Performing Consumers is an exploration of the way in which brands insinuate themselves into the lives of ordinary people who encounter them at branded superstores. Looking at our performative desire to 'try on' otherness, Maurya Wickstrom employs five American brandscapes to serve as case studies: Ralph Lauren; Niketown; American Girl Place; Disney store and The Lion King; and The Forum Shops at Caesar's Palace in Las Vegas. In this post-product era, each builds for the performer/consumer an intensely pleasurable, somatic experience of merging into the brand and reappearing as the brand, or the brand's fictional meanings. To understand this embodiment as the way that capital is producing subjectivity as an aspect of itself, Wickstrom casts a wide net, drawing on: the history of capital's relationship with theatre political developments in the United States recent work in political science, philosophy, and performance studies. An adventurous study of theatrical indeterminacy and material culture, Performing Consumers brilliantly takes corporate culture to task.

Recent advances in gastroenterology and hepatology as well as new findings in biliary and pancreatic diseases are presented in the proceedings of the 86th annual congress of the Japanese Society of Gastroenterology. From the hundreds of papers delivered at the congress, 70 were selected for inclusion here. Opening with special lectures on gastroenterology in the new millennium, ulcerative colitis-pathophysiology and therapy, and life style-related diseases and gastroenterology, the volume is divided into sections reflecting the major concerns of researchers in the science of digestive diseases in Japan today: apoptosis in digestive organs, nitric oxide, transcription factors in digestive organs, antigen-presenting cells, pathology of inflammatory bowel disease, NSAID-induced gastric lesions, microcirculation in digestive diseases, hepatic regeneration, and hepatic fibrosis.

Brézé defied his own dark heritage as a near-purebred Shadowspawn for years, until his power-hungry sister Adrienne kidnapped his human lover Ellen. Now, Adrienne is dead, and the Council of Shadows is gathering its strength. To stop the Council from launching an apocalypse, Adrian and Ellen must ally with the Brotherhood, a resistance group dedicated to breaking the Council's hold on humankind by any means necessary. In the coming confrontation, Adrian must fight not only the members of the Council but also his own nature--and, as he will come to suspect, traitors within the Brotherhood itself

This is the second book of a series treating the hypotrichs, a major part of the spirotrichous ciliates. It summarises 230 years of morphological, morphogenetic, faunistic, and ecological data, heretofore scattered in some 1,300 references around the world. The book provides taxonomists, cell biologists, and ecologists with a thorough survey supplying synonyms, nomenclature and systematics, and an extensive description of morphology and ecology, including almost all published records, for each species.

### **36 Arguments for the Existence of God**

Did family honor really dictate that he marry the first eligible girl who could make intelligent conversation? The Earl of Darleston certainly hoped not, but there was no denying that he needed a bride. And Miss Phoebe Follit seemed the ideal candidate for a marriage in name only. Or so he thought. Until his bride brought a wolfhound to their wedding and he learned that he hadn't married Phoebe--but her twin, Penelope. But when Penelope revealed the reason behind the charade, Darleston knew his "unexpected bride" deserved nothing less than his whole heart. Could he now turn a paper marriage into wedding bliss?

## **Dynamics and Robust Control of Robot-Environment Interaction**

This book covers the most attractive problem in robot control, dealing with the direct interaction between a robot and a dynamic environment, including the human-robot physical interaction. It provides comprehensive theoretical and experimental coverage of interaction control problems, starting from the mathematical modeling of robots interacting with complex dynamic environments, and proceeding to various concepts for interaction control design and implementation algorithms at different control layers. Focusing on the learning principle, it also shows the application of new and advanced learning algorithms for robotic contact tasks.

No political concept is more used, and misused, than that of democracy. Nearly every regime today claims to be democratic, but not all 'democracies' allow free politics, and free politics existed long before democratic franchises. This book is a short account of the history of the doctrine and practice of democracy, from ancient Greece and Rome through the American, French, and Russian revolutions, and of the usages and practices associated with it in the modern world. It argues that democracy is a necessary but not a sufficient condition for good government, and that ideas of the rule of law, and of human rights, should in some situations limit democratic claims. any scientific work. In the field of photonics, a wide range of numerical methods are used for studying both fundamental optics and applications such as design, development, and optimization of photonic components. Modeling is key for developing improved photonic devices and reducing development time and cost. Choosing the appropriate computational method for a photonics modeling problem requires a clear understanding of the pros and cons of the available numerical methods. Numerical Methods in Photonics presents six of the most frequently used methods: FDTD, FDFD, 1+1D nonlinear propagation, modal method, Green's function, and FEM. After an introductory chapter outlining the basics of Maxwell's equations, the book includes self-contained chapters that focus on each of the methods. Each method is accompanied by a review of the mathematical principles in which it is based, along with sample scripts, illustrative examples of characteristic problem solving, and exercises. MATLAB® is used throughout the text. This book provides a solid basis to practice writing your own codes. The theoretical formulation is complemented by sets of exercises, which allow you to grasp the essence of the modeling tools.

