A comprehensive reference work: This looseleaf work is an authoritative compilation of methods for the detection of autoantibodies (Section A: Methods of Autoantibody Detection); the structure, function, and molecular and biochemical concepts of autoantigens (Section B: Autoantigens); and the clinical significance of measuring autoantibodies in patients with rheumatic, connective tissue and autoimmune diseases (Section C: Clinical Significance of Autoantibodies). This unique work brings together all the molecular and medical information - very difficult to retrieve otherwise - in ONE publication. The Editors and contributors are leading experts in the immunological, molecular biological, and clinical fields. The format of this looseleaf publication allows regular updating of data as well as inclusion of new advances in research on autoimmunity. Until now, the work (Basic work including Supplement 1) included Section A, and the larger part of Section B, both in an attractive and robust ringbinder. Audience: By nature and design of this exciting reference work, it is especially aimed at scientists, including immunologists, pathologists and molecular biologists, and clinical chemists, as well as clinicians specializing in rheumatic diseases and autoimmune disorders,

inflammation or clinical immunology. Supplement 2: This supplement primarily contains Section C (Clinical Significance of Autoantibodies). As in the other sections, the contents are presented in a consistently structured manner, beautifully illustrated with photos and schematic figures. Extensive literature references are provided. Also, this supplement includes an addition to Section B (Autoantigens), being chapter B.1.5: The Antigens Defined by Antikeratin Antibodies (AKA).

Now in its third edition, this trusted clinical guide enables both the busy practitioner and student to review or to learn about a range of pathologies, conditions, examinations, diagnostic procedures, and interventions that can be effectively used in the physical rehabilitation of older people. It presents a broad overview of age-related physiological changes

as well as specific professional discipline perspectives. Organized into eleven distinct and interrelated units, the first unit begins with key anatomical and physiological considerations seen with aging which have significant impact on the older person. The second and third units go on to review important aging-related conditions and disorders of the musculoskeletal and neuromuscular/neurological systems respectively. Neoplasms commonly encountered in older people are the focus of the fourth unit; while aging-related conditions of the cardiovascular, pulmonary, integumentary and sensory systems are presented in units five through seven. Unit eight highlights a range of specific clinical problems and conditions commonly encountered with older patients. Critically, all of these units emphasize important examination and diagnostic procedures needed for a thorough evaluation and stress interventions that can be of significant benefit to the older patient. The ninth unit presents select physical therapeutic interventions that are especially important in managing rehabilitative care. Key societal issues related to aging are discussed in the tenth unit. Finally, the concluding eleventh unit focuses on the successful rehabilitation team that includes both professional and non-professional caregiver members. A trusted guide to the conditions and problems faced when evaluating and treating geriatric patients Extensive coverage over 84 chapters, each written by an expert in the field Includes imaging, vision and the aging ear Cross-referenced - providing the complexity and inter-relatedness of co-morbidities common to aging patients Collaborative international perspective

Chapters on the aging spine; frailty; safe pilates for bone health; health care for older people Additional renowned editor - Ronald W. Scott Revised title to reflect the comprehensive scope of content covered (previously entitled Geriatric Rehabilitation Manual)

This resources manual provides comprehensive

guidance at an international level in many aspects of nuclear medicine practice, including education, training, facilities and equipment, quality systems, and radiopharmacy and clinical practice. The manual has been written with routine clinical practice in mind and therefore provides advice on many practical points that should help both new and also more developed nuclear medicine centres. The new centres will find specific information essential for setting up the provision of the service, and the more developed centres will find numerous updated protocols and suggestions on improving operational performance

Problems contacting emergency services and delayed assistance are not unusual when incidents occur in rural areas, and the consequences can be devastating, particularly with mass casualty incidents. The IOM's Forum on Medical and Public Health Preparedness for Catastrophic Events held a workshop to examine the current capabilities of emergency response systems and the future opportunities to improve mass casualty response in rural communities.

Nuclear Medicine Resources Manual

The most comprehensive hazmat emergency response training manual following NFPA and OSHA competency criteria The choice of firefighters and other rapid response personnel for years, this user friendly manual helps first responders build their skills step-by-step to professionally handle any hazmat emergency. Organized to enhance understanding and retention—and reinforced with copious illustrations, photographs, learning exercises, and case studies—this book takes the reader from preplanning to dispatch to the stabilization of an incident, and on to post-incident critique and follow-up. New material addresses advances in protective clothing, new products for confinement and containment, and changes in the OSHA Respiratory Protection Standard, plus much more. Additional chapters cover WMDs, with sections specific to WMD response including site control, personal protective equipment, and decontamination.
