This textbook is designed for undergraduate courses

as biotechnology, polymer technology, petrochemical engineering, electrochemical engineering, environmental engineering, safety engineering and industrial chemistry. The chief objective of this text is to prepare students to make analysis of chemical processes through calculations and also to develop in them systematic problem-solving skills. The students are introduced not only to the application of law of combining proportions to chemical reactions (as the word 'stoichiometry' implies) but also to formulating and solving material and energy balances in processes with and without chemical reactions. The book presents the fundamentals of chemical engineering operations and processes in an accessible style to help the students gain a thorough understanding of chemical process calculations. It also covers in detail the background materials such as units and conversions, dimensional analysis and dimensionless groups, property estimation, P-V-T behaviour of fluids, vapour pressure and phase equilibrium relationships, humidity and saturation. With the help of examples, the book explains the construction and use of reference-substance plots, equilibrium diagrams, psychrometric charts, steam tables and enthalpy composition diagrams. It also elaborates on thermophysics and thermochemistry to acquaint the students with the thermodynamic principles of energy balance calculations. Key Features :

- SI units are used throughout the book.
- Presents a thorough introduction to basic chemical engineering principles.
- Provides many worked-out examples and exercise problems with answers.
- Objective type questions included at the end of the book serve as useful review material and also assist

A trace element (TE) is a chemical element presented below ~ 0.1 wt. % and required in minute quantities to maintain proper physical functioning. TE analysis in clinical samples (plasma, urine, cerebro-spinal fluid, full-term placenta, hair, nails, buccal mucosa, semen, biopsy specimens) has received increasing attention. Based on 62 sources, current effort presents comparative knowledge about the attempts to accurately trace TE in clinical samples through Vis/NIR, PIXE, TXRF, GFAAS, ICP-MS. It informs the need for further research adjustments to reveal the reciprocal states of certain TE (Cu/Zn, Ca/Mg, Fe/ Pb) in correlation with their real-time counts in both maternal and neonatal umbilical cord plasma, and in relation to augmented oxidative stress. This would help to achieve consistency in interpreting obstetrical complications (preeclampsia, prematurity, or gestational diabetes). Generated hypotheses should target plausible mechanisms behind TE alterations

MEDIEVAL MUSIC, MAGICAL MINDS It has only been since the Age of Reason that human beings consider music to be strictly an aesthetic experience. Up until that time, however, music was both intended and designed to have a specific effect upon the mind and emotions of the listener. Religious chant was designed to raise consciousness. Dance music was meant to celebrate fertility, both human and that of the Earth, and to bring earthly joy and ecstasy to those both dancing and listening. This groundbreaking book fulfills two purposes. The first is to introduce interested musicians to the increasingly-popular field of medieval music. The second is to trace the history of all music, as well as its effect upon the level of awareness of the listeners. Internationally-noted soprano Mary Devlin, a great lover of medieval music expounds upon both her studies and her experience with that genre to try to recreate the thoughts and feelings of the people in the Middle Ages who once composed, performed, and lived that music.

After a public legal fight with Blade Nzimande, and losing his job as CEO of Services SETA, Ivor Blumenthal finally writes a book that addresses the circumstances of his leaving, and the state of the Services SETA as he left it. In simple terms, Blumenthal describes the warts that popped up in the system - from racist and gender bias to the inordinate

expensive of it, serving only a narrow segment of South African society. Blumenthal concludes that, historically, the industrial framework in this country was established to benefit the few at the expense of the many. Through a blow-by-blow, chronological review of his time at the head of the Services SETA, the book clearly points out the system faults, as well as those of government. 50 Shades of Greed looks at the pre-1994 history of the Services SETA, and why it needed to change drastically. Blumenthal then moves on to discuss the changes implemented - from the new mandate, and how it was carried out, to the key players and new-found successes. Though it deals with all that was wrong with the system, 50 Shades of Greed is also redemptive as it takes an in-depth look at the Services SETA, and the wide-scale re-development of the Skills Development Framework. Finally, 50 Shades of Greed undertakes a post-2010 analysis of what remains of the Services SETA system, how different it is from the original ineffective mandate, and its success rate .

