## Designing with Light

Veteran camera assistant Doug Hart describes in this comprehensive technical guide all of the important facets and duties of the first and second camera assistants' jobs. Whether it is feature films, episodic television, documentaries, commercials, or music videos, *The Camera Assistant: A Complete Professional Handbook* explains both the practice and theory behind it with a concentration on technique rather than equipment. In addition, personal anecdotes from the author's years behind and beside the camera provide insight into this demanding field. Key topics include film formats and aspect ratios, testing lenses and camera equipment, focus theory, film loading and labeling, scene blocking, marking actors, shooting tips, slating, paperwork, equipment maintenance, set etiquette, and finding work. This is not a camera equipment handbook; it is a comprehensive procedures manual which describes and explains the most important responsibilities of the camera assistant on the set, the theory behind the practice, and the methods that get the job done properly and keep the assistant frequently employed. Douglas C. Hart has been a freelance first-camera assistant on feature films, documentaries, television shows, and commercials for more than 20 years, including 10 years (and 10 films) as first-camera assistant to Gordon Willis, ASC, as well as work in 42 states and 26 foreign countries. His work includes *Presumed Innocent*, *Hannah and Her Sisters*, *The Cosby Mysteries*, and CBS's *Central Park West*. He is a member and former president of the International

## **Cinematography: Theory and Practice**

We can't shoot good pictures without good lighting, no matter how good the newest cameras are. Shooting under available light gives exposure, but lacks depth, contrast, contour, atmosphere and often separation. The story could be the greatest in the world, but if the lighting is poor viewers will assume it's amateurish and not take it seriously. Feature films and TV shows, commercials and industrial videos, reality TV and documentaries, even event and wedding videos tell stories. Good lighting can make them look real, while real lighting often makes them look fake. Lighting for Cinematography, the first volume in the new CineTech Guides to the Film Crafts series, is the indispensable guide for film and video lighting. Written by veteran gaffer and cinematographer David Landau, the book helps the reader create lighting that supports the emotional moment of the scene, contributes to the atmosphere of the story and augments an artistic style. Structured to mimic a 14 week semester, the chapters cover such things as lighting for movement, working with windows, night lighting, lighting the three plains of action and non-fiction lighting. Every chapter includes stills, lighting diagrams and key advice from professionals in the field, as well as lighting exercises to help the reader put into practice what was covered.

The world of cinematography has changed more in the last few years than it has since it has in 1929, when sound recording was introduced. New technology, new tools and new methods have revolutionized the art and craft of telling stories visually. While some aspects of visual language, lighting and color are eternal, shooting methods, workflow and cameras have changed radically. Even experienced film artists have a need to update and review new methods and equipment. These changes affect not only the director of photography but also the director, the camera assistants, gaffers, and digital imaging technicians. *Cinematography: Theory and Practice* covers both the artistry and craftsmanship of cinematography and visual storytelling. Few art forms are as tied to their tools and technology as is cinematography. Take your mastery of these new tools, techniques, and roles to the next level with this cutting-edge roadmap from author and filmmaker Blain Brown. The forensic photographer, or more specifically the crime scene photographer, must know how to create an acceptable image that is capable of withstanding challenges in court. This book blends the practical functions of crime scene processing with theories of photography to guide the reader in acquiring the skills, knowledge and ability to render reliable evidence. Required reading by the IAI Crime Scene Certification Board for all levels of certification. Contains over 500 photographs. Covers the concepts and principles of photography as well as the "how to" of creating a final product. Includes end-of-chapter exercises.
