As the importance and dependence of specific mineral commodities increase, so does concern about their supply. The United States is currently 100 percent reliant on foreign sources for 20 mineral commodities and imports the majority of its supply of more than 50 mineral commodities. Mineral commodities that have important uses and face potential supply disruption are critical to American economic and national security. However, a mineral commodity's importance and the nature of its supply chain can change with time; a mineral commodity that may not have been considered critical 25 years ago may be critical today, and one considered critical today may not be so in the future. The U.S. Geological Survey has produced this volume to describe a select group of mineral

commodities currently critical to our economy and security. For each mineral commodity covered, the authors provide a comprehensive look at (1) the commodity's use; (2) the geology and global distribution of the mineral deposit types that account for the present and possible future supply of the commodity; (3) the current status of production, reserves, and resources in the United States and globally; and (4) environmental considerations related to the commodity's production from different types of mineral deposits. The volume describes U.S. critical mineral resources in a global context, for no country can be self-sufficient for all its mineral commodity needs, and the United States will always rely on global mineral commodity supply chains. This volume provides the scientific understanding of critical mineral resources required for informed decisionmaking by those responsible for ensuring that the United States has a secure and sustainable supply of mineral commodities.

The world has changed and so too has investing. The market is shell shocked and yesterday's momentum stocks are today's slow-motion stocks. But in the new reality of low-growth investing, commodities are hot and getting hotter. A rapidly industrializing and urbanizing Asia will be demanding lots more copper, zinc, iron ore, coal, fertilizers, gold and oil to transform their societies. Commodities are it and that's great news for investors who want to profit from the next great bull market in commodities. In

fact, commodities may be about the only asset class that is likely to outperform the broad market in the future. Although they are without a doubt important to the global economy, commodities are among the most misunderstood of all asset classes. Stocks, bonds and real estate all have legions of followers and plenty of experts agree on their importance within an investment portfolio, but venture into the world of commodities and you are into an area that's intimidating to the average investor, where suspicions run deep and understanding is limited. As a result, commodities get short-shrift in most investment accounts and investors miss out on some important opportunities. The Little Book of Commodity Investing is an indispensable guide to learning the ins and outs of commodity investing. It's about identifying opportunities to profit from the coming bull market in commodities. It explains the benefits of commodities as part of a well diversified investment portfolio; covers all of the major commodities markets; what makes commodities and the companies that produce them tick; why commodities sometimes zig and then zag; what to buy and when to buy it; and why commodities are the next big thing. Today's world is a very different world-a world where an understanding of commodities is a prerequisite for investment success. And The Little Book of Commodity Investing is the roadmap you need to discover where the opportunities of the future lie, and what to do about it.

Suffering and Smiling is an examination of the myriad challenges of impoverishment facing Africa and Africans in the new millennium. Selected African states and institutions are examined using the patient-physician relationship and the various systems of the human body as models. The major diseases and maladies and the impact of HIV/AIDS are examined as well as the challenges to the continent's cardiovascular system (educational), nutritional needs (food and nutrition), skeletal system (infrastructure), respiratory system (resource use), and autoimmune system (police and military systems). The Democratic Republic of Congo, Kenya, Liberia, Nigeria, Rwanda, Uganda, Sierra Leone, South Africa, Uganda, and Zimbabwe are individually diagnosed.

understood major war. Since 1996 successive waves of armed conflict in the Congo have left behind at least 3 million casualties, overwhelmingly civilian. Turner throws new light on partisan and economically self-interested military interventions by Uganda, Angola, Zimbabwe and Namibia. And he cuts through the highly tendentious historical myths that have been used to make sense of the unfolding catastrophe both in the region and beyond. The book also indicates the changes required of the international community, neighboring African states and Congolese political leaders if this hugely resource-rich region of Central Africa is to build peace and economic security for its people.

The copper-cobalt outcrops of Upper Katanga and north-western Zambia host a particular flora which comprises an estimated 750 species of which more than 400 are treated in this copper-cobalt field guide. The aim of this book, resulting from several years of

intensive field work and study, is to bring together the basic knowledges permitting an easy approach to the identification of a great number of the species to be encountered. More than 400 species are illustrated with color photographs and/or drawings together with comments concerning synonyms, habit, description, ecology and distribution. Plant species are listed and colour-coded according to classification:

Cyanoprocaryota, lichenized Fungi, Anthocerophyta, Marchantiophyta and Bryophyta (red edge), Lycophyta and Monilophyta (green edge), Magnoliopsida (blue edge) and Liliopsida (yellow edge). An index allows easy location either according to genus and species. An account of the research on copper-cobalt ecosystems carried out during the last ten years in southeastern D.R. Congo is also presented. The editors have spent more than twenty years in the area concerned and have collected more than 8,500 voucher specimens, including eleven species new to science (holotypes).

## **NCN Report**

The people of the Congo have suffered from a particularly brutal colonial rule, American interference after independence, decades of robbery at the hands of the dictator Mobutu and periodic warfare which continues even now in the East of the country. But, as this insightful political history makes clear, the Congolese people have not taken these multiple oppressions lying down and have fought over many years to establish democratic institutions at home and free themselves from foreign exploitation; indeed these are two aspects of a single project. Professor Nzongola-Ntalaja is one of his country's leading intellectuals and his panoramic understanding of the personalities and events, as well as class, ethnic and other factors, make his book a lucid, radical and utterly unromanticized account of his countrymen's struggle. His people's defeat and the state's post-colonial crisis are seen as resulting from a post-independence collapse of the anti-colonial alliance between the masses and the national leadership . This book is essential reading for understanding what is happening in the Congo and the Great Lakes region under the rule of the late President Kabila, and now his son. It will also stand as a milestone in how to write the modern political history of Africa.

