International auditing of publicly owned corporations is governed largely by either U.S. Public Company Accounting Oversight Board (PCAOB) auditing standards or International Standards on Auditing (ISA) established by the International Federation of Accountants (IFAC). In some respects, the U.S. PCAOB and ISA are similar, but in other ways they are not. In *International Auditing Standards in the United States*, the authors describe key differences between PCAOB auditing standards and ISA. The goal in doing so is to provide students, managers, and researchers with a clear, concise guide to the major differences between PCAOB and ISA standards. Understanding these differences will provide the reader with a greater appreciation of the differences in the auditing process between nations, and a greater understanding of what the audit opinion means as issued in different parts of the world. Asokan Anandarajan, professor of accounting and accounting information systems at the School of Management, New Jersey Institute of Technology, Newark, NJ. He has an MBA and MPhil from Cranfield University, UK and a PhD in accounting from Drexel University, Philadelphia. His research interests relate to earnings management and expectation gap auditing standards. He has published in many peer reviewed research journals including: *Accounting Horizons*, *Auditing: A Journal of Practice and Theory*, *Accounting and Finance*, and *Advances in Accounting*.

The emergence of new evaluation paradigms raises serious questions about how merit can be established and judged. Linking Auditing and Metaevaluation addresses this concern, introducing a strategy by which the quality of inquiry procedures and products can be assured and retrospectively assessed. Based upon the model of fiscal auditing, the technique is applicable to a variety of social scientific investigations and specifically includes non-conventional paradigms such as naturalistic evaluation. and procedures. The text reflects the challenges inherent in accounting and auditing practice, particularly in public accounting firms. The text is designed to provide flexibility for instructors; the thirteen chapters focus on the Auditing Process while the eight modules provide additional topics. There are three main approaches to teaching auditing, which you need to understand to match customer needs with our texts: 1. The Balance Sheet Approach—smallest market segment and more traditional, which teaches the audit procedures by using the individual balance sheet (and related income statement) accounts. Our Whittington/ Pany text is the only one left in this segment. 2. The Audit Risk Model. This is an emerging area in auditing that considers audit risk, which is the probability that an auditor will give an inappropriate opinion on financial statements. 3. The Cycles Approach, which was first introduced by the market-leading textbook written by Arens/Loebbecke (Prentice Hall). Cycles are sets of accounts and business activities that go together in an accounting system. This is where Robertson fits in the market.

"How can you argue with the core principles of Lean, that you focus on what provides value to your customer and eliminate work that is not necessary (muda)? Internal auditors need to understand not only who their primary customers are, but what is valuable to them - which in most cases is assurance that the risks that matter to the achievement of objectives are properly managed. We need to communicate what they need to know and not what we want to say. This incessant focus on the customer and the efficient production of a valued product should extend to every

internal audit team. How else can we ensure that we optimize the use of our limited resources to address the dynamic business and risk environment within which our organizations operate?" Norman Marks, GRC Thought Leader Using lean techniques to enhance value add and reduce waste in internal auditing Lean Auditing is a practical guide to maximising value and efficiency in internal audit through the application of lean techniques. It is an ideal book for anyone interested in understanding what progressive, value adding audit can be like. It is also ideal for anyone wondering whether audit activities can be streamlined or better co-ordinated with other activities. The book contains practical advice from the author's experience as CAE of AstraZeneca PLC; from his work as a consultant specializing in this field; as well as insights from leading CAEs in the UK, US and elsewhere. In addition, there are important insights from thought leaders such as Richard Chambers (IIA US) and Norman Marks (GRC thought leader) and Chris Baker (Technical Manager of the IIA UK). Increasing pressure on resources is driving a need for greater efficiency in all areas of business, and Internal Audit is no exception. Lean techniques can help streamline the workflow, but having only recently been applied to IA, lack the guidance available for other techniques. Lean Auditing fills this need by combining expert instruction and actionable advice that helps Internal Auditors: Benchmark their efficiency against lean ways of working Understand warning signs of waste and lower added value Understanding practical ways of working that improve added value and reduce waste Gain confidence about progressive ways of

working in internal audit Understand how improved ways of working in audit can positively impact the culture of the wider organization One of the keys to the lean audit is finding out exactly what the stakeholder wants, and eliminating everything else. Scaling back certain operations can delineate audit from advisory, and in the process, dramatically improve crucial outcomes. To this end, Lean Auditing is the key to IA efficiency.
