College Blue Book 33 V4 Occupational Education

Heirs of General Practice is a frieze of glimpses of young doctors with patients of every age—about a dozen physicians in all, who belong to the new medical specialty called family practice. They are people who have addressed themselves to a need for a unifying generalism in a world that has become greatly subdivided by specialization, physicians who work with the "unquantifiable idea that a doctor who treats your grandmother, your father, your niece, and your daughter will be more adroit in treating you." These young men and women are seen in their examining rooms in various rural communities in Maine, but Maine is only the example. Their medical objectives, their successes, the professional obstacles they do and do not overcome are representative of any place family practitioners are working. While essential medical background is provided, McPhee's masterful approach to a trend significant to all of us is replete with affecting, and often amusing, stories about both doctors and their charges.

Handbook of Life Course Health Development

This book is open access under a CC BY 4.0 license. This handbook synthesizes and analyzes the growing knowledge base on life course health development (LCHD) from the prenatal period through emerging adulthood, with implications for clinical practice and public health. It presents LCHD as an innovative field with a sound theoretical framework for understanding wellness and disease from a lifespan perspective, replacing previous medical, biopsychosocial, and early genomic models of health. Interdisciplinary chapters discuss major health concerns (diabetes, obesity), important less-studied conditions (hearing, kidney health), and large-scale issues (nutrition, adversity) from a lifespan viewpoint. In addition, chapters address methodological approaches and challenges by analyzing existing measures, studies, and surveys. The book concludes with the editors' research agenda that proposes priorities for future LCHD research and its application to health care practice and health policy. Topics featured in the Handbook include:

- The prenatal period and its effect on child obesity and metabolic outcomes.
- Pregnancy complications and their effect on women's cardiovascular health.
- A multi-level approach for obesity prevention in children.
- Application of the LCHD framework to autism spectrum disorder.
- Socioeconomic disadvantage and its influence on health development across the lifespan.
- The importance of nutrition to
