It's the year 2039, and Lake Michigan is mysteriously

emptied of water. The planet's atmosphere and magnetic field are failing, and fires burn ominously throughout the empty lake bed. In this seemingly endless desert east of Chicago, three factions are locked in conflict: the original end-of-times cultist settlers who follow religious visionary Fulcrum Maneuvers and worship a giant World Worm they deem responsible for the drained lake; the megacorporation Quadrilateral, a mega-consumerist, planned-community combine of bourgeois city planners developing what is now called the Wildland-Urban Interface; and the Blackout Angels, landlocked punk pirates raised in Quadrilateral cities, who oppose everything and everyone. In Davis Schneiderman's shocking novel, *Drain*, freedom, creativity, and transgression wage war with forces of control, censorship, and conformity. The wordscapes of William S. Burroughs and Thomas Pynchon, the dystopic nightmares of Philip K. Dick, and the transgressive punch of Chuck Palahniuk and Georges Bataille together convene in this stunning and thrilling work.

Now updated to include new chapters dedicated to the Global Economic Crisis. The most exciting new text in a generation, Chad Jones's *Macroeconomics* will change the way intermediate macroeconomics courses are taught. It is the first and only undergraduate text to present the Romer model of Endogenous Technological Change, which is integral to the way economists study growth theory today.

Other texts stop at the Solow model, an approach first formulated in the 1950s. Jones presents the Romer model at an appropriate level for undergraduates. The text is written in an engaging, conversational style that makes students feel as though they are sitting in on one of Professor Jones's lectures. When introducing new material, he presents it in a careful, patient manner and follows the discussion with case studies and worked examples. Each chapter includes two complete worked examples that walk students step-by-step through the material covered in that chapter. In addition, this is the first text in the intermediate macroeconomics market to be fully integrated with an online homework management system. The easy-to-use SmartWork homework management system offers extensive answer feedback as students work through a problem. [Click here to find out more](#)

various engineering disciplines—Mechanical, Civil, Industrial Engineering, Electronics Engineer-ing and Computer Science—and for postgraduate students in Industrial Engineering and Water Resource Management, this comprehensive and well-organized book, now in its Second Edition, shows how complex economic decisions can be made from a number of given alternatives. It provides the managers not only a sound basis but also a clear-cut approach to making decisions. These decisions will ultimately result in minimizing costs and/or maximizing benefits. What is more, the book adequately illustrates the concepts with numerical problems and Indian cases. While retaining all the chapters of the previous edition, the book adds a number of topics to make it more comprehensive and more student friendly. What's New to This Edition

- Discusses different types of costs such as average cost, recurring cost, and life cycle cost.
- Deals with different types of cost estimating models, index numbers and capital allowance.
- Covers the basics of nondeterministic decision making.
- Describes the meaning of cash flows with probability distributions and decision making, and selection of alternatives using simulation.
- Discusses the basic concepts of Accounting.

This book, which is profusely illustrated with worked-out examples and a number of diagrams and tables, should prove extremely useful not only as a text but also as a reference for those offering courses in such areas as Project Management, Production Management, and Financial Management.
