compassionate treatment in malignant and non-malignant blood disorders, hemostasis and thrombosis, hematopoietic stem cell transplantation and cellular therapeutics, and solid tumor oncology.

Doppler ultrasound: principles and practice

Patient Blood Management (PBM) is a multidisciplinary, evidence-based approach to optimising the care of patients who might need a blood transfusion. PBM follows a number of international and national initiatives over the past 20 years supporting the safe and appropriate use of blood. It was launched in England in June 2012; experts and

Iron infusion - health.vic

Guiding principles for iron. This guide is designed to fill a gap in publicly available resources relating to iron infusion management. This gap was identified during consultation with health services regarding the implementation of the National Blood Authority's Patient Blood Management work plan and, in particular, the management of anaemia.

Doppler Ultrasound - Principles and practice

Whole blood (WB) is human blood from a standard blood donation. It is used in the treatment of massive bleeding, in exchange transfusion, and when people donate blood to themselves. One unit of whole blood (~517 mls) brings up hemoglobin levels by about 10 g/L. Cross matching is typically done before the blood is given. It is given by injection into a vein.

Good manufacturing practice - an overview | Therapeutic

Measurement of blood pressure is an important diagnostic and monitoring procedure. This article, the first in a two-part series, discusses the principles of blood pressure measurement; it was originally an early online publication and was updated on 22/06/2020

Welcome to the Transfusion Handbook

Blood plasma is a yellowish liquid component of blood that holds the blood cells of whole blood in suspension. It is the liquid part of the blood that carries cells and proteins throughout the body. It makes up about 55% of the body's total blood volume. It is the intravascular fluid part of extracellular fluid (all body fluid outside cells). It is mostly water (up to 95% by volume), and
