Most people have prayed for something or someone in earnest, seeking God's will, only to be left confused by God's response. Sometimes we ask, "Why would a good God allow bad things to happen to good people?" In Amazed and

Confused, Heather Zempel tackles this question head-on by exploring the book of Habakkuk. When the prophet Habakkuk prayed that God would bring change to the backsliding nation of Israel, this issue came to the forefront. Habakkuk begged God for revival and that He would turn the hearts of faithless people back to Him. God's answer to Habakkuk was, "Take a look at the nations and watch what happens! You will be shocked and amazed" (1:5, The Voice). The vision God gave Habakkuk was one of warfare and exile. How do you respond when God answers your prayers in a way that seems out of line with his character and promises? Amazed and Confused proceeds systematically through the book of Habakkuk, exploring the prophet's prayer, God's response, and the prophet's journey from confusion to worship. This interactive Bible study is the perfect choice for those who are hurting and confused about God's responses to their prayers. Features include: Helpful guidance on a question without an easy answer Practical tools for studying the Minor Prophets Easy-to-understand, accessible language

Includes introductory sections to each period giving background information about the Bible as a source text in English literature, and placing writers in their historical context. Draws on examples from medieval, early-modern, eighteenth-century and Romantic, Victorian, and Modernist literature. Includes many 'secular' or 'anti-clerical' writers alongside their 'Christian' contemporaries, revealing how the Bible's text shifts and changes in the writing of each author who reads and studies it.

Since the Thai military seized power in May 2014, Thailand's relations with the United States have significantly deteriorated, while the Peoples Republic of China (PRC) has quickly emerged as the Kingdom's closest Great Power partner. U.S.-Thai defence cooperation has been the main casualty of the coup, and represents a setback for the Obama administration's pivot or rebalance towards Asia, the success of which depends in large part on strengthening bilateral alliances and increasing America's presence in Asia. Even before the coup, the U.S.-Thai alliance was facing difficulties. Since Washington announced the pivot in 2011, neither civilian nor military leaders in Thailand have evinced genuine support for the strategy. Many Thais consider the pivot to be aimed at containing China, and that Thailand's association with the strategy would be detrimental to the country's positive relations with the PRC. Thailand does not perceive the PRC as a source of strategic instability; to the contrary, Thais overwhelmingly view China as a valuable economic and security partner. In contrast to U.S.-Thai relations, Sino-Thai relations have blossomed since the putsch. Beijing's hands off approach to Thailand's domestic political situation is much appreciated by the junta, and has allowed the two sides to focus on strengthening economic ties and defence cooperation. The United States has repeatedly called on the junta to hold new elections, and emphasized that relations cannot return to normal until civilian rule is restored. However, a return to democracy in Thailand is not in prospect any time soon. The rejection of the draft constitution in September 2015 means that the armed forces will retain political power until at least 2017 and conceivably beyond. As a result, U.S.-Thai relations will continue to experience strain while Sino-Thai cooperation strengthens.

The Elemental Mysteries

This earthly plane offers much for us to learn: happiness, wisdom, loss, heartbreak, and enlightenment. It is a Pandora's box of emotions, situations, opportunities, and failures, all wrapped into a package we call life. Nobody is immune, but everyone has the opportunity to grow tall or wither like a flower in harsh light. It's completely up to us how we choose to respond. Finding Hope in the Darkness of Grief is a gleaning of insights from artist Diamante Lavender. For her, life has been a long, difficult road, but it has taught many poignant lessons. Her poetry collection is an exploration of the human soul, a traversing of situations that life throws at us. Diamante has always been intrigued by the ability to overcome and move on to bigger and better things. She writes to encourage hope and possibility in those who read her stories. If she can help others heal, as she has, then Diamante's work as an author and artist will have been well spent. She believes that everyone should try to leave a positive mark on the world, to make it a better place for all. Writing is the way that she is attempting to leave her mark one story at a time.

In this paper, we review 300 references on video retrieval, indicating when text-only solutions are unsatisfactory and showing the promising alternatives which are in majority concept-based. Therefore, central to our discussion is the notion of a semantic concept: an objective linguistic description of an observable entity. Specifically, we present our view on how its automated detection, selection under uncertainty, and interactive usage might solve the major scientific problem for video retrieval: the semantic gap. To bridge the gap, we lay down the anatomy of a concept-based video search engine. We present a component-wise decomposition of such an interdisciplinary multimedia system, covering influences from information retrieval, computer vision, machine learning, and human-computer interaction. For each of the components we review state-of-the-art solutions in the literature, each having different characteristics and merits. Because of these differences, we cannot understand the progress in video retrieval without serious evaluation efforts such as carried out in the NIST TRECVID benchmark. We discuss its data, tasks, results, and the many derived community initiatives in creating annotations and baselines for repeatable experiments. We conclude with our perspective on future challenges and opportunities.

Space applications, nuclear physics, military operations, medical imaging, and especially electronics (modern silicon processing) are obvious fields in which radiation damage can have serious consequences, i.e., degradation of MOS devices and circuits. Zeroing in on vital aspects of this broad and complex topic, Radiation Effects in Semiconductors addresses the ever-growing need for a clear understanding of radiation effects on semiconductor devices and circuits to combat potential damage it can cause. Features a chapter authored by renowned radiation authority Lawrence T. Clark on Radiation Hardened by Design SRAM Strategies for TID and SEE Mitigation This book analyzes the radiation problem, focusing on the most important aspects required for comprehending the degrading effects observed in semiconductor devices, circuits, and systems when they are irradiated. It explores how radiation interacts with solid materials, providing a detailed analysis of three ways this occurs: Photoelectric effect, Compton effect, and creation of electron-positron pairs. The author explains that the probability of these three effects occurring depends on the energy of the incident photon and the atomic number of the target. The book also discusses the effects that photons can have on matter—in terms of ionization effects and nuclear displacement Written for post-graduate researchers, semiconductor engineers, and nuclear and space engineers with some electronics background, this carefully constructed reference explains how ionizing radiation is creating damage in semiconducting devices and circuits and systems—and how that damage can be avoided in areas such as military/space missions, nuclear applications, plasma damage, and X-ray-based techniques. It features top-notch international experts in industry and academia who address emerging detector technologies, circuit design techniques, new materials, and innovative system approaches.

The Prostitutes' Ball

Ruminating animals have various physiological features that enable them to survive in nature. One feature of ruminants is their continuously growing teeth. During grazing, the silica content in forage causes abrasion of the teeth. This abrasion is compensated for by continuous tooth growth throughout the ruminant's life, as opposed to humans or other non-ruminants, whose teeth stop growing after a particular age. Most ruminants do not have upper incisors; instead, they have a thick dental pad to thoroughly chew plant-based food. Ruminants are mammals that digest plant based food by processing it in a series of chambers in their stomachs. There are about 150 species of ruminants, including both domestic and wild species. Ruminating mammals include cattle, goats, sheep, giraffes, bison, moose, elk, yaks, water buffalo, deer, camels, alpacas, llamas, and antelope. Ruminants are distinguished from other animals by having a four-compartment stomach. The four compartments are called the rumen, the reticulum, the omasum, and the abomasum. The rumen and the reticulum are connected and work in concert and are therefore sometimes called the "reticulorumen". Ruminant Physiology: Digestion, Metabolism is a valuable tool of information for researchers, nutritionists, advisors, and advanced graduate students who want to have up-to-date and concise information on ruminant digestive system.
