Why Place Matters

This report provides an overview of the relationship between executive and legislative authority over national security information. It summarizes the current laws that form the legal framework protecting classified information, including current executive orders and some agency regulations pertaining to the handling of unauthorized disclosures of classified information by government officers and employees. The report also summarizes criminal laws that pertain specifically to the unauthorized disclosure of classified information, as well as civil and administrative penalties. Finally, the report describes some recent developments in executive branch security policies and relevant legislative activity.

Steve Jobs

NULL

Bullying Among Older Adults

The trilogy 'Horticulture: Plants for People and Places' encapsulates and explains the fundamentals of what the disciplines of 'horticulture' and 'horticultural science' embrace and encompass currently. Those outside these disciplines, and not infrequently some inside them, find difficulty in understanding and explaining the broad-church which is horticulture and horticultural science.

New Technologies for Human Rights Law

and Practice

Monitoring and enforcement issues must be analysed when determining the effectiveness of pollution control regulation, and clearly influence choices about how to regulate. This book demonstrates how an economic analysis of law enforcement can generate important insights into how best to enforce pollution control regulation. It seeks to provide a clear and accessible way into the law and economics literature on enforcement. More specifically, it uses Gary Becker's deterrence model which, by differentiating between two enforcement variables (namely the probability of apprehension and conviction and the severity of sanction), facilitates a comparison of the effectiveness of different enforcement tools in inducing desirable behaviour. As such, it provides a valuable analytical tool in considering how best to pursue cost-effective enforcement. Major themes to be addressed include Becker's deterrence model and expansions thereof, reasons for compliance, environmental enforcement strategies and the importance of a deterrence threat and formal pollution control law enforcement mechanisms such as prosecution and criminal sanctions, administrative mechanisms and civil liability. The book argues that in pursuing cost-effective enforcement much can be learned from examining enforcement practices in different jurisdictions, and to this end the author examines pollution control laws, enforcement strategies and sanctions in Australia, Canada and England and Wales. The book makes an important contribution to existing literature on environmental

law enforcement, but its value extends beyond this. The theoretical framework adopted and the range of issues discussed make it of interest to regulatory and public law scholars more generally.

Design With Nature

When World War II engulfed the nation, the men and women of Akron dutifully played their part in the epic struggle. Keyes Beech ducked grenades as marines raised the American flag at on Iwo Jima. Newspaper magnate John S. Knight watched the Japanese surrender on the USS Missouri just five months after his son was killed in Germany. On the homefront, Goodyear manufactured blimps used to hunt down Nazi submarines, and noted Beacon Journal cartoonist Web Brown pledged his talent and his pen to boosting morale at home and abroad. Replete with more than one hundred images, including many of Brown's wartime drawings, this thrilling account by local author Tim Carroll recalls all that Akron gave for freedom.

Acutely ill infant

Fertilizer Abstracts

Horticulture: Plants for People and Places

With over half the world's population now deemed to

be urbanised, cities are assuming a larger role in political debates about the security and sustainability of the global food system. Hence, planning for sustainable food production and consumption is becoming an increasingly important issue for planners, policymakers, designers, farmers, suppliers, activists, business and scientists alike. The rapid growth of the food planning movement owes much to the fact that food, because of its unique, multi-functional character, helps to bring people together from all walks of life. In the wider contexts of global climate change, resource depletion, a burgeoning world population, competing food production systems and diet-related public health concerns, new paradigms for urban and regional planning capable of supporting sustainable and equitable food systems are urgently needed. This book addresses this urgent need. By working at a range of scales and with a variety of practical and theoretical models, this book reviews and elaborates definitions of sustainable food systems, and begins to define ways of achieving them. To this end 4 different themes have been defined as entry-points into the discussion of 'sustainable food planning'. These are (1) urban agriculture, (2) integrating health, environment and society, (3) food in urban design and planning and (4) urban food governance.

Coregonid Fishes of the Great Lakes

World War II Akron

Draws on more than forty interviews with Steve Jobs, as well as interviews with family members, friends, competitors, and colleagues to offer a look at the co-founder and leading creative force behind the Apple computer company.

