Problems and Solutions in Structural Geology and Tectonics, Volume 5, in the series Developments in Structural Geology and Tectonics, presents students, researchers and practitioners with an all-new set of problems and solutions that structural geologists and tectonics researchers commonly face. Topics covered include ductile deformation (such as strain analyses), brittle deformation (such as rock fracturing), brittle-ductile deformation, collisional and shortening tectonics, thrust-related exercises, rift and extensional tectonics, strike slip tectonics, and cross-section balancing exercises. The book provides a how-to guide for students of structural geology and geologists working in the oil, gas and mining industries. Provides practical solutions to industry-related issues, such as well bore stability. Allows for self-study and includes background information and explanation of

research and industry jargon Includes full color diagrams to explain 3D issues

Now in its eighth edition, Higher Engineering Mathematics has helped thousands of students succeed in their exams. Theory is kept to a minimum, with the emphasis firmly placed on problem-solving skills, making this a thoroughly practical introduction to the advanced engineering mathematics that students need to master. The extensive and thorough topic coverage makes this an ideal text for

upper-level vocational courses and for undergraduate degree courses. It is also supported by a fully updated companion website with resources for both students and lecturers. It has full solutions to all 2,000 further questions contained in the 277 practice exercises.

Mystery Entwined with Supernatural““This is an Indian Army List of three years back,’ he explained, ‘and here is the very gentleman we want - 'Heatherstone, J. B., Commander of the Bath,' my dears, and 'V.C.', think of that, 'V.C. '--'formerly colonel in the Indian Infantry, 41st Bengal Foot, but now retired with the rank of major-general.' In this other column is a record of his services --'capture of Ghuznee and defense of Jellalabad, Sobraon 1848, Indian Mutiny and reduction of Oudh. Five times mentioned in dispatches.' I think, my dears, that we have cause to be proud of our new neighbour.” - Arthur Conan Doyle, The Mystery of Cloomber For many years uninhabited, the remote Cloomber Hall becomes the residence of General Heatherstone and his family. Surprisingly, the General avoids any human interactions and forbids his family to leave their new home. What is he hiding? ,This book has been professionally formatted for e-readers and contains a bonus book club leadership guide and discussion questions. We hope you'll share this book with your friends, neighbors and colleagues and can't wait to hear what you have to say about it.

Building and Delivering Sustainability Solutions: Insights, Methods, and Case-Studies

E&G - Quaternary Science Journal Vol. 58 No 2

Sustaining ecosystems to deliver what people need and value, while mitigating and adapting to global climate change and extreme event impacts, presents a complex set of environmental, economic, and social challenges in ensuring resilient and sustainable food production. The Climate Smart Landscape (CSL) approach has emerged as an integrated management strategy to address the increasing pressures on agricultural production, ecosystem conservation, rural livelihoods, climate change mitigation and adaptation. Deploying cheaper, more accurate, and efficient technology enables the harnessing of big data for use in solving sustainability challenges. With improved integrated analytical frameworks, statistical approaches, spatially- explicit models and indices, the CSL approach can be further developed and applied for more resilient, productive, and sustainable ecosystems. This eBook brings together original research, review, hypothesis, theory, and technology report articles, involving 87 authors from 9 countries across Asia, Europe, and North America. These articles present new methodological and technological innovation, findings, and insights across four themes: (1) landscape productivity and crop suitability, (2) variable crop requirements for water and nutrients, (3) crop health status, phenology, and phenotyping, and (4) crop disease assessment and prediction under integrated pest management (IPM).
