Fungi Bio-prospects in Sustainable Agriculture, Environment and Nanotechnology, Volume Two: Extremophilic Fungi and Myco-mediated Environmental Management explores varied aspects of fungal biology and their relevance in microbiology and agriculture, thus allowing for better insights on basic and advanced biotechnological application in human welfare and sustainable agriculture. Chapters throw light on different sectors of fungi, including fungi in extreme circumstances, bioremediation, complex and toxic effluents, and mycoremediation. The book was designed to explore the possibility of huge fungal diversity for present and future generation in different sectors of human life. Volume Two focuses on extremophilic fungi and myco-mediated environmental management. Summarizes various aspects of fungi in the field of microbiology, sustainable agriculture, nano-technology and environment Describes the molecular approaches and gene expression of fungi Provides a deeper understanding of fungi that could be articulated in various fields

## **Prospects for Sustainable Energy**

Energy security, economic prosperity and environmental protection are challenges  
for all countries. They are particularly pressing in the transportation sector which

still relies almost exclusively on oil. The use of hydrogen as an energy carrier and fuel cells as motive devices in transportation and energy distribution systems are possible solutions. This book provides an analysis of policy responses and hurdles and business opportunities. Information regarding the latest R&D, policy initiatives and private sector plans are assessed from the perspective of the rapidly changing global energy system in the next half century.

What is the legacy of Hungarian reform communism? Which are the positive and negative elements of the transition process? What objective and subjective factors have been responsible for the immense setback in the country's economic performance during the early years of the transition? What are the prospects for socio-economic development in the coming decade? Relying on their former research and on several background studies, the two authors of this book give an answer to each of these questions. They analyse the most important dimensions of social existence, namely economy, politics, income differentiation, health care, education, science and technology, and also the regional aspects. Based on an abundance of facts, the analyses of the past events and their possible implications for the future contribute to a better understanding of the very complex socio-economic processes going on in Hungary today.

Explores the short-, medium-, and long-term outlook for the global economy and the implications for developing countries and poverty reduction. This edition examines how the international community, in managing the process of integration, will shape the world of 2030.

### **Japan, the United States, and Prospects for the Asia-Pacific Century**

The 13th edition of this annual publication focuses on the global and national dimensions of the investment climate for developing countries, that is the policy and institutional environment that fosters entrepreneurship and productive investment. Issues discussed include: the effects of current developments in the world economy; ways that the international community can help foster economic growth and reduce poverty levels; the need for sound national policies, particularly to encourage competition, in order for developing countries to reap the benefits of globalisation; and the potential for a new World Trade Organization agreement on investment and competition.

This report was produced under the Technical Assistance Grant: Determining the Potential for Carbon Capture and Storage (CCS) in Southeast Asia (TA 7575-REG), and is focused on an assessment of the CCS potential in Thailand, Viet Nam, and specific regions of Indonesia (South Sumatra) and the Philippines (Calabarzon). It contains inventories of carbon dioxide emission sources, estimates of overall storage potential, likely source-sink match options for potential CCS projects, and an analysis of existing policy, legal, and regulatory frameworks with a view toward supporting future CCS operations. The report also presents a comparative financial analysis of candidate CCS projects, highlights possible incentive schemes for financing CCS, and provides an actionable road map for pilot, demonstration, and commercial CCS projects.

The contributors to this book explore the current situation of North Korea in various aspects and provide policy suggestions for North Korea to become part of the international community and achieve sustainable development. Focusing on three key areas of economic development, namely, international sectors, agriculture and urban development, and energy and environment, this book lays out recommendations and prospects for North Korea. Authors assess the current situation of North Korea, explore preconditions for becoming a member of the international community, and suggest policies necessary for the sustainable

development of North Korea. They cover a wide range of areas including reforestation, WTO accession, and the potential for economic integration with South Korea. These evaluations draw on both what is understood about the current situation in North Korea and comparisons with other countries and territories. This book will be a valuable resource for scholars and policy planners who focus on North Korea.

A component in the America's Energy Future study, Electricity from Renewable Resources examines the technical potential for electric power generation with alternative sources such as wind, solar-photovoltaic, geothermal, solar-thermal, hydroelectric, and other renewable sources. The book focuses on those renewable sources that show the most promise for initial commercial deployment within 10 years and will lead to a substantial impact on the U.S. energy system. A quantitative characterization of technologies, this book lays out expectations of costs, performance, and impacts, as well as barriers and research and development needs. In addition to a principal focus on renewable energy

technologies for power generation, the book addresses the challenges of incorporating such technologies into the power grid, as well as potential improvements in the national electricity grid that could enable better and more extensive utilization of wind, solar-thermal, solar photovoltaics, and other renewable technologies.

### **Global Economic Prospects**

The year 2000's most significant international event was, almost certainly, neither political nor military, but scientific - the announcement, in June, that the human genome had been almost totally decoded. Future generations may well see this as a major turning point, opening the way to radical changes in diagnosis, prognosis, and medical treatment. Often compared with the space programme, this vast enterprise still generates misgivings: this new power, which human beings now have, to modify the genetic heritage of living creatures raises fundamentally new

ethical questions - and society as a whole will have to find the answers. In fact, the accelerating pace of scientific and technical progress seems to be reviving atavistic anxieties, some rational, others less so. Recent public-health crises, including the mad cow disease' scare, which lasted into 2000, have fuelled these fears. The public's rejection of GMOs (Genetically Modified Organisms) - verging on a crusade in some countries - tells its own story. As regards conflict, 2000 saw the Middle East peace process grind to a halt, and the Intifada resume. In Europe, the situation in Kosovo and Chechnya, both the scenes of fighting in 1999, stayed precarious. Peace and democracy did score some successes, however, particularly in Europe: the centre-left's victory in Croatia, sweeping former President Tudjman's party off the scene, the democratic party's triumph in Bosnia, and the fall of the Milosevic regime in Serbia.

### **Long-term Prospects for Developments in Space: A Scenario Approach**

The CSIS Space Initiatives project promotes global space exploration as we move into the twenty-first century. The next decade, ushered in by the new U.S. president and his administration, will be crucial to space exploration. Indeed, during the next decade, the Space Shuttle will have to be retired, the International Space Station (ISS) made a visible success, and humans returned to the moon. In

fact, the Government Accountability Office (GAO) recently identified retirement of the Space Shuttle as one of the 13 most urgent issues that the new administration will need to address. Accordingly, CSIS put together a select working group to provide objective, bipartisan, and pragmatic insights into this complex set of issues. The first working group meeting took place on November 14, 2008, and brought together representatives from the U.S. government, industry, international partners, and policy associations to define the foreseeable gaps and explore the consequences of these gaps for the future of human spaceflight. A second working group meeting, on December 8, 2008, evaluated scenarios for mitigating the gaps, keeping in mind budgetary, political, foreign policy, and technical objectives and constraints. This report reviews the issues involved and makes recommendations for the middle and long term.

The "European Yearbook" promotes the scientific study of nineteen European supranational organisations and the Organisation for Economic Co-operation and Development (OECD). Each volume contains a detailed survey of the history, structure and yearly activities of each organisation and an up-to-date chart providing a clear overview of the member states of each organisation. Each volume contains a comprehensive bibliography covering the year's relevant publications. This is an indispensable work of reference for anyone dealing with the European institutions.