Marijuana Debunked

Across the country, our children are beginning life from very different starting points. Some have aspirations and believe they can be achieved. For too many others, aspirations are tempered, if not dashed, by the sobering realities of everyday life. These different starting points place children on distinctly different trajectories of growth and development, ultimately leading to vastly different adult outcomes. How did we get to a place where circumstances of birth have become so determinative? And what must we do, within communities and across our country, to better equalize opportunity for more Americans – both young and old? The editors of this volume contend that if, as a nation, we do nothing, then we will continue to drift apart, placing an unsustainable strain on the nation's social fabric and the character of its democracy. Consequently, understanding the dynamics governing the distribution and transmission of opportunity – and transforming this understanding into policies and programs – is critical for not only the life outcomes of individual Americans and their children, but also the country as a whole. The goal of Educational Testing Service's Opportunity in America initiative is to explore these powerful dynamics and to describe and convey them in a way that advances the

national conversation about why we must take action – and how best to do so. This volume contains 14 chapters, including an epilogue, written by leaders from a range of fields including education, economics, demography, and political science. Collectively, they not only illuminate key aspects of the problem but also offer suggestions of what policies, programs, and changes in practices could begin to reverse the trends we are seeing. Written in an engaging style, this volume constitutes an essential foundation for informed discussion and strategic analysis.

Sustainable food planning: evolving theory and practice

Featuring brand new short stories from Kevin Barry, Eimear McBride, Belinda McKeon, Lisa McLnerney, Danielle McLaughlin, Stuart Neville, Sally Rooney, Kit de Waal and many more. Ireland is going through a golden age of writing: that has never been more apparent. I wanted to capture something of the energy of this explosion, in all its variousness. Following her own acclaimed short-story collection, *Multitudes*, Lucy Caldwell guest-edits the sixth volume of Faber's long-running series of all new Irish short stories, continuing the work of the late David Marcus and subsequent guest editors, Joseph O'Connor, Kevin Barry and Deirdre Madden.

A Statistical Compendium, 1843 to 2013

Bradstreet's

Marijuana subtly damages the teenage brain, causing lifelong problems. Yet four million teens in Canada and the United States use the drug, a half million of them daily. For those who have heard only the pro-legalization side, this book presents the case against marijuana on an equal footing. In it, you will learn: - The scientific research refuting all the pro-marijuana talking points - Why marijuana is not safe for adolescents, especially those behind the wheel - How the news media helped to create an epidemic of teenage use - Why the promise of tax revenue is a mirage - Why legalization would be an economic burden on society - The misleading language used by pro-legalization partisans - Why marijuana laws that prohibit use are good for the public health

Ed Gogek, MD, an addiction psychiatrist for 30 years, has treated more than 10,000 addicts and alcoholics in jails, prisons, homeless clinics, mental health centers and substance abuse treatment programs. His opinion pieces on addiction and mental health have appeared in the New York Times and over a dozen major U.S. newspapers. He received his medical training in Canada and the United States. "Dr. Gogek has a unique ability to master the complex and hotly contested material to make it understandable. His book has a strong message that our nation, including both Left and Right, needs today when most discussions of drug policy are filled with dangerous misinformation." Robert L. DuPont, MD First Director of National Institute of Drug Abuse Second White House Drug Chief "This book is a must-read for anyone who cares about accuracy and fairness in news coverage." Christine Tatum, Former National President, Society of Professional Journalists "Gogek

lists all the pro-legalization arguments in detail, and refutes them exceptionally well." Library Journal

Handbook of Research on Climate Change Impact on Health and Environmental Sustainability

Training Circular (TC) 3-09.81, "Field Artillery Manual Cannon Gunnery," sets forth the doctrine pertaining to the employment of artillery fires. It explains all aspects of the manual cannon gunnery problem and presents a practical application of the science of ballistics. It includes step-by-step instructions for manually solving the gunnery problem which can be applied within the framework of decisive action or unified land operations. It is applicable to any Army personnel at the battalion or battery responsible to delivered field artillery fires. The principal audience for ATP 3-09.42 is all members of the Profession of Arms. This includes field artillery Soldiers and combined arms chain of command field and company grade officers, middle-grade and senior noncommissioned officers (NCO), and battalion and squadron command groups and staffs. This manual also provides guidance for division and corps leaders and staffs in training for and employment of the BCT in decisive action. This publication may also be used by other Army organizations to assist in their planning for support of battalions. This manual builds on the collective knowledge and experience gained through recent operations, numerous exercises, and the deliberate process of informed reasoning. It is rooted in time-tested principles and fundamentals, while

accommodating new technologies and diverse threats to national security.

