This book analyzes the law and policy for the management of global common resources. As competing demands on the global commons are increasing, the protection of environment and the pursuit of growth give rise to all sorts of conflicts. It also analyzes issues in the protection of the global commons from a fairness, effectiveness and world order perspective. The author examines whether policymaking and trends point to a fair allocation of global common resources that is effective in protecting the environment and the pursuit of sustainable development. The author looks at the cost-effectiveness of international environmental law and applies theories of national environmental law to international environmental problems. Chapters include analysis on areas such as marine pollution, air pollution, fisheries management, transboundary water resources, biodiversity, hazardous and radioactive waste management, state responsibility and liability.

Integrating legal theory with practice in a most unusual way, this user-friendly text uses an intriguing story line to engage students. Workshops take users through the steps of preparing a case for trial - from drawing up pleadings and motions to computing time. "Putting It Into Practice" questions appear throughout each chapter, challenging students to apply each concept as they read along. Significant emphasis is placed on local and state rules and the text provides space for students to write in the rules and procedures that apply to them. Users are encouraged to create a "forms file" so they have a notebook of forms they can take with them to their first job. Other pedagogical tools include "Procedural Ponderables" that challenge students to think beyond the rules, "Litigation Lingo and Logistics" that provides hypotheticals and interesting exercises, and "Techno Tips" that introduce readers to helpful computer programs, formatting, and other technical issues.**ALSO AVAILABLECOMING SOON**West Paralegal Comprehensive CTB-2000-II, ISBN: 0-7668-1773-3

Markets in Profile explores the confluence of three disparate philosophical frameworks: the Market Profile, behavioral finance, and neuroeconomics in order to present a unified theory of how markets work. The Market Profile is an ever-evolving, multidimensional graphic that gives visual form to the market's continuing auction process, revealing the myriad underlying dynamics that influence market activity. Behavioral finance posits that investors are driven more by emotional factors and the subjective interpretation of minutia than by "rationality" when making investment decisions. And neuroeconomics is the study of how investor psychology permeates and affects the financial markets. Mr. Dalton explicates the ways in which irrational human behavior influences the market's natural auction process, creating frequently predictable market structure, which results in opportunities for investors to ameliorate risk. The book will improve investors ability to interpret change in markets, enabling better, more confident investment decisions.