The Minerals Yearbook is an annual publication that reviews the mineral and material industries of the United States and foreign countries. The Yearbook contains statistical data on materials and minerals and includes information on economic and technical trends and development. The Minerals Yearbook includes chapters on approximately 90 commodities and over 175 countries. This volume of the Minerals Yearbook provides an annual review of mineral production and trade and of mineral-related government and industry developments in more than 175 foreign countries. Each report includes sections on government policies and programs, environmental issues, trade and production data, industry structure and ownership, commodity sector developments, infrastructure, and a summary outlook.

Since 2000 and the implementation of China's 'going abroad' policy, mainland Chinese state-owned and private companies have significantly increased their interests in the resources and investment opportunities of the Congo Basin, bringing new opportunities as well as potential social and environmental costs. This report is a synthesis of some main findings of preliminary scoping studies conducted by CIFOR and partners in Cameroon, Democratic Republic of Congo and Gabon. It focuses on how Chinese trade and investment in the forestry, mining and agricultural sectors might relate to effects on forests and forest-dependent communities in the region. All studies were conducted under the CIFOR project 'Chinese trade and investment in Africa: Assessing and governing trade-offs to national economies, local livelihoods and forest ecosystems', initiated in 2010. The scoping studies yielded useful results, including an increased understanding of the main trends in natural resources trade between the target countries and China, and the major land-based productive sectors targeted by Chinese investors. The studies also considered the role of national agencies tasked with promoting investment and overseeing

corporate adherence to environmental and social requirements, and provided a better understanding of the informal processes surrounding investment and acquisition of land and other resources.

## **Country Report**

The development of an effective state, a reliable infrastructure, and a dynamic private sector has long been hampered by political economy obstacles in the Democratic Republic of Congo. Resilience of an African Giant identifies these obstacles, which prevent the country from realizing its economic potential as the second-largest country in Sub-Saharan Africa, and outlines how they can be—and in some cases have been—overcome. Four instruments that have been used to boost economic development in the past and that can contribute to more development in the future are explored in the book: coordination among those who control or influence policy, application of new technologies, leveraging of external anchors, and development of social accountability networks. This book pulls together an impressive body of research on the exemplary transition of a country from a state of conflict to a post-conflict situation, and from there toward becoming a country with legitimate institutions created by free, democratic, and

transparent elections. I therefore wholeheartedly recommend it to all who are interested in development, particularly to policy makers in my country, as well as its partners.

- In 2003, four mining shares rose over four times in price, with one gaining ten times.- In just the first two months of 2004, 26 mining shares increased more than 20%, with five shares doubling.- Merrill Lynch's World Mining Trust is the UK's best performing fund over the past three years, having risen by over 200 per cent. But is the mining boom about to end? Not according to this book, by Michael Coulson, Chairman of the Association of Mining Analysts. Coulson argues that, if anything, we are still in the early stages of prolonged strength in mining stocks and despite what some commentators are saying, the boom is far from over. FROM THE BACK COVER The prospect of instant riches gives the mining sector an obvious glamour. And when the mining sector begins to run it can be an awesome sight and the excitement generated can be every bit as seductive and heady as that which enveloped markets during the internet boom. But due to the counter-cyclical nature of many mining stocks, they can also offer a valuable refuge when stock markets turn down. In this book, Michael Coulson gives a masterly overview of the sector, explains both the rewards and the pitfalls of investing in mining shares and argues convincingly that mining should once again form a core sector for all investors. The book is for anyone interested in mining, and

particularly mining as an investment. Whilst it contains material which will be useful to even experienced followers of the sector, its main target is those who are interested in mining but perhaps not particularly familiar with the sector, and would like to know more. All the subjects are covered that are fundamental to acquiring sufficient knowledge about the mining sector to invest in it with confidence. While the mining s

Mankind is using a greater variety of metals in greater quantities than ever before. As a result there is increasing global concern over the long-term availability of secure and adequate supplies of the metals needed by society. Critical metals, which are those of growing economic importance that might be susceptible to future scarcity, are a particular worry. For many of these we have little information on how they are concentrated in the Earth's crust, how to extract them from their ores, and how to use, recycle and dispose of them effectively and safely. Published with the British Geological Survey, the Critical Metals Handbook brings together a wealth of knowledge on critical metals and provides a foundation for improving the future security and sustainability of critical metal supplies. Written by international experts, it provides a unique source of authoritative information on diverse aspects of the

critical metals, including geology, deposits, processing, applications, recycling, environmental issues and markets. It is aimed at a broad non-specialist audience, including professionals and academics working in the exploration and mining sectors, in mining finance and investment, and in mineral processing and manufacturing. It will also be a valuable reference for policy makers concerned with resource management, land-use planning, eco-efficiency, recycling and related fields.

A high percentage of many raw and semi-finished materials critical to U.S. manufacturing are imported. China is the controlling producer of 11 of these materials and has instituted export restrictions that have led to two-tier pricing, creating pressure to move manufacturing to China. This report suggests the need for actions to mitigate the impact of such market distortions on the global manufacturing sector.