Seismic Inverse Q Filtering

Contemporary American society, with its emphasis on mobility and economic progress, all too often loses sight of the importance of a sense of “place” and community. Appreciating place is essential for building the strong local communities that cultivate civic engagement, public leadership, and many of the other goods that contribute to a flourishing human life. Do we, in losing our places, lose the crucial basis for healthy and resilient individual identity, and for the cultivation of public virtues? For one can't be a citizen without being a citizen of some place in particular; one isn't a citizen of a motel. And if these dangers are real and present ones, are there ways that intelligent public policy can begin to address them constructively, by means of reasonable and democratic innovations that are likely to attract wide public support? *Why Place Matters* takes these concerns seriously, and its contributors seek to discover how, given the American people as they are, and American economic and social life as it now exists—and not as those things can be imagined to be in some utopian scheme—we can find means of fostering a richer and more sustaining way of life. The book is an anthology of essays exploring the contemporary problems of place and placelessness in American society. The book includes contributions from distinguished scholars and writers such as poet Dana Gioia (former chairman of the National

Endowment for the Arts), geographer Yi-Fu Tuan, urbanist Witold Rybczynski, architect Philip Bess, essayists Christine Rosen and Ari Schulman, philosopher Roger Scruton, transportation planner Gary Toth, and historians Russell Jacoby and Joseph Amato.

The Commercial & Financial Chronicle and Hunt's Merchants' Magazine

Seismic inverse Q filtering is a data processing technology for enhancing the resolution of seismic images. It employs a wave propagation reversal procedure that compensates for energy absorption and corrects wavelet distortion due to velocity dispersion. By compensating for amplitude attenuation, seismic data can provide true relative-amplitude information for amplitude inversion and subsequent reservoir characterization. By correcting the phase distortion, seismic data with enhanced vertical resolution can yield correct timings for lithological identification. This monograph presents the theory of inverse Q filtering and a series of algorithms, collected with the following selection criteria in mind: robustness, effectiveness and practicality. The book is written for processing geophysicists who are attempting to improve the quality of seismic data in terms of resolution and signal-to-noise ratio, as well as for reservoir geophysicists who are concerned about seismic fidelity in terms of true amplitudes, true timings and true frequencies. It will also be particularly valuable as a guide for seasoned geophysicists who are

attempting to develop seismic software for various research settings. Finally, it can be used as a reference work or textbook for postgraduate students in seismic and reservoir geophysics.

Aligning Policies for a Low-carbon Economy

In this seasonal treasure, Newbery Medalist Susan Cooper's beloved poem heralds the winter solstice, illuminated by Caldecott Honoree Carson Ellis's strikingly resonant illustrations. So the shortest day came, and the year died . . . As the sun set on the shortest day of the year, early people would gather to prepare for the long night ahead. They built fires and lit candles. They played music, bringing their own light to the darkness, while wondering if the sun would ever rise again. Written for a theatrical production that has become a ritual in itself, Susan Cooper's poem "The Shortest Day" captures the magic behind the returning of the light, the yearning for traditions that connect us with generations that have gone before -- and the hope for peace that we carry into the future. Richly illustrated by Carson Ellis with a universality that spans the centuries, this beautiful book evokes the joy and community found in the ongoing mystery of life when we celebrate light, thankfulness, and festivity at a time of rebirth. Welcome Yule!

Enforcing Pollution Control Regulation

This book presents an analysis of why some large

infrastructure projects are delayed or compromised and offers important insights into the better delivery of future projects. It provides an important reaction to the ambitious €315 billion investment plan devised by the European Commission, wherein Europe's infrastructure is a key investment target. Germany is adopted as a focus, as Europe's largest economy, and a nation that has seen significant delays and tensions in the delivery of key infrastructure projects. The contributions to this volume demonstrate various patterns for infrastructure assets and illustrate how factors such as poor project governance, early planning mistakes, inappropriate risk management and unforeseen technological challenges influence delivery. The in-depth case studies on the Berlin Brandenburg Airport, the Hamburg Elbphilharmonie, and offshore wind parks show how project delivery can face massive problems, and illuminating solutions are offered to these problems. Overall, the case of Germany also offers the opportunity to assess various new forms of project delivery, such as public-private partnerships (PPP), and the risks and opportunities of ambitious first-mover 'pioneer' projects. The book will be of great interest for scholars and upper-level students of human geography, business and management, as well as policy makers.

