How and why do changes happen when and where they do? Is it possible to explain changes that occurred centuries ago? These are the central questions addressed in this book, in which the author argues that the development of numerous features of medieval (and modern) Spanish can best be explained as the results of koineization, a process in which mixing among speakers of different dialects leads to the rapid formation of a new mixed and generally simplified variety. The book

includes a complete introduction to koineization and detailed study of three stages of dialect mixing in medieval Spanish.

Diploma in Dental Nursing, Level 3 is the new edition of the must-have study companion for trainee dental nurses preparing for the City & Guilds Level 3 Diploma in Dental Nursing (formerly NVQ). The book offers comprehensive support on the units assessed by portfolio - from first aid and health and safety to specific chairside support procedures - as well as the four areas of the course tested by multiple choice questions: infection control, oral health assessment, dental radiography and oral health management. This third edition of an established revision text has been substantially revised and restructured in line with the new qualification and reflects changes in the regulations and legislature affecting dentistry and dental workplaces, all of which have an effect on the daily role and working life of the dental nurse. It will be an invaluable guide for dental nurse trainees, qualified dental nurses and course providers. - Expanded and revised, with extensive coverage of the fifteen Diploma units - In full colour throughout with

In the past decade, few subjects at the intersection of medicine and sports have generated as much public interest as sports-related concussions - especially among youth. Despite growing awareness of sports-related concussions and

campaigns to educate athletes, coaches, physicians, and parents of young athletes about concussion recognition and management, confusion and controversy persist in many areas. Currently, diagnosis is based primarily on the symptoms reported by the individual rather than on objective diagnostic markers, and there is little empirical evidence for the optimal degree and duration of physical rest needed to promote recovery or the best timing and approach for returning to full physical activity. Sports-Related Concussions in Youth: Improving the Science, Changing the Culture reviews the science of sports-related concussions in youth from elementary school through young adulthood, as well as in military personnel and their dependents. This report recommends actions that can be taken by a range of audiences - including research funding agencies, legislatures, state and school superintendents and athletic directors, military organizations, and equipment manufacturers, as well as youth who participate in sports and their parents - to improve what is known about concussions and to reduce their occurrence. Sports-Related Concussions in Youth finds that while some studies provide useful information, much remains unknown about the extent of concussions in youth; how to diagnose, manage, and prevent concussions; and the short- and long-term consequences of concussions as well as repetitive head impacts that do not result in concussion symptoms. The culture of sports negatively influences athletes' self-reporting of concussion symptoms and their adherence to return-to-play guidance. Athletes, their teammates, and, in some cases, coaches and parents may not fully appreciate the health threats posed by concussions. Similarly, military recruits are

immersed in a culture that includes devotion to duty and service before self, and the critical nature of concussions may often go unheeded. According to Sports-Related Concussions in Youth, if the youth sports community can adopt the belief that concussions are serious injuries and emphasize care for players with concussions until they are fully recovered, then the culture in which these athletes perform and compete will become much safer. Improving understanding of the extent, causes, effects, and prevention of sports-related concussions is vitally important for the health and well-being of youth athletes. The findings and recommendations in this report set a direction for research to reach this goal.
