United States Air Force

The privilege of commanding an Air Force squadron, despite its heavy responsibilities and unrelenting challenges, represents for many Air Force officers the high point of their careers. It is service as a squadron commander that accords true command authority for the first time. The authority, used consistently and wisely, provides a foundation for command. As with the officer's commission itself, command authority is granted to those who have earned it, both by performance and a revealed capacity for the demands of total responsibility. But once granted, it must be revalidated every day. So as one assumes squadron command, bringing years of experience and proven record to join with this new authority, one might still need a little practical help to succeed with the tasks of command. This book offers such help. "Commanding an Air Force Squadron" brings unique and welcome material to a subject other books have addressed. It is rich in practical, useful, down-to-earth advice from officers who have recently experienced squadron command. The author does not quote regulations, parrot doctrine, or paraphrase the abstractions that lace the pages of so many books about leadership. Nor does he puff throughout the manuscript about how he did it. Rather, he presents a digest of practical wisdom based on real-world experience drawn from the reflection of many former commanders from any different types of units. He addresses all Air Force squadron commanders, rated and nonrated, in all sorts of missions worldwide. Please also see a follow up to this book entitled "Commanding

The Guide to Military Installations

The Air Force Officer's Guide

The purpose of this book is to provide a military reference source concentrating primarily on U.S. Army designs where most shoulder sleeve insignia originated. However, we have incorporated some of the most popular U.S. Navy and U.S. Marine Corps designs that will be encountered. Keep in mind that in 1947 with the advent of the realignment of the armed services, several major changes occurred. The U.S. Air Force was created and separated from Army control to become an independent entity and the U.S. Marine Corps ceased wearing patches on uniforms. Also includes a section of "Unofficially Authorized" patches prevalent in the U.S. Marine Corps.

In response to a tasking from the Air Force chief of staff, the Air Force Research Institute conducted a review of how the service organizes, educates/trains, and equips its cyber workforce. The resulting findings were used to develop recommendations for how the Air Force should recruit, educate, train, and develop cyber operators from the time they are potential accessions until they become senior leaders in the enlisted and officer corps. This study's discoveries, analyses, and recommendations are aimed at guiding staff officers and senior leaders alike as they consider how to develop a future cyber workforce that supports both Air Force and US Cyber Command missions across the range of military operations.

The Human Side of Cyber Conflict

For more than a half century, the Guide to the Evaluation of Education Experiences in the Armed Services has been the standard reference work for recognizing learning acquired in military life. Since 1942, ACE and has worked cooperatively with the US Department of Defense, the Armed Services, and the US Coast Guard in helping hundreds of thousands of individuals earn academic credit for learning achieved while serving their country.

Commanding an Air Force Squadron

A first of its kind, this book-of, by, and for the noncommissioned officer and petty officer-is a comprehensive explanation of the enlisted leader across the U.S. Armed Services. It complements The Armed Forces Officer, the latest edition of which was published by NDU Press in 2007, as well as the Services' NCO/PO manuals and handbooks. Written by a team of Active, Reserve, and retired senior enlisted leaders from all Service branches, this book defines and describes how NCOs/POs fit into an organization, centers them in the Profession of Arms, explains their dual roles of complementing the officer and enabling the force, and exposes their international engagement. As Chairman of the Joint Chiefs of Staff General Martin E. Dempsey writes in his foreword to the book, "We know noncommissioned officers and petty officers to have exceptional competence, professional character, and soldierly grit-they are exemplars of our Profession of Arms." Aspirational and fulfilling, this book helps prepare young men and women who strive to become NCOs/POs, re-inspires serving enlisted leaders, and stimulates reflection by those who have retired from or left active service. It also gives those who have never worn the uniform a better understanding of who these exceptional men and women are, and why they are properly known as the "Backbone of the Armed Forces."