Climate Change and Natural Disasters

Unbeknownst to many, bullying is not an experience limited to childhood, but is an epidemic occurring far too often among older adults as well. Studies have revealed the alarmingly high rate at which older

adults in senior programs and care settings are bullied by their peers, resulting in profoundly negative effects on the elders, the staff, and the community in which it is occurring. *Bullying Among Older Adults* is the first resource to address this critical issue, providing the knowledge and tools to recognize bullying and develop constructive ways to intervene and prevent it. As an expert on peer bullying among older adults, author Robin Bonifas draws upon a growing body of research as well as the voices and actual experiences of the targets and perpetrators of bullying. She exposes the nature of this phenomenon and then presents positive, proactive ways for community-based or long-term care staff to minimize and prevent it from happening. Filled with practical resources and examples, this guide offers effective intervention strategies including empathy and civility training, empowerment strategies, bystander intervention, and more. Special features: -detailed, step-by-step assessment strategies and anti-bullying interventions -effective coping strategies to minimize negative consequences for those bullied -pro-social activities to promote empathy and civility -specialized approaches for residents with dementia or mental illness learning activities, case studies, sample forms, and policy guidelines (also available as downloadable PDF files) *Bullying Among Older Adults* will be an invaluable resource in creating an atmosphere of caring and respect among both residents and staff. "This much needed resource is well researched and full of practical tools that can be used by a wide range of practitioners. Anyone who works with older adults should keep this handy as a practical reference in their day to day work." --Judah L. Ronch, Ph.D., Dean

and Professor, Erikson School, University of Maryland
Baltimore County

Large Infrastructure Projects in Germany

This Trilogy explains “What is Horticulture?”. Volume three of Horticulture: Plants for People and Places presents readers with detailed accounts of the scientific and scholastic concepts which interact with the arts and humanities and which now underpins the rapidly evolving subject of Social Horticulture. This discipline transcends the barriers between science, medicine and the arts. This volume covers:- Horticulture and Society, Diet and Health, Psychological Health, Wildlife, Horticulture and Public Welfare, Education, Extension, Economics, Exports and Biosecurity, Scholarship and Art, Scholarship and Literature, Scholarship and History and the relationship between Horticulture and Gardening. This volume brings the evolution of the Discipline and Vocation of Horticulture firmly into the 21st Century. It covers new ground by providing a detailed analysis of the value of Horticulture as a force for enhancing society in the forms of social welfare, health and well-being, how knowledge is transferred within and between generations, and the place of Horticulture in the Arts and Humanities. Substantial emphasis is given to the relationships between health, well-being and plants by the internationally acclaimed authors who have contributed accounts of their work in this book.

Women in the Labor Force

Climate change is not only one of the greatest threats to modern civilization; it is also a great challenge to economic development in the 21st century. Global warming can lead to periods of both drought and intense rain, causing crops to fail and ruining the livelihoods of many in underdeveloped countries. The Handbook of Research on Climate Change Impact on Health and Environmental Sustainability is an authoritative reference source that offers a comprehensive and timely analysis of various aspects of global warming and its consequences. Featuring such topics as assessment of and adaptation to climate change, water and its socio-economic impact, the environmental effects of climate change on human health, and the mitigation of climate change on both a local and global level, this expansive handbook is an essential reference source for students, researchers, academicians, engineers, government executives, and other practitioners looking to make a difference in the treatment of our environment. This publication features timely research on subjects including, but not limited to, climate change and its effect on both urbanization and the trade competitiveness of different regions, water-related diseases flourishing due to climate change, health risks and rethinking health service provision, losses from natural disasters, farmers' views on the environment, drought management policies, groundwater resource management, trends in long-term rainfall, fishery management and productivity, preserving biodiversity, and sustainable forest use.

Survey of Current Business

Car Operating Costs

Provides a roadmap for understanding the relationship between technology and human rights law and practice. This title is also available as Open Access.

