The emergence and refinement of techniques in molecular biology has changed our perceptions of medicine, agriculture and environmental management.

Scientific breakthroughs in gene expression, protein engineering and cell fusion are being translated by a strengthening biotechnology industry into revolutionary new products and services. Many a student has been enticed by the promise of biotechnology and the excitement of being near the cutting edge of scientific advancement. However, graduates trained in molecular biology and cell manipulation soon realise that these techniques are only part of the picture. Reaping the full benefits of biotechnology requires manufacturing capability involving the large-scale processing of biological material. Increasingly, biotechnologists are being employed by companies to work in co-operation with chemical engineers to achieve pragmatic commercial goals. For many years aspects of biochemistry and molecular genetics have been included in chemical engineering curricula, yet there has been little attempt until recently to teach aspects of engineering applicable to process design to biotechnologists. This textbook is the first to present the principles of bioprocess engineering in a way that is accessible to biological scientists. Other texts on bioprocess engineering currently available assume that the reader already has engineering training. On the other hand, chemical engineering textbooks do not consider examples from bioprocessing, and are written almost exclusively with the petroleum and chemical industries in mind. This publication explains process analysis from an engineering point of view, but refers exclusively to the treatment of biological systems. Over 170 problems and worked examples encompass a wide range of applications, including recombinant cells, plant and animal cell cultures, immobilised catalysts

as well as traditional fermentation systems. * * First book to present the principles of bioprocess engineering in a way that is accessible to biological scientists * Explains process analysis from an engineering point of view, but uses worked examples relating to biological systems * Comprehensive, single-authored * 170 problems and worked examples encompass a wide range of applications, involving recombinant plant and animal cell cultures, immobilized catalysts, and traditional fermentation systems * 13 chapters, organized according to engineering sub-disciplines, are grouped in four sections - Introduction, Material and Energy Balances, Physical Processes, and Reactions and Reactors * Each chapter includes a set of problems and exercises for the student, key references, and a list of suggestions for further reading * Includes useful appendices, detailing conversion factors, physical and chemical property data, steam tables, mathematical rules, and a list of symbols used * Suitable for course adoption - follows closely curricula used on most bioprocessing and process biotechnology courses at senior undergraduate and graduate levels.

Unlike an operation to catch rabbits, trapping an elephant calls for expertise over enthusiasm. Those who hunt rabbits are rarely able to rope in elephants. In *The Elephant Catchers*, Subroto Bagchi distills his years of on-the-ground learning to explore what organizations and their people must do to climb to the next level and beyond. Through a combination of engaging anecdotes from his experiences as co-founder, and subsequently Chairman, of Mindtree Ltd, as well as practical advice on growth-related issues such as dealing with consultants or navigating strategy traps and M&As, Bagchi demonstrates a crucial point: Organizations with real ambition to get to the top need to embrace the idea of scale. The book leads you to evaluate: ? Is your organization's infrastructure designed to evolve and ultimately mimic the simultaneity of a living organism? ? Are you constantly nurturing and renewing your brand identity or letting it stagnate and decay? ? Does your sales force have as many hunters as it has farmers? Or is it dominated by a grizzly who just waits for the salmon to land in its mouth? ? In a fiercely competitive environment, are you really stepping `out of the box? and learning from unusual sources? Engaging, wise and thoroughly accessible, this book is a must-read for everyone in every organization seeking breakout success.

Few sporting classics last 100 years and fewer still continue to attract global interest in the way the Isle of Man TT does. The Tourist Trophy originated as a car race in 1904 but has been the domain of motorcycles since 1907. It is widely regarded as the last of the great road races in motor sport, annually drawing thousands of dedicated fans to a gem of an island in the middle of the Irish Sea. Steeped in nostalgia and brimming with atmosphere, controversy and spine-chilling action, the magic of the oldest race on the international calendar is captured in a neatly-sized book packed with 120 monochrome and full colour images. TT Centenary goes right back to the original St John's Course and also includes images from the Clypse Course used for a short period in the 1950's. The awesome 37.7 mile Snaefell Mountain Course, which was the home of the British Motorcycle Grand Prix for four decades, remains the ultimate challenge to every discerning road racer.

Ours is the era of "reinvention". From psychotherapy to life coaching, from self-help manuals to cosmetic surgery, and from corporate rebranding to urban redesign: the art of reinvention is inextricably interwoven with the lure of the next frontier, the breakthrough to the next boundary – especially boundaries of the self. In this new, updated edition of this remarkable book, Anthony Elliott examines "reinvention" as a key buzzword of our times. Through a wide-ranging and impassioned assessment, Elliott unmask the ever-increasing globalization of reinvention – from reinvention gurus to business reinvention, from personal makeovers to corporate rebrandings. In doing so, he undertakes a serious if often amusing consideration of contemporary reinvention practices, including super-fast

weight loss diets, celebrity makeovers, body augmentations, speed dating, online relationship therapies, organizational restructurings, business downsizings and many more. The second edition of Reinvention includes a new chapter on the digital revolution and artificial intelligence, which situates reinvention within the context of technological automation. There is also a discussion of how the Covid-19 global pandemic has impacted today's cultures of reinvention. In addition, there is a new concluding chapter in which the author develops further his theoretical account of the nature of reinvention societies. This absorbing book will continue to be the ideal introduction to reinvention for students and general readers alike. Reinvention offers a provocative and radical reflection on an issue (sometimes treated as trivial in the public sphere) that is increasingly politically urgent in terms of its personal, social and environmental consequences.
