What You Say is What You Get

This is the first comprehensive introduction to the

concepts, theories, and applications of pricing and revenue optimization. From the initial success of "yield management" in the commercial airline industry down to more recent successes of markdown management and dynamic pricing, the application of mathematical analysis to optimize pricing has become increasingly important across many different industries. But, since pricing and revenue optimization has involved the use of sophisticated mathematical techniques, the topic has remained largely inaccessible to students and the typical manager. With methods proven in the MBA courses taught by the author at Columbia and Stanford Business Schools, this book presents the basic concepts of pricing and revenue optimization in a form accessible to MBA students, MS students, and advanced undergraduates. In addition, managers will find the practical approach to the issue of pricing and revenue optimization invaluable. Solutions to the end-of-chapter exercises are available to instructors who are using this book in their courses. For access to the solutions manual, please contact marketing@www.sup.org.

This book analyzes the ideas central to the philosophy of Kant, Hegel, and Kierkegaard to show that they are biblical in origin, both ontologically and historically. Polka argues that Schopenhauer has an altogether false conception of the fundamental ideas of the Bible and of Christianity, which leaves his philosophy irredeemably contradictory.

Pablo Neruda is known first as a poet, but the prose pieces in this collection reflect the enormous hunger he demonstrated throughout his career for new modes of expression, new adventures, new challenges. *Passions and Impressions* is both a sequel to and an enlargement of Neruda's *Memoirs*, recording a lifetime of travel, of friendships and enmities, of exile and homecoming, of loss and discovery, and of history both public and personal. Above all, it is a testament to Neruda's love for Chile— for its citizens, its flora and fauna, its national identity. His abiding devotion pervades these notes on a life fully lived.

This book takes a pragmatic approach to deploying state-of-the-art optical networking equipment in metro-core and backbone networks. The book is oriented towards practical implementation of optical network design. Algorithms and methodologies related to routing, regeneration, wavelength assignment, sub rate-traffic grooming and protection are presented, with an emphasis on optical-bypass-enabled (or all-optical) networks. The author has emphasized the economics of optical networking, with a full chapter of economic studies that offer guidelines as to when and how optical-bypass technology should be deployed. This new edition contains: new chapter on dynamic optical networking and a new chapter on flexible/elastic optical networks. Expanded coverage of new physical-layer technology (e.g., coherent detection) and its impact on network design and enhanced coverage of ROADM architectures and properties, including colorless, directionless, contentionless and gridless. Covers 'hot' topics, such as Software Defined Networking and energy efficiency, algorithmic advancements and techniques, especially in the area of impairment-aware routing and wavelength assignment. Provides

more illustrative examples of concepts are provided, using three reference networks (the topology files for the networks are provided on a web site, for further studies by the reader). Also exercises have been added at the end of the chapters to enhance the book's utility as a course textbook.

Daily & Weekly Chore Chart

In this book, Nicolas Van de Walle identifies 26 countries that are extremely poor and grew little if at all in the 1990s. His sample excludes North Korea and countries where civil war explains some of their failure to grow (Afghanistan, Sierra Leone, Sudan,

Tajikistan and others). The 26 countries have limited infrastructure and human capital and the small size of their markets deter private savings and investment. Aid was meant to help overcome these problems, and these countries received a lot. Yet they have failed to grow. What is wrong? Is foreign aid a solution or part of the problem? What changes might make aid more effective? Given these countries require the financial and technical resources of the West, why haven't aid programs made a difference? Van de Walle blames their economic failure mostly on the venality and incompetence of their political leadership. He analyzes the contradictions and tensions faced by the aid community in poorly run countries, providing a sobering analysis of the perverse effects of aid where the politics is all wrong. Too often, resources provided by foreign aid keep the wrong government in office, and undermine adoption of economic as well as political reforms. Bad government combined with aid, in short, hurts poor countries - and particularly the poorest people in those countries. Despite good intentions, little progress has been made in implementing announced "reforms" of the aid business itself. A constituency for reform is lacking, in the donor countries and in the recipient countries, where those in power benefit from the status quo.
