The authors start the book with overviews of the understanding and management of atopic dermatitis in conventional and Chinese medicine. They then review how atopic dermatitis was treated with herbal medicine and other Chinese medicine therapies in past eras, and highlight the treatments that continue to be used in contemporary clinical practice. The authors use evidence-based medicine principles and scientific techniques to review the current state of evidence from clinical studies of Chinese herbal medicine, acupuncture, and combinations of these therapies. Attention is given to studies evaluating these therapies used as an adjunct to conventional treatments. The authors summarise the results of analyses

of clinical outcomes and discuss their implications for clinical practice of Chinese medicine and for future research. This book will inform clinicians and students of Chinese and integrative medicine of the current state of evidence from contemporary and traditional sources. Clinicians can refer to the herbal formulas and acupuncture treatments described in this book to make evidence-based decisions in patient care. The following features mark the importance of this book in the field:

### **Maggot Therapy**

The first text on bloodletting therapy for Western practitioners of Chinese medicine, this authoritative text explores the theory and function of bloodletting, and provides detailed instruction on its clinical use. Bloodletting therapy, which works to remove internal and external disruptions to the system through the withdrawal of small quantities of blood, has numerous benefits, especially concerning the treatment of complex or chronic disease. Yet the technique is often met with alarm in the West and side-lined in favour of less controversial treatments such as fine-needle acupuncture, and moxibustion. This book provides a concise overview of its theory, historical and contemporary relevance, and clinical guidance. With detailed reference to the classic texts, the author clarifies the fundamental Chinese medical theory related to blood and the network vessels, and provides an in-depth discussion of the benefits of and practice guidelines for

bloodletting. The book includes a chapter on the classical acupuncture techniques of Tung Ching Chang whose work is attracting increasing attention in the West. Through the exploration of classic texts and contemporary standards, the book provides everything needed to gain a comprehensive understanding of the technique and to encourage its use as a viable treatment option in the West. It will be an invaluable addition to the resources available for acupuncturists, as well as students and practitioners of Chinese medicine more generally, including those interested in all Chinese approaches to health.

Evidence-based Clinical Chinese Medicine provides a 'whole evidence' analysis of the Chinese medicine management of herpes zoster and post-herpetic neuralgia. Evidence from the classical Chinese medicine literature, contemporary clinical literature, the outcomes of clinical trials and experimental studies are reviewed, analysed and synthesised. The data from all these sources are condensed to provide evidence-based statements which will inform clinical practice and guide future research. This book has been designed to be an easy reference at the point of care. During a patient consultation, Chinese medicine practitioners can refer to this book for guidance on which Chinese herbal medicine formulas, specific herbs, or acupuncture points, can best treat their patient, and be confident there is evidence which supports its use. Currently, Chinese medicine practitioners who develop a special interest in a particular health condition such as herpes zoster and its common sequelae post-herpetic neuralgia have to consult a variety of sources to further their knowledge. Typically, they use the contemporary clinical literature to understand the theory, aetiology, pathogenesis and obtain expert opinions on the Chinese medicine management of herpes zoster and post-herpetic neuralgia. They search the electronic literature to identify systematic reviews of

clinical trials, if any exist, to obtain assessments of the current state of the clinical evidence for particular interventions. If they have the skills and resources, they may search the classical Chinese medicine literature for an historical perspective on treatments that have stood the test of time. This book provides all of this information for practitioners in one handy, easy to use reference. This allows practitioners to focus on their job of providing high quality health care, with the knowledge it is based on the best available evidence.

The Essentials of Chinese Medicine is a text book intended for international students who wish to gain a basic understanding of Chinese Medicine (CM) at the university level. The idea of writing such a text was originated from the Sino-American Consortium for the Advancement of Chinese Medicine (SACACM), which was founded in February 2000. In 1995, the British Hong Kong Administration set up a Preparatory Committee for the Development of Chinese Medicine to look into ways of bringing Chinese medical practice and herbal trade under proper control and regulation. After the reunification of Hong Kong with mainland China in 1997, the Government of the Hong Kong Special Administrative Region continued the efforts to uplift the practice of CM to a fully professional level through legislation. To help bring up a new generation of professional CM practitioners, the Hong Kong Baptist University (HKBU) obtained approval from the Government's university funding authority to develop a School of Chinese Medicine to prepare students who

will meet the future professional requirements through public examinations. In order to establish itself quickly as a rigorous provider of university level CM education, HKBU sought alliance with eight major CM universities in the Chinese Mainland, and one US university which was interested in developing CM education within its medical college. As a result, the Consortium known as SACACM was formed, with ten founding institutions from Beijing, Shanghai, Nanjing, Shandong, Guangzhou, Chengdu, Heilongjiang, Hong Kong, and the United States.

In classical Chinese medicine, the ear is considered an extraordinarily powerful nexus of energy through which the entire body can be treated. Unlike numerous texts that apply Western approaches to Eastern medicine, Chinese Auricular Acupuncture explains ear acupuncture within the framework of traditional Oriental energetics consistent with the use of the medicine. Written by an esteemed practitioner and teacher of auricular acupuncture, this modern, user-friendly guide

provides students and practitioners with a concise manual on ear acupuncture. High-quality photos illustrate common ear pathology and include instruction on diagnosis. The text features Chinese clinical energetics of ear acupoints interfaced with the most common diagnostic paradigms. It also contains a detailed discussion of how to construct prescriptions tailored to the patient rather than the disease process. This unique book simplifies the art of auricular acupuncture by relying solely on the traditional Chinese ear map rather than a set of complex charts and systems. This approach explains the practical utilization of auricular therapy in a manner that is memorable, clinically useful, and based on the underpinnings of an education in traditional Chinese medicine.
