mathematics education – how to teach, how to learn, how to communicate, how to do, and how to represent mathematics – depends on means, mainly philosophical and semiotic, that have to be created first of all, and to be reflected from the perspectives of a multitude of diverse disciplines.

A few years after Austria's disastrous defeat in the First World War, Vienna, a city hardly known for intellectual fervor or serious discourse, suddenly emerged as a mecca for psychology. This is the first book to present that history within the context of the political and social events of the time. Sigmund Freud, Alfred Adler, Otto Rank, Karl Buhler, Erik Erikson, and Helene Deutsch were among the hundreds of famous psychologists who lived and established training centers in Vienna. Momentous historical events forced the emigration of the majority of Vienna's leading psychologists, who, largely Socialist and Jewish, emigrated when Austria was "annexed" by Germany, abruptly ending the Golden Age.

Three tasks direct the author's work: to establish from available sources the circumstances in life, the mental development, and the doctrines of individual philosophers; to reconstruct from these facts the "genetic" process, so that the effect of these factors upon each philosopher's doctrine can be determined; to determine the overall value in the history of philosophy of the doctrines considering their origin.