What Remains

The 650th anniversary of the foundation of Wingfield College was the occasion for a special two-day symposium marking the culmination of a three-year UEA-funded research project into the college and castle. The building projects of the late medieval aristocracy focused on their homes and the monasteries, churches or chantry foundations under their patronage where their family were buried and commemorated. This commemoration allowed a visual celebration of their achievements, status and lineage, the scale and prestige of which reflected on the fortunes of the family as a whole. Wingfield is explored in the context of both the actual building of the castle, chantry chapel and the college, and that of the symbolic function of these as a demonstration of aristocratic status. The contributions to this book examine many topics which have hitherto been neglected, such as the archaeology of the castle, which had never been excavated, the complex history of the college's architecture, and the detailed study of the monuments in the church. The latest techniques are used to reconstruct the college and castle, with a DVD to demonstrate these. And the context of the family and its fortunes are explored in chapters on the place of the de la Poles in fifteenth century history, as soldiers, administrators and potential claimants to the throne.

Phospholipid technology and applications is an essential reference for technologists developing food and cosmetics products, scientists researching phospholipids in biological and food systems, technologists in fats and oils refining, and scientists developing drugs and drug delivery systems and carriers. The major source of phospholipids is the lecithin recovered during degumming of vegetable oils, particularly soybean oil. This crude material finds uses in its own right but can be purified through a series of processes which eventually lead to individual phospholipid classes such as phosphatidylcholines. It is widely accepted that oil and water do not mix but there are several areas in science and technology where these two distinct phases must coexist in stable emulsions. This is achieved by admixture of amphiphilic molecules of which the phospholipids are important natural examples. Today, phospholipids find many uses in the food industry and in other industries which exploit the amphiphilic nature of

these compounds. Further, there are now important procedures by which their amphiphilicity can be optimized for different uses. The early chapters in this book are devoted to the more common glycerol-based phospholipids and cover their structure, source, composition, modification by chemical and enzymatic methods, their physical, chemical, and nutritional properties, and their major uses. The final chapter is devoted to another kind of phospholipid, the sphingolipids, in which there is a growing interest.

As a leading Confederate general, Braxton Bragg (1817–1876) earned a reputation for incompetence, for wantonly shooting his own soldiers, and for losing battles. This public image established him not only as a scapegoat for the South's military failures but also as the chief whipping boy of the Confederacy. The strongly negative opinions of Bragg's contemporaries have continued to color assessments of the general's military career and character by generations of historians. Rather than take these assessments at face value, Earl J. Hess's biography offers a much more balanced account of Bragg, the man and the officer. While Hess analyzes Bragg's many campaigns and battles, he also emphasizes how his contemporaries viewed his successes and failures and how these reactions affected Bragg both personally

and professionally. The testimony and opinions of other members of the Confederate army--including Bragg's superiors, his fellow generals, and his subordinates--reveal how the general became a symbol for the larger military failures that undid the Confederacy. By connecting the general's personal life to his military career, Hess positions Bragg as a figure saddled with unwarranted infamy and humanizes him as a flawed yet misunderstood figure in Civil War history.

Recently Anna Julia Cooper has emerged as the most important classic writer in the tradition of African American feminist thought. Mary Helen Washington described Cooper's work as "the most precise, forceful, well-argued statement of black feminist thought to come out of the nineteenth century." This is the first collection of all of Cooper's major writings, including many never before published. It includes all of the essays from her famous book, *A Voice from the South*, in addition to many other essays and letters accessible only in archives until now. The organization of this important new collection lends itself to a clearer understanding of the major themes and contributions of Cooper's thought, her development as a thinker and writer, and the critiques and controversies surrounding her work. Lemert and Bhan introduce Cooper as an activist, settlement founder, school teacher, college president, linguist, and scholar—a life that paralleled the prodigious accomplishments of W.E.B. Du Bois in so many ways.

There's nae power on earth can crush the men who can sing on a day like this. A powerful re-imagining of Joe Corrie's neglected classic about a Fife mining community during the General Strike. To raise funds for the soup kitchens feeding the miners and their starving families, Corrie wrote In Time O' Strife in 1926 whilst on strike himself, exposing the brutal lives of a family staring hunger and defeat in the face. Some 87 years later, Graham McLaren has adapted, designed and directed this rarely performed classic play. Created by Graham McLaren (Men Should Weep, A Christmas Carol), the production uses fragments of Corrie's other plays, poems and songs, celebrating his ability as a writer and his contribution to Scottish
