A dazzling tribute to the KTM X-Bow car – the world’s first production sports car with a full carbon composite monocoque. To fully understand and enjoy this car, it can, and should be appreciated on many different levels: a racing car for the road, and a road car that can excel on the track; its unique composition and aerodynamic qualities; its design and aesthetics. This is a car that was brought to life by the virtually unlimited monetary resources of an industrial giant, steeped in motorsport, who demanded that it be technologically cutting-edge. The car was honed to perfection by arguably the finest racing car engineers in the world, for whom ‘best in class’ was a minimum requirement. It is an objet d'art that can race in anger, or can transport in style. It startles, it fascinates, it wins. As Mr Toad (of Wind in the Willows fame) would undoubtedly have said, it is "A Most Unusual Car!" – we are lucky that this most unusual car, the KTM X-BOW, exists in our lifetime. This book details the design and development, the build process, racing history, and what it’s like to live with and maintain an X-Bow, written by joint owners and enthusiasts, with the full cooperation of the designers and developers.

Suspension is probably the most misunderstood aspect of motorcycle performance. This book, by America's premier suspension specialist, makes the art and science of suspension tuning accessible to professional and backyard motorcycle mechanics alike. Based on Paul Thede's wildly popular Race Tech Suspension Seminars, this step-by-step guide shows anyone how to make their bike, or their kid's, handle like a pro's. Thede gives a clear account of the three forces of suspension that you must understand to make accurate assessments of your suspension's condition. He outlines testing procedures that will help you gauge how well you're improving your suspension, along with your riding. And, if you're inclined to perfect your bike's handling, he even explains the black art of chassis geometry. Finally, step-by-step photos of suspension disassembly and assembly help you rebuild your forks and shocks for optimum performance. The book even provides detailed troubleshooting guides for dirt, street, and supermoto--promising a solution to virtually any handling problem.

Riding motorcycles is fun, but author Ken Condon maintains that there is a state of consciousness to be achieved beyond the simple pleasure of riding down the road. Riding in the Zone helps riders find that state of being. It's the experience of being physically and mentally present in the moment, where every sense is sharply attuned to the ride. Your mind becomes silent to the chatter of daily life, and everyday problems seem to dissolve. You feel a deeper appreciation for life. Your body responds to this state of being with precise, fluid movements, you feel in balance, your muscles are relaxed, and it seems as though every input you make is an expression of mastery. This is "the Zone." Condon identifies all of the factors that affect entering the Zone and addresses each one individually, from the development of awareness and mental skills to mastering physical control of the motorcycle. At the end of each chapter are drills designed to transform the book's ideas into solid, practical riding skills. Riding in the Zone takes riders to the next level in their skill set.
