Among the Jewish writers who emigrated from Eastern Europe to France in the 1910s and 1920s, a number chose to switch from writing in their languages of origin to writing primarily in French, a language that represented both a literary center and the promises of French universalism. But under the Nazi occupation of France from 1940 to 1944, these Jewish émigré writers—among them Irène Némirovsky, Benjamin Fondane, Romain Gary, Jean Malaquais, and Elsa Triolet—continued to write in their adopted language, even as the Vichy regime and Nazi occupiers denied their French identity through

xenophobic and antisemitic laws. In this book, Julia Elsky argues that these writers reexamined both their Jewishness and their place as authors in France through the language in which they wrote. The group of authors Elsky considers depicted key moments in the war from their perspective as Jewish émigrés, including the June 1940 civilian flight from Paris, life in the occupied and southern zones, the roundups and internment camps, and the Resistance in France and in London. Writing in French, they expressed multiple cultural, religious, and linguistic identities, challenging the boundaries between center and periphery, between French and foreign, even when their sense of belonging was being violently denied.

Automation

This is the first comprehensive introduction to the concepts, theories, and applications of pricing and revenue optimization. From the initial success of "yield management" in the commercial airline industry down to more recent successes of markdown management and dynamic pricing, the application of mathematical analysis to optimize pricing has become increasingly important across many different industries. But, since pricing and revenue optimization has involved the use of sophisticated mathematical techniques, the topic has remained largely inaccessible to students and the typical manager. With methods proven in the MBA courses taught by the author at Columbia and Stanford Business Schools, this book presents the basic concepts of pricing and revenue optimization in a form accessible to MBA students, MS students, and advanced undergraduates. In addition, managers will find the practical approach to the issue of pricing and revenue optimization invaluable. Solutions to the end-of-chapter exercises are available to instructors who are using this book in their courses. For access to the solutions manual, please contact marketing@www.sup.org.

A technical engineering manual presenting a hands-on approach for solving problems related to the design and analysis of both high temperature hot water and steam energy systems. This convenient single-volume source demonstrates practical, time-saving calculations for sizing and selecting energy system requirements, including types of fuel, storage, handling facilities, waste disposal needs, HVAC needs, and back-up systems. Also discusses calculations for sizing compressors, air pollution equipment, fans, filters and related components. Takes into account considerations for fuel corrosion, and chemical variation in the water and air.
