Geriatric Physical Therapy

Finalist for the Pulitzer Prize in General Nonfiction A New York Times Bestseller Longlisted for the Andrew Carnegie Medal for Excellence in Nonfiction Winner of the WSU AOS Bonner Book Award As revelatory as Atul Gawande's *Being Mortal*, physician and award-winning author Louise Aronson's *Elderhood* is an essential, empathetic look at a vital but often disparaged stage of life. For more than 5,000 years, "old" has been defined as beginning between the ages of 60 and 70. That means most people alive today will spend more years in elderhood than in childhood, and many will be elders for 40 years or more. Yet at the very moment that humans are living longer than ever before, we've made old age into a disease, a condition to be dreaded, denigrated, neglected, and denied. Reminiscent of Oliver Sacks, noted Harvard-trained geriatrician Louise Aronson uses stories from her quarter century of caring for patients, and draws from history, science, literature, popular culture, and her own life to weave a vision of old age that's neither nightmare nor utopian fantasy--a vision full of joy, wonder, frustration, outrage, and hope about aging, medicine, and humanity itself. *Elderhood* is for anyone who is, in the author's own words, "an aging, i.e., still-breathing human being."

CURRENT Diagnosis and Treatment Surgery: Thirteenth Edition

Integrative geriatrics is a new field of medicine that advocates for a whole-person, patient-centered, primarily non-pharmacological approach to medical care of the elderly. Most current geriatric practices overprescribe medications and procedures and underutilize non-pharmacological, low-cost, high-touch methods. Patients, however, often show reluctance towards these standard practices, as the interventions they rely upon are often invasive. The practice of integrative geriatrics is rooted in lifestyle interventions, such as nutrition, movement therapies, and mind-body and spirituality approaches, that allow patients to have different path to their healthcare-one that utilizes pharmaceuticals and invasive procedures only when safer integrative approaches are not available or not effective. This first definitive textbook of this new field presents detailed, evidence-based information for all healthcare providers and advocates who work with geriatric population. It is intended not only for providers in outpatient settings, but also to those who work in nursing homes, assisted and independent living facilities, and senior community centers.
