Donna M. Mosch Craft Murdock retired in 2008 after teaching for 38 years in grades 4 - 6. As a graduate of Elmira College, her first 17 years were spent teaching in Elmira, NY for the Rochester Diocese. the remaining time was in Williamsburg, VA. During this time she took numerous courses from Shenandoah University and the College of William and Mary. She retired from York County School Division where she taught 5th grade. Her notes that she gave her math students (the basis for this book) have helped her many students excel on their 5th grade math SOL (Standard of Learning) test.

Intermediate Algebra is a book for the student. The authors' goal is to help build students' confidence, their understanding and appreciation of math, and their basic skills by presenting an extremely user-friendly text that models a framework in which students can succeed. Unfortunately, students who place into developmental math courses often struggle with math anxiety due to bad experiences in past math courses. Developmental students often have never developed nor applied a study system in mathematics. To address these needs, the authors have framed three goals for Intermediate Algebra: 1) reduce math anxiety, 2) teach for understanding, and 3) foster critical thinking and enthusiasm. The authors' writing style is extremely student-friendly. They talk to students in their own language and walk them through the concepts, explaining not only how to do the math, but also why it works and where it comes from, rather than using the "monkey-see, monkey-do" approach that some books take.

Political Theories of Decolonization provides an introduction to some of the seminal

texts of postcolonial political theory. The difficulty of founding a new regime is an important theme in political theory, and the intellectual history of decolonization provides a rich--albeit overlooked--opportunity to explore it. Many theorists have pointed out that the colonized subject was a divided subject. This book argues that the postcolonial state was a divided state. While postcolonial states were created through the struggle for independence, they drew on both colonial institutions and reinvented pre-colonial traditions. Political Theories of Decolonization illuminates how many of the central themes of political theory such as land, religion, freedom, law, and sovereignty are imaginatively explored by postcolonial thinkers. In doing so, it provides readers access to texts that add to our understanding of contemporary political life and global political dynamics.

A combination of a basic mathematics or prealgebra text and an introductory algebra text, Integrated Arithmetic and Basic Algebra, Third Edition, provides a uniquely integrated presentation of the material for these courses in a way that is

extremely beneficial to students. As opposed to traditional texts that present arithmetic at the beginning and algebra at the end, this text integrates the two whenever possible, so that students see how concepts are interrelated rather than learning them in isolation and missing the "big picture." The ideas and algorithms shared by arithmetic and algebra are introduced in an arithmetic context and then developed through the corresponding algebraic concept. For example, operations with rational numbers and rational expressions are discussed together, whereas most texts discuss operations with rational numbers early on and operations with rational expressions much later. The Jordan/Palow text helps students recognize algebra as a natural extension of arithmetic using variables. This approach aligns directly with NCTM and AMATYC standards, which suggest playing upon students' previous knowledge to teach new concepts.

KEY BENEFIT: Business Mathematics, Eleventh Edition maximizes interest by presenting the necessary mathematics through real-world applications. New examples from real companies and the people who run them are woven throughout the book to apply the concepts to real practices. Many new photographs, news clippings, and graphs have been added to increase the relevance of chapter content to the world of business. The globalization of our society is emphasized through examples and exercises that highlight foreign

countries and international topics. KEY TOPICS: Whole Numbers and Decimals; Fractions; Percent; Bank Services; Payroll; Mathematics of Buying; Mathematics of Selling; Simple Interest; Compound Interest; Annuities, Stocks, and Bonds; Business and Consumer Loans; Taxes and Insurance; Depreciation; Financial Statements and Ratios; Business Statistics. MARKET: For all readers interested in business mathematics.

â€œEmpower your Students for Successâ€ George Woodbury's Algebra Seriesempowers students for future success in college-level math courses through its early-and-often approach to functions and graphing, integrated study strategies, and quality exercise sets that encourage true conceptual understanding. The early-and-often approach to functionshelps students prepare for future math courses. A Study Skill Strategyis introduced in each chapter opener and then expanded upon throughout the chapter in the Building Your Study Strategyboxes that appear before each exercise set. Students can further develop their study skills with the Study Skills Workbook, written by Alan Bass, to accompany the Woodbury texts. KEY MESSAGE: Gary Rockswold and Terry Krieger focus on teaching algebra in context, giving readers realistic and convincing answers to the perennial question, “When will I ever use this?” The authors' consistent use of real data, graphs, and tables throughout the examples and exercise sets gives meaning to the numbers and equations as readers encounter them. This new edition further enhances Rockswold and Krieger's focus on math in the real world with new features and updated applications to engage today's readers. **KEY TOPICS:** Real Numbers and Algebra; Linear Functions and Models; Linear Equations and Inequalities; Systems of Linear Equations; Polynomial Expressions and Functions; Rational Expressions and Functions; Radical Expressions and Functions; Quadratic Functions and Equations; Exponential and Logarithmic Functions; Conic Sections; Sequences and Series **MARKET:** For all readers interested in algebra.

Elayn Martin-Gay's success as a developmental math author starts with a strong focus on mastering the basics through well-written explanations, innovative pedagogy and a meaningful, integrated program of learning resources. The revisions to this edition provide new pedagogy and resources to build reader confidence and help readers develop basic skills and understand concepts. Features incorporation of AMATYC and NCTM standards-reflected in an increased emphasis on visualization graphing, and data analysis. In addition, Martin-Gay's 4-step problem solving process-Understand, Translate, Solve and Interpret-is integrated throughout. Also includes new features such as Study Skills Reminders, "Integrated Reviews", and "Concept Checks." For those in need of a graphing utility

The BPB team has created a book where the use of the graphing calculator is optional but visualizing the mathematics is not. By creating algebraic visual side-by-sides to solve various problems in the examples, the authors show students the relationship of the algebraic solution with the visual, often graphical, solution. In addition to helping students visualize the math with side-by-sides, the authors focus on helping students make the connection between x-intercepts, zeros, and solutions, both visually and algebraically.