Distinction Through Discovery

This report produced in co-operation with the International Energy Agency (IEA), the International Transport Forum (ITF) and the Nuclear Energy Agency (NEA) identifies the misalignments between climate change objectives and policy and regulatory frameworks across a range of policy domains.

Protection of Classified Information

The Dynamics of Opportunity in America

Freefall: America, Free Markets, and the Sinking of the World Economy

Being Various

Signs and symptoms are often difficult to interpret in infants, so a complete examination must always be conducted. An infant may present with only a few

signs even when seriously ill. The younger the infant, the more likely it is that the illness is serious and will require hospitalization. In practice, 3 months may be considered as the cut off point; particular vigilance should be exercised if the infant is less than 1 month old. Listen to the parents. A detailed history will guide the doctor more quickly towards the right diagnosis, and unnecessary investigations need not be carried out. An afebrile infant with good muscle tone, who feeds well and shows satisfactory growth is rarely seriously ill. If the general condition of the infant is reduced, make an emergency referral for further care in a hospital.

Horticulture: Plants for People and Places, Volume 3

An incisive look at the global economic crisis, our flawed response, and the implications for the world's future prosperity. The Great Recession, as it has come to be called, has impacted more people worldwide than any crisis since the Great Depression. Flawed government policy and unscrupulous personal and corporate behavior in the United States created the current financial meltdown, which was exported across the globe with devastating consequences. The crisis has sparked an essential debate about America's economic missteps, the soundness of this country's economy, and even the appropriate shape of a capitalist system. Few are more qualified to comment during this turbulent time than Joseph E. Stiglitz. Winner of the 2001 Nobel Prize in Economics, Stiglitz is "an insanely great economist, in ways you

can't really appreciate unless you're deep into the field" (Paul Krugman, New York Times). In *Freefall*, Stiglitz traces the origins of the Great Recession, eschewing easy answers and demolishing the contention that America needs more billion-dollar bailouts and free passes to those "too big to fail," while also outlining the alternatives and revealing that even now there are choices ahead that can make a difference. The system is broken, and we can only fix it by examining the underlying theories that have led us into this new "bubble capitalism." Ranging across a host of topics that bear on the crisis, Stiglitz argues convincingly for a restoration of the balance between government and markets. America as a nation faces huge challenges—in health care, energy, the environment, education, and manufacturing—and Stiglitz penetratingly addresses each in light of the newly emerging global economic order. An ongoing war of ideas over the most effective type of capitalist system, as well as a rebalancing of global economic power, is shaping that order. The battle may finally give the lie to theories of a "rational" market or to the view that America's global economic dominance is inevitable and unassailable. For anyone watching with indignation while a reckless Wall Street destroyed homes, educations, and jobs; while the government took half-steps hoping for a "just-enough" recovery; and while bankers fell all over themselves claiming not to have seen what was coming, then sought government bailouts while resisting regulation that would make future crises less likely, *Freefall* offers a clear accounting of why so many Americans feel disillusioned today and how we can realize a prosperous economy and a moral society for the

future.

Growth and Cycles in Australia's Wine Industry

Business Statistics; Biennial Supplement to the Survey of Current Business

Basis of Assets

Minnesota Rules of Court

The start of the new millennium will be remembered for deadly climate-related disasters—the great floods in Thailand in 2011, Super Storm Sandy in the United States in 2012, and Typhoon Haiyan in the Philippines in 2013, to name a few. In 2014, 17.5 million people were displaced by climate-related disasters, ten times more than the 1.7 million displaced by geophysical hazards. What is causing the increase in natural disasters and what effect does it have on the economy? Climate Change and Natural Disasters sends three messages: human-made factors exert a growing influence on climate-related disasters; because of the link to anthropogenic factors, there is a pressing need for climate mitigation; and prevention, including climate adaptation, ought not to be viewed as a cost to economic growth but as an investment. Ultimately, attention to climate-related disasters, arguably the most tangible manifestation of

global warming, may help mobilize broader climate action. It can also be instrumental in transitioning to a path of low-carbon, green growth, improving disaster resilience, improving natural resource use, and caring for the urban environment. Vinod Thomas proposes that economic growth will become sustainable only if governments, political actors, and local communities combine natural disaster prevention and controlling climate change into national growth strategies. When considering all types of capital, particularly human capital, climate action can drive economic growth, rather than hinder it.
