## **Control Systems Engineering**

The operational amplifier ("op amp") is the most versatile and widely used type of analog IC, used in audio and voltage amplifiers, signal conditioners, signal converters, oscillators, and analog computing systems. Almost every electronic device uses at least one op amp. This book is Texas Instruments' complete professional-level tutorial and reference to operational amplifier theory and applications. Among the topics covered are basic op amp physics (including reviews of current and voltage division, Thevenin's theorem, and transistor models), idealized op amp operation and configuration, feedback theory and methods, single and dual supply operation, understanding op amp parameters, minimizing noise in op amp circuits, and practical applications such as instrumentation amplifiers, signal conditioning, oscillators, active filters, load and level conversions, and analog computing. There is also extensive coverage of circuit construction techniques, including

circuit board design, grounding, input and output isolation, using decoupling capacitors, and frequency characteristics of passive components. The material in this book is applicable to all op amp ICs from all manufacturers, not just TI. Unlike textbook treatments of op amp theory that tend to focus on idealized op amp models and configuration, this title uses idealized models only when necessary to explain op amp theory. The bulk of this book is on real-world op amps and their applications; considerations such as thermal effects, circuit noise, circuit buffering, selection of appropriate op amps for a given application, and unexpected effects in passive components are all discussed in detail. \*Published in conjunction with Texas Instruments \*A single volume, professional-level guide to op amp theory and applications \*Covers circuit board layout techniques for manufacturing op amp circuits.

## Speaking With A Purpose

WINNER OF THE 2017 PULITZER PRIZE GENERAL NON-FICTION From Harvard sociologist and MacArthur "Genius" Matthew Desmond, a landmark work of scholarship and reportage that will forever change the way we look at poverty in America In this brilliant, heartbreaking book, Matthew Desmond takes us into the poorest neighborhoods of Milwaukee to tell the story of eight families on the edge. Arleen is a single mother trying to raise her two sons on the \$20 a month she has left after paying for their rundown apartment. Scott is a gentle nurse consumed by a heroin addiction. Lamar, a man with no legs and a neighborhood full of boys to look after, tries to work his way out of debt. Vanetta participates in a botched stickup after her hours are cut. All are spending almost everything they have on rent, and all have fallen behind. The fates of these families are in the hands of two landlords: Sherrena Tarver, a former schoolteacher turned inner-city entrepreneur, and Tobin Charney, who runs one of the worst trailer parks in Milwaukee. They loathe some of their tenants and are fond of others, but as Sherrena puts it, "Love don't pay the bills." She moves to evict Arleen and her boys a few days before Christmas. Even in the most desolate areas of American cities, evictions used to be rare. But today, most poor renting families are spending more than half of their income on housing, and eviction has become ordinary, especially for single mothers. In vivid, intimate prose, Desmond provides a ground-level view of one of the most urgent issues facing America today. As we see families forced into shelters, squalid apartments, or more dangerous neighborhoods, we bear witness to the human cost of America's vast inequality—and to people's determination and intelligence in the face of hardship. Based on years of embedded fieldwork and painstakingly gathered data, this masterful book transforms our understanding of extreme poverty and economic exploitation while providing fresh ideas for solving a devastating, uniquely American problem. Its unforgettable scenes of hope and loss remind us of the centrality of home, without which nothing else is possible. This book reviews the progress made in salivary diagnostics during the past two decades and identifies the likely direction of future endeavors. After an introductory section describing the histological and anatomical features of the salivary glands and salivary function, salivary collection devices and diagnostic platforms are reviewed. The field of "salivaomics" is then considered in detail, covering, for example, proteomics, the peptidome, DNA and RNA analysis, biomarkers, and methods for biomarker discovery. Salivary diagnostics for oral and systemic diseases are thoroughly discussed, and the role of salivary gland tissue engineering for future diagnostics is explored. The book closes by considering legal issues and barriers to salivary diagnostic development. *Advances in Salivary Diagnostics* will be an informative and stimulating reference for both practitioners and students.

Then follow examples of short fiction arranged in alphabetical order by authors that include Welty, William Carlos Williams, Melville, de Maupassant, David Leavitt, Louise Erdrich, and Thom Jones. The last section, "Writers on Writing," features 15 valuable commentaries on the way writers read particular works of fiction: Andrea Barrett reads Willa Cather's "Paul's Case"; Gina Berriault, Ivan Bunin's "The Gentleman from San Francisco"; and Richard Ford, Bharati Mukherjee's "The Management of Grief," to name just three. In all, there are 44 stories written after 1980, 26 new to the 6th edition. A glossary is included and an instructor's handbook is available. Annotation copyrighted by Book News Inc., Portland, OR

## **Psychology: Modules for Active Learning**

Using psychodynamic theory and riveting case material, this book dissects the figure of the malignant narcissist leader (MNL). Across the world today, individuals and societies are impacted by unprecedented disruptive influences, from globalization and climate change to economic uncertainty and mass migration. The rise of populists and would-be saviors has promised certainty for anxious populations, but how far are such leaders suffering from the MNL pathology? Through the psychoanalytic lens of Otto Kernberg, the authors explain the etiology of the charismatic MNL's clinical features: charisma, grandiosity, criminality, sadism, and paranoia. The book outlines the limitations and complexity of diagnosis, contextualizing the MNL within the transcendental and millenarian movements, and discusses the patho-dynamics of high-pressure groups and totalitarian regimes, including types of groups, methods of mind control, categories of constituents, the corporate totalitarian state, and the authoritarian demagogue. The book looks at a wide range of leaders including Donald Trump, Bhagwan Shree Rajneesh, Roger Ailes, Keith Raniere, Jan of Leiden, and Credonia Mwerinde. Distinguishing the disordered personality of the MNL from other personality disorders, and presenting a new model of overlapping descriptors to categorize high-pressure group types and identifying types of followers as well, this book represents essential reading for psychodynamically minded psychologists, psychiatrists, social workers, sociologists, political scientists, and those working in organizational development.