Whatever your age, becoming a mum for the first time brings with it excitement, anxiety and numerous challenges. But how do you cope when, to top it all, you discover you are old enough to be the mother of everyone else in your NCT group? The story of one woman, one new baby, a slipped disc and rather too many wrinkles, *The Secret Diary of a New Mum (Aged 43 1/4)* follows the tale of a midlife mum as she tries to make the transition from experienced TV producer to utterly inexperienced parent. One in five babies is born to a mum over 35, and the number of over 40s giving birth has doubled. The first humorous narrative account of what it's really like to be a midlife mum - whether it's deftly side-stepping any questions about age and baby number two or weeping as younger counterparts ping back into their size ten jeans within thirty seconds of giving birth - this is the thoroughly entertaining, insightful and often hilarious account of what happens as you face up to menopause and new motherhood at the same time.

### **Abbie Rose and The Magic Suitcase: Picking Up A Penguins Egg Really Got Me Into trouble**

In recent years, the study of unnatural narratives has become an exciting new but still disparate research program in narrative theory. For the first time, this collection of essays presents and discusses the new analytical tools that have so far been developed on the basis of unnatural novels, short stories, and plays and extends these findings through analyses of testimonies, comics, graphic novels, films, and oral narratives. Many narratives do not only mimetically reproduce the world as we know it but confront us with strange narrative worlds which rely on principles that have very little to do with the actual world around us. The essays in this collection develop new narratological tools and modeling systems which are designed to capture the strangeness and extravagance of such anti-realist narratives. Taken together, the essays offer a systematic investigation of anti-mimetic techniques and strategies that relate to different narrative parameters, different media, and different periods within literary history.

How can countries verify compliance with the Comprehensive Nuclear-Test-Ban Treaty (CTBT) and detect and deter violations? It is in their interest to increase their verification readiness because the assessment of compliance with the treaty rests with states parties to the CTBT. The treaty provides countries with two verification elements: an international system of monitoring stations, and an on-site inspection regime. The monitoring system can detect nuclear explosions underground, in the atmosphere and under water. This book provides incentives to nations around the world on how they can organize their efforts to verify compliance with the CTBT and how they can collaborate with other countries, perhaps on a regional basis, to monitor areas of concern. Such focused efforts can improve their detection and deterrence capabilities through precision monitoring. The book addresses the CTBT verification from the perspective of countries. It shows how they can create the essential tools for the assessment of the large amounts of data available from the verification regime and other sources, including observations from satellites and thousands of stations outside of the treaty regime. Countries can also use current scientific and technological developments to assist them in verifying compliance with the treaty. The book offers political and scientific analysis on the evolution of the treaty over the years. The book is intended for professionals in the political, diplomatic, scientific and military fields who deal with international security, non-proliferation and arms control. It is also intended for non-governmental organizations and journalists seeking a better understanding of the nuclear test ban issue and how states can verify compliance with the treaty.

Ancient peoples regarded names as indicative of character and destiny. The Jews were no exception. This is a critical study of ancient exegesis of the title 'Israel' and the meanings attributed to it among Jews down to Talmudic times, along with some early Christian materials. C. T. R. Hayward explores ancient etymologies of 'Israel', and the utilization of these very varied explanations of the name in sustained works of exegesis like Jubilees; the writings of Ben Sira, Philo, and Josephus; and selected Rabbinic texts including Aramaic Targumim. He also examines translational works like the Septuagint, to illuminate those writings' sense of what it meant to be a Jew.

Speech is the principal supporting medium of language. In this book Pierre-Yves Oudeyer considers how spoken language first emerged. He presents an original and integrated view of the interactions between self-organization and natural selection, reformulates questions about the origins of speech, and puts forward what at first sight appears to be a startling proposal - that speech can be spontaneously generated by the coupling of evolutionarily simple neural structures connecting perception and production. He explores this hypothesis by constructing a computational system to model the effects of linking auditory and vocal motor neural nets. He shows that a population of agents which used holistic and unarticulated vocalizations at the outset are inexorably led to a state in which their vocalizations have become discrete, combinatorial, and categorized in the same way by all group members. Furthermore, the simple syntactic rules that have emerged to regulate the combinations of sounds exhibit the fundamental properties of modern human speech systems. This original and fascinating account will interest all those interested in the evolution of speech.

Freight Transport and the Modern Economy adapts a well-known textbook by Michel Savy, revising, extending and updating it for British, European and international readers. It deals not only with the technical aspects of transport, logistics and supply chain management, but also the interactions between transport professionals and the public authorities in the modern social, political, economic and environmental context. The transport of freight is presented as a system, mixing empirics and theory, showing how transport itself functions and also its strong influence on the modern economy, with a growing volume of production, turnover and employment. The nature of freight transport, an industrial process widely marketed as a service, is analysed in depth, explaining the main characteristics of the transport operation, its market and the regulatory context. The main actors, the professional actors (carriers, shippers and other agents) and the public authorities are introduced, and their behaviour and interactions are

clarified. This comprehensive approach allows the reader to go further and consider in particular the approaches and practices of transport by carriers, customers, logistics managers, political decision makers and citizens, to tackle long range issues such as the 'decoupling' of production and transport recommended by some institutions and experts, and to explore the need for more infrastructure, or the capacity of the freight transport industry to reduce its contribution to pollution and climate change. This book treats freight transport as a whole system in its technical, economic, social, political and environmental context, in contrast to existing transport literature focused on individual aspects, such as transportation planning (usually for cars or passengers), logistics (essentially management issues), or individual transport modes. This book is comprehensive in its treatment of freight transport and in its use of multiple disciplinary perspectives.
