## **Porsche Water-Cooled Turbos 1979-2019**

Le Mans in 2011 marks the 60th anniversary of Porsche's participation in the Le Mans 24 Hours. This anniversary is an ideal opportunity to provide a detailed study, packed with photos, narrative and data, of Porsche's part in the world's greatest motor race. Porsche's first visit to Le Mans was with a singleton entry of a streamlined 356 model, complete with aerodynamic fairings over the wheels. True to the reputation Porsche has established over its long association with the famous endurance race, this 356 ran like clockwork to 20th place, beating the coveted record for the shortest time spent in the pits. Since then, there have been Porsches entered for every single running of the 24 hours and the models that have taken part add up to a roll call of great sports racing cars: 550 Spyder, 718 RSK, 904, 906, 908, 910, 917, 936, 935, 956, 962 and GT1. And to this list can be added the ubiquitous 911, the privateer's choice for the race: in 1971, a year that saw a record number of Porsches take part, 19 of the 33 Porsches in the race were 911s. This book, compiled by a meticulous author with a passion for Porsche, provides definitive coverage of the subject, supported by full access to Porsche's archives of photographs, data and technical information.

Where appropriate, the handbook delivers very helpful 911 - specific repair instructions and notes. Even if you're an old hand at replacing drive belts on other cars, when replacing the alternator and cooling fan belts on a 911 you have to "adjust V-belt tension by moving adjustment shims to inside or outside of pulley halves." When replacing the clutch, you'll need to know that the "cross-shaft needle bearings are not identical [so check] proper location before installing." Not sure where the antenna amplifier is mounted? According to a chart in the Electrical section, it's in the luggage compartment near the right hood hinge.

Rantoul and the former Chanute Air Force Base are inseparably intertwined as primary players in a single historical narrative. Rantoul was first founded as an agriculturally based community in 1848 near an area known as Mink Grove. The settlement boomed with the coming of the Illinois Central Railroad in 1854; a railroad championed by the town's namesake, Robert Rantoul Jr. Disaster followed in 1899 and again in 1901 with devastating fires. Then, in 1917, a U.S. Army flying field was built on the outskirts of Rantoul. Named after the aviation pioneer Octave Chanute, Chanute Field, later Chanute Air Force Base, became a premier technical training facility. A mutually beneficial relationship quickly developed between these civilian and military establishments that would last for over 75 years. Chanute Air Force Base closed in 1993, ushering in yet another new era for the village of Rantoul.

The automotive industry is still one of the world's largest manufacturing sectors, but it suffers from being very technology-focused as well as being relatively short-term focused. There is little emphasis within the industry and its consultancy and analyst supply network on the broader social and economic impacts of automobility and of the sector that

provides it. The Global Automotive Industry addresses this need and is a first port of call for any academic, official or consultant wanting an overview of the state of the industry. An international team of specialist researchers, both from academia and business, review and analyse the key issues that make vehicle manufacturing still the world's premier manufacturing sector, closely tied in with the fortunes of both established and newly emerging economies. In doing so, it covers issues related to manufacturing, both established practices as well as new developments; issues relating to distribution, marketing and retail, vehicle technologies and regulatory trends; and, crucially, labour practices and the people who build cars. In all this it explains both how the current situation arose and also likely future trajectories both in terms of social and regulatory trends, as the technological, marketing and labour practice responses to those, leading in many cases to the development of new business models. Key features

- Provides a global overview of the automotive industry, covering its current state and considering future challenges
- Contains contributions from international specialists in the automotive sector
- Presents current research and sets this in an historical and broader industry context
- Covers threats to the industry, including globalization, economic and environmental sustainability

The Global Automotive Industry is a must-have reference for researchers and practitioners in the automotive industry and is an excellent source of information for business schools, governments, and graduate and undergraduate students in automotive engineering.
