McMahon (Institute for Sustainability and Technology Policy, Murdoch U., Australia) argues that the combination of power, usually in the form of wealth, and the availability of information technology has enabled the growth of large hierarchies throughout history. Speaking of social control in terms of a system of influences, commands, and feedback, he examines how information revolutions from the advent of telecommunications to the current global information web have conditioned efforts to attempts to impose systemic order on world social relations. He describes this process as one that has alternated between periods of relatively peaceful hegemony and open, international warfare, but has had a broad trend towards deep systematization over time in terms of market formation, mass industrialization, and cyber-financial coordination.
