Speech and Language Engineering

The key ideas of Jacques Derrida in his essays "Structure, Sign

and Play in the Discourse of the Human Sciences" and "Différance"

Offering insight into linguistic practices resulting from different kinds of Palestinian-Israeli contact, this book examines a specific conceptualisation of the link between the political and economic contexts and human practices, or between structure and agency, termed "articulation". The contexts of the military occupation, a shared consumer market, controlled cheap labour migration, and the provision of social services, supply the setting for power relations between Israelis and Palestinians which give rise to a variety of linguistic practices. Among these practices is the borrowing of Hebrew words and phrases for use in Palestinians' Arabic speech. Hebrew borrowings can demarcate in-groups, signal aspirations to a modern lifestyle, and give a political edge to humour. Nancy Hawker's explanation for these practices moves away from the notions of conflict and national identity and gives prominence to Palestinian and Israeli ideologies that inform the conceptual experience of Palestinians. Addressing an understudied linguistic situation, Palestinian-Israeli Contact and Linguistic Practices brings us documentation and analysis of recent casework, firmly anchored in empirical results from fieldwork in three refugee camps in the Occupied Palestinian Territories. Combining sociolinguistics with politics, economics, sociology and philosophy this book will be of great interest to students and scholars of Middle

East Studies, Linguistics and Political Theory.

Exploring Language and Linguistics

Introducing the dynamic study of a literary period stretching from 1900 to the Second World War, the book reflects the exciting mix of European avant-garde, writers of the Harlem Renaissance and regional voices within Britain. Three distinct sections explore the major concepts, themes and issues that characterise the literature.

Linguistic Terms and Concepts

Efficient processing of speech and language is required at all levels in the design of human-computer interfaces. In this perspective, the book provides a global understanding of the required theoretical foundations, as well as practical examples of successful applications, in the area of human-language technology. The authors start from acoustic signal processing to pragmatics, covering all the important aspects of speech and language processing such as phonetics, morphology, syntax and semantics.

Key Concepts in Sports Studies

Essay from the year 2019 in the subject Philosophy - Philosophy of the 20th century, Sultan Moulay Sliman University, language: English, abstract: This paper tends to deal mainly with Derrida's both essays of "Structure, Sign and Play in the Discourse of the Human Sciences" and "Différance". It tries to show some of his key ideas and his outstanding status in the postmodern school of thought in the light of his aforementioned essays. The first things that come to our minds when we hear the name of Jacques Derrida are Deconstruction, Différance, Post-structuralism, Post-modernism, Writing and Differance, Of Grammatology and so on. This illustrates that we are already familiar with Derrida. However, the majority of people complain about Derrida's complexity of his writings as well as the difficulty of translating his works. One of the most illustrative examples is the preface of Gayatri Chakravorti Spivak to Derrida's "Of Grammatology" in which she states "when the preface is being written by someone other than the author, the situation is yet further complicated. A pretense at writing before a text that one must have read before the preface can be written". Spivak's statement is a real example of the inseparable relationship between reading and writing. Reading is breathing in whereas writing is breathing out. Alan Bass, a translator of Derrida, suggests that the difficulty to read Derrida is not a question of his style of writing but rather Derrida challenges the way we are used to read. Besides, Alan Bass compares the translator of Derrida to a psychoanalyst in the sense that the translator must understand the syntax and lexicon of the original text in order to transform it through his own language. This is quite analogous with the attempt of

the psychoanalyst to translate the language of dreams into a latent language.

Key Concepts in Modernist Literature

The Oxford Handbook of Cognitive Linguistics presents a comprehensive overview of the main theoretical concepts and descriptive/theoretical models of Cognitive Linguistics, and covers its various subfields, theoretical as well as applied. The first twenty chapters give readers the opportunity to acquire a thorough knowledge of the fundamental analytic concepts and descriptive models of Cognitive Linguistics and their background. The book starts with a set of chapters discussing different conceptual phenomena that are recognized as key concepts in Cognitive Linguistics: prototypicality, metaphor, metonymy, embodiment, perspectivization, mental spaces, etc. A second set of chapters deals with Cognitive Grammar, Construction Grammar, and Word Grammar, which, each in their own way, bring together the basic concepts into a particular theory of grammar and a specific model for the description of grammatical phenomena. Special attention is given to the interrelation between Cognitive and Construction Grammar. A third set of chapters compares Cognitive Linguistics with other forms of linguistic research (functional linguistics, autonomous linguistics, and the history of linguistics), thus giving a readers a better grip on the position of Cognitive Linguistics within the landscape of linguistics at large. The remaining chapters apply these basic notions to various more specific linguistic domains, illustrating how Cognitive Linguistics deals with the traditional linguistic subdomains (phonology, morphology, lexicon, syntax, text and discourse), and demonstrating how it handles linguistic variation and change. Finally they consider its importance in the domain of Applied Linguistics, and look at interdisciplinary links with research fields such as

philosophy and psychology. With a well-known cast of contributors from around the world, this reference work will be of interest to researchers and advanced students in (cognitive) linguistics, psychology, cognitive science, and anthropology.
