Managerial Economics

The sixties were a decade of major reform in the guidance of industry in the socialist countries of Eastern Europe. In this comparative study of industrial management, the different directions taken by reform in the German Democratic Republic, Hungary, and Yugoslavia are examined against the pattern shown by Romania, a country in which no significant reform has occurred. The author focuses on the methods used to coordinate enterprises in the early 1970s. The book is the product of a remarkable opportunity: eleven months of interviews in the four countries. Those interviewed were mainly middle and upper managers of enterprises, but also include officials of ministries, planning commissions, banks, trade unions, and national Communist parties. The resulting data made possible new interpretations of enterprise management in Eastern Europe. Originally published in 1976. The Princeton Legacy Library uses the latest print-on-demand technology to again make available previously out-of-print books from the distinguished backlist of Princeton University Press. These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions. The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905.

Managerial Economics & Organizational Architecture

Managerial Economics in a Global, 5e uses the theory of the firm as the unifying theme to examine the managerial decision process. Reflecting the internationalization of tastes, production, and distribution in today's globalizing world, the book integrates a fully global view into managerial economics. It introduces many exciting new topics and managerial tools into the study of managerial economics — topics not fully addressed in other texts — such as firm architecture, strategic behavior, business ethics, electronic commerce, risk management, international economies of scale, the virtual corporation, re-engineering, benchmarking, the learning organization, and the digital factory. In addition, the book illustrates how managerial decisions are actually made, with more relevant and interesting real-world case applications and integrative case studies than any other text on the market.

With two distinct objectives, this text's approach to managerial economics takes models from recent economics research and applies the research to the internal structure of a firm. After teaching basic applied economics, the authors look inside the firm and apply this analysis to management decision making. Authors Brickley, Smith, and Zimmerman contend that organizational architecture consists of three aspects of corporate organization: the assignment of decision rights within the company; methods of rewarding individuals; the structure of systems to evaluate the performance of both individuals and business units. These three components can be likened to a stool with three legs. If one of the legs is shorter, the stool is out of balance. These three elements must be in balance in the organization as well.

Managerial Economics for Decision Making

The most powerful force in the world economy today is the redefinition of the relationship between state and marketplace - a process that goes by the name of privatization though this term is inadequate to express its far-reaching changes. We are moving from an era in which governments sought to seize and control the 'commanding heights' of the economy to an era in which the idea of free markets is capturing the commanding heights of world economic thinking. Basic views of how society ought to be organized are undergoing rapid change, trillions of dollars are changing hands and so is fundamental political power. Great new wealth is being created - as are huge opportunities and huge risks. Taking a worldwide perspective, including Britain, where the process began with Mrs Thatcher, Europe and the former USSR, China, Latin America and the US, THE COMMANDING HEIGHTS shows how a revolution in ideas is transforming the world economy - why it is happening, how it can go wrong and what it will mean for the global economy going into the twenty-first century.
