The Gun Digest Book of Exploded Gun Drawings

What can the United States learn from other militaries about how better to prepare for full-spectrum operations and deployments? The authors examine the militaries of China, France, the UK, India, and Israel to (1) identify different approaches to readiness, adaptability, and operational issues and (2) assess the ways in which units are trained both for specific and general deployments and for train, advise, and assist missions.

Shooters, gunsmiths, and collectors alike will find the revised version of Gun Digest's Book of Rimfire Rifles Assembly/Disassembly a practical reference for disassembling and reassembling a variety of rimfire rifles. Step-by-step high-resolution photography and clear, simple text makes it easy to disassemble and reassemble a wide-range of modern and vintage models. Kevin Murumatsu has over 40 years of gunsmithing experience and it shows through reassembly tips, which overcome each model's specific reassembly hurdles.

Lessons of the 2006 Israeli-Hezbollah War

The contributors to this book emphasize a mix of heritage and history as the primary leitmotif for contemporary border rivalries and dynamics. Whether the

region's 11 states want it or not, their bordered identity is falling into ever sharper definition-if only because of pressure from extraregional states. Chapters are organized by country to elicit a broad range of thought and approach as much as for the specific areas or nation-states examined in each chapter. This book aims to provide new ways of looking at the reality and illusion of bordered Southeast Asia. Edited by James Clad, Sean M. McDonald, and Bruce Vaughn, with contributions from: Zachary Abuza, Richard P. Cronin, David Lee, Rhoda Margesson, Dick K. Nanto, Patricia O'Brien, David Rosenberg, Carlyle A. Thayer, Michael Wood.

Since the early 1980s, a prominent and consistent conclusion drawn from research on China's defense-industrial complex has been that China's defense-production capabilities are rife with weaknesses and limitations. This study argues for an alternative approach: From the vantage point of 2005, it is time to shift the focus of current research to the gradual improvements in and the future potential of China's defense-industrial complex. The study found that China's defense sectors are designing and producing a wide range of increasingly advanced weapons that, in the short term, are relevant to a possible conflict over Taiwan but also to China's long-term military presence in Asia. Part of a larger RAND Project AIR FORCE study on Chinese military modernization, this study examines the current and future capabilities of China's defense industry. The goals of this study are to 1.

Handbook of Defence Electronics and Optronics Anil K. Maini, Former Director, Laser Science and Technology Centre, India First complete reference on defence electronics and optronics Fundamentals, Technologies and Systems This book

provides a complete account of defence electronics and optronics. The content is broadly divided into three categories: topics specific to defence electronics; topics relevant to defence optronics; and topics that have both electronics and optronics counterparts. The book covers each of the topics in their entirety from fundamentals to advanced concepts, military systems in use and related technologies, thereby leading the reader logically from the operational basics of military systems to involved technologies and battlefield deployment and applications. Key features:

- Covers fundamentals, operational aspects, involved technologies and application potential of a large cross-section of military systems. Discusses emerging technology trends and development and deployment status of next generation military systems wherever applicable in each category of military systems.
- Amply illustrated with approximately 1000 diagrams and photographs and around 30 tables.
- Includes salient features, technologies and deployment aspects of hundreds of military systems, including: military radios; ground and surveillance radars; laser range finder and target designators; night visions devices; EW and EO jammers; laser guided munitions; and military communications equipment and satellites.

Handbook of Defence Electronics and Optronics is an essential guide for graduate students, R&D scientists, engineers engaged in manufacturing defence equipment and professionals handling the operation and maintenance of these systems in the Armed Forces.

The Center for the Study of Chinese Military Affairs (CSCMA) in the Institute for National Strategic Studies at the National Defense University commissioned this book to fill this gap in the open-source literature on the People's Liberation Army (PLA). The book helps fulfill the CSCMA's congressionally-mandated mission "to study and inform policymakers in the Department of Defense, Congress, and throughout the Government regarding the national goals and strategic posture of the People's Republic of China and the ability of that nation to develop, field, and deploy an effective military instrument in support of its national strategic goals." The authors combine extensive individual expertise in cruise missiles, arms control, and nonproliferation, Asian security, the Chinese military, and the Chinese defense industry. Dennis Gormley, a Senior Lecturer at the University of Pittsburgh's Graduate School of Public and International Affairs, is an internationally recognized expert on cruise missiles.

Jane's Defence Weekly

The Gun Digest Book of Exploded Gun Drawings

All organizations, whether for profit, not for profit, or government, face issues of information technology management. While the concerns involved may differ from organization to organization, the principles of good information technology management remain the same. Using a compilation of articles on various topics relating to technology management, Handbook of Technology Management in Public Administration addresses the management, implementation, and integration of technology across a wide variety of disciplines. The book highlights lessons learned to assist you in solving contemporary problems and avoiding pitfalls. It discusses the creation of innovative paradigms, new boundaries, diversity frameworks, and operational breakthroughs emanating from technology. It also raises questions about the productivity, violence, and intrusions of technology into the personal, organizational, and social environments as we move forward. This book identifies the potential ethical, legal, and social implications of technology from electronic signatures to genetic screenings to privacy interventions to industrial applications. It raises issues, problems, and concerns arising from technology and its effects on nurturing or nullifying the foundations of life and liberty in a constitutional democracy. With the development of new tools and techniques, technology promises to make organizations more productive and efficient. Handbook of Technology Management in Public Administration identifies effective technology management approaches while balancing the repercussions of technological growth.

From the seven basic drills of agent contact to satellite surveillance, The Spycraft Manual is a perfect reference to the whole world of espionage.

Chasing the Dragon

Examines foreign direct investment (FDI) in the United States, the national security concerns associated with this investment, and treatment of these concerns under US policy. This book asks whether the Committee on Foreign Investments in the United States (CFIUS) process can be improved and answers in the affirmative. Does foreign ownership of American businesses pose a threat to the United States (like the abortive attempt by CNOOC, a Chinese company, to purchase Unocal during the summer of 2005)? This important new book examines foreign direct investment (FDI) in the United States, the national security concerns associated with this investment, and treatment of these concerns under US policy.

It asks whether the Committee on Foreign Investments in the United States (CFIUS) process can be improved and answers in the affirmative. The book starts by looking at the review process for foreign takeovers of US firms (including a historical review), looks at the economic and political impact on the United States of foreign direct investment, takes a detailed look at issues relating to FDI posed by the rise of China as an economic and geopolitical power and finally suggests some changes to the Exon-Florio process.

The U.S. Navy SEALs have long been considered among the finest, most courageous, and professional soldiers in American military history—an elite fighting force trained as parachutists, frogmen, demolition experts, and guerrilla warriors ready for sea, air, and land combat. Born out of a proud naval tradition dating back to World War II, the first SEAL teams were commissioned in the early 1960s. Vietnam was their proving ground. In this remarkable volume, fifteen former SEALs—most of them original founding team members, or "plankowners"—share their vivid first-person remembrances of action in Vietnam. Here are honest, brutal, and relentlessly thrilling stories of covert missions, ferocious firefights, and red-hot chopper insertions and extractions, revealing astonishing little-known truths that will only add strength to the enduring SEAL legend.
