Urban Poverty in China Lolito

Urban Poverty in China

Age is just a number... Lolito is an unconventional love story about a fifteen-year-old boy who finds solace in the arms of a middle-aged woman on the Internet. Fifteen-year-old Etgar Allison is spending spring break alone in an empty house, when he inadvertently learns that his girlfriend has cheated on him with another boy. Heartbroken and lonely, without parental supervision, he turns to alcohol. Unable to cope with his grief, he looks to the Internet for comfort and lands in an adult chatroom. There he meets Macy, a bored but attractive housewife; flirtatious IMs escalate into cybersex chats and soon Etgar is raiding his savings account for a romantic rendezvous in London. . . What could possibly go wrong? Ben Brooks's Lolito is an uncompromising look at the turbulent emotional life of teenage boys, a funny and poignant story that injects raw honesty—and even a little tenderness—into its portrait of a taboo relationship.

Lolito

Wow! What a tour de force! This timely, masterly work does everything, from broad empirical comparison to theory, quantitative correlation to case studies of neighborhoods and quotations from individual life histories. Its findings from 25 neighborhoods in six cities demonstrate convincingly that urban destitution is not homogeneous, is concentrated in and generated by location, and has patterned institutional roots that produced varying processes of pauperization. This superb book must put to rest once and for all references to Chinese poverty as a matter of just the rural areas and their residents. Dorothy J. Solinger, University of California, Irvine, US Market reform has brought new forms of poverty to urban China, even while the standard of living of most urban residents has greatly improved. This research uses interviews with people in six cities to document their situation and to show how poverty is rooted in the failure of support systems in their neighborhoods and communities. It offers a stark evaluation of a system of inequalities that is only beginning to be addressed by state policy. John R. Logan, Brown University, US Urban poverty is an emerging problem. This book explores the household and neighbourhood factors that lead to both the generation and continuance of urban poverty in China. It is argued that the urban Chinese are not a homogenous social group, but combine laid-off workers and rural migrants, resulting in stark contrasts between migrant and workers neighbourhoods and villages. The expert authors examine the new urban poor in China and the dynamics of their poor neighbourhoods, highlighting both household experience and neighbourhood changes affecting the urban poor. Urban Poverty in China is based upon a comprehensive household survey in six Chinese cities and

provides insights into microscopic and neighbourhood-level poverty dynamics. The comprehensive study explores the spatial implications such as concentration of poverty as well as the differentiation within poor neighbourhoods. This informative book tells an insightful story about evolving urban poverty in Chinese cities that will be invaluable to researchers and postgraduate students within urban studies, geography, social policy and development studies as well as Chinese and Asian studies. It will also prove to be an invaluable read for researchers in urban and social development and international development agencies.