Air Force Handbook 1: The Airman Handbook

Since the first heady months of the war in Iraq when President Bush celebrated aboard the USS Abraham Lincoln under a mission accomplished sign, US forces have been bogged down in a frustrating war of attrition against a largely unseen insurgency that attacks with ambushes and roadside bombs. In this revealing insider's look at the US intelligence community's efforts to fight the insurgency, author Steven K. O'Hern, who served in Iraq in 2005 as a senior intelligence officer, offers a critical assessment of our intelligence failures and suggests ways of improving our ability to fight an often elusive enemy. O'Hern criticizes America's military leaders for being enamored with high-technology solutions for all situations, including intelligence operations. Essentially, we are still relying on an intelligence system that was designed to beat the Soviet army. But with no troop formations or supply depots to spot by satellite and no radio signals to intercept, insurgent tactics significantly reduce the US military's technological advantage. Using examples from human source operations conducted in Iraq, this book explains why human intelligence-not technology-is the key to defeating an insurgency and why the US is so poor at using what the military calls

HUMINT. O'Hern also cites internal structural problems that work against effective intelligence operations. The intelligence community is actually a collection of organizations usually more interested in protecting turf than sharing information. The author gives examples of missed opportunities that resulted from information being caught in stovepipes and red tape. He shows how front-line units and intelligence officers developed ways to work around the intelligence bureaucracy in order to succeed. Due to these problems and others, O'Hern notes that US intelligence has failed to spot emerging threats, such as Iran's involvement in Iraq. In conclusion, he cautions that these unresolved problems will continue to affect the United States in any future conflict against an insurgency.

Steven K. O'Hern (Overland Park, KS) was director of the Strategic Counterintelligence Directorate of the Multi-National Force in Baghdad, Iraq, from April to September 2005. He is also a retired air force colonel, who served as a special investigations and counterintelligence officer and commanded units of the Air Force Office of Special Investigations at bases in Minnesota, Georgia, Oklahoma, and South Korea. Currently, he is vice president for Group Legal of Swiss Re, the world's largest reinsurer.

Air Force Handbook 1, Airman

The relationship between military leaders and political leaders has always been a complicated one, especially in times of war. When the chips are down, who should run the show -- the politicians or the generals? In *Supreme Command*, Eliot Cohen examines four great democratic war statesmen -- Abraham Lincoln, Georges Clemenceau, Winston Churchill, and David Ben-Gurion -- to reveal the surprising answer: the politicians. Great statesmen do not turn their wars over to their generals, and then stay out of their way. Great statesmen make better generals of their generals. They question and drive their military men, and at key times they overrule their advice. The generals may think they know how to win, but the statesmen are the ones who see the big picture. Lincoln, Clemenceau, Churchill, and Ben-Gurion led four very different kinds of democracy, under the most difficult circumstances imaginable. They came from four very different backgrounds -- backwoods lawyer, dueling French doctor, rogue aristocrat, and impoverished

Jewish socialist. Yet they faced similar challenges, not least the possibility that their conduct of the war could bring about their fall from power. Each exhibited mastery of detail and fascination with technology. All four were great learners, who studied war as if it were their own profession, and in many ways mastered it as well as did their generals. All found themselves locked in conflict with military men. All four triumphed. Military men often dismiss politicians as meddlers, doves, or naifs. Yet military men make mistakes. The art of a great leader is to push his subordinates to achieve great things. The lessons of the book apply not just to President Bush and other world leaders in the war on terrorism, but to anyone who faces extreme adversity at the head of a free organization -- including leaders and managers throughout the corporate world. The lessons of Supreme Command will be immediately apparent to all managers and leaders, as well as students of history.

"Jeffrey Smith updates the earlier release of Col Timothy T. Timmon's *Commanding an Air Force Squadron* (1993). In this book, which includes a foreword by Gen John P. Jumper and an introduction by Colonel Timmons, USAF, retired, Colonel Smith relies on the vast "insights, experiences, and recommendations" of former and

current commanders to identify the attributes of a successful commander at multiple levels. He identifies some issues commanders face regardless of the level of command, including counseling personnel, dorm inspections, commanders' calls, money management, and the roles of spouses and families. According to Colonel Smith, the conduct of individuals in times of crises is the truest barometer of a good commander."--Publisher website.
