In this remarkable new photographic history, local historian and photographer Dennis LeBeau presents a heartwarming tale of life in the Brookfields at the turn of the century. The photographs in this collection are those of William Bullard, an itinerant photographer in the 1890s and early 1900s from North Brookfield, whose work has never before been published in book form. The story of Bill Bullard's life and photographic legacy are dramatically revealed in this fascinating glimpse into the past. After the photographer's untimely and tragic demise, the rich photographic archives of Bill Bullard were carefully preserved by his brother, Charlie Bullard, and three generations of the neighboring Gaudette family. Dennis LeBeau has individually reprinted each image in this collection from its original glass plate negative. Mr. LeBeau's researched and well-informed captions accompany the photographs in Bullard's collection, creating a comprehensive historic portrait of both the Brookfields and the Bullard family.

What does it mean to be an ethical professional? A professional career can be so demanding that it permeates every aspect of a person's life and personality. In light of this fact, it is especially important for students who are planning to enter a chosen profession to understand its moral status, moral virtues, and possible moral pitfalls, so that they will be equipped to deal with the inevitable moral quandaries that they will encounter as professionals. The most up-to-date professional ethics reader available, *Ethics Across the Professions* analyzes the complex ethical issues that arise in such fields as engineering, finance, healthcare, journalism, and law. Featuring a wide array of both classic and contemporary sources, it ranges from works by Aristotle and Kant to selections by Michael Bayles, Sissela Bok, Paul Ekman, and Thomas Nagel. Organized topically, the anthology covers what it means to be a professional, outlines several ethical models, and addresses key issues including deception in professional life, privacy, loyalty, social welfare, conflicts of interest, and self-regulation. The book includes detailed chapter introductions, several practical case studies at the end of each chapter, and provocative discussion questions on issues like "whistle-blowing," educating illegal immigrant children, sports, and advertisements for pharmaceutical companies. Edited by three renowned ethicists, *Ethics Across the Professions* is especially suited for introductory professional ethics courses taught in philosophy departments as well as in business schools, nursing schools, and other professional programs.

The Ultimate Guide to Science Fiction

Sometimes you do everything right, but it just isn't your day. A part fails and your helicopter comes apart in flight, or, another aircraft runs into you and the pieces of both fall to the ground below, or the enemy gunner pulls the trigger at just the right moment and his rounds find your aircraft in exactly the right spot to take it out of the sky. Whichever way it happens, it wasn't your day. Which is why, after 24 years and over 5,000 flight hours with four armed services, Major Robert Curtis was so surprised at being alive when he passed his retirement physical. Starting with enlisting in the Army to fly helicopters during Vietnam, and continuing on through service with the National Guard, Marine Corps and Royal Navy, he flew eight different helicopters—from the wooden-bladed OH-13E, through the Chinook, SeaKnight and SeaKing, in war and peace around the world. During that time over 50 of his friends died in crashes, both in combat and in accidents, but somehow his skill, and not an inconsiderable amount of luck and superstition, saw him through. His flying career began with a misbegotten strategy for beating the draft by enlisting. With the Vietnam War raging full blast in 1968 the draft was inevitable, so he wanted to at least get some small measure of control of his future. Although he had no thought of flying when he walked into the recruiting office, he walked out signed up to be a helicopter pilot. What he did not know was that 43% of all the aircraft sent to Vietnam were destroyed in combat or accidents. Soon he was in the thick of the war, flying Chinooks with the 101st Airborne. After Vietnam he left the Army, but kept flying in the National Guard while going to college. He was accepted at two law schools, but flying is addictive, so he instead enlisted in the USMC to fly some more. Over the next 17 years he would fly around the world off US and British ships from Egypt to Norway and all points in between. His engaging story will be a delight to all aviation enthusiasts.

The Chinese are inordinately proud of having invented, among a whole host of other things, the compass (without which the world would have got lost), paper (without which books would not exist), the printing press (ditto), porcelain (no pretty matching chinaware), silk (no decadence), pasta (what would the Italians eat?), the wheelbarrow (how would civilisation have fared without it?) and the bristle toothbrush. A guide to understanding the Chinese which dispels or confirms preconceived prejudices with humor and insight.
