Which Rights Should be Universal?

This textbook guides the reader towards various aspects of growth and international trade in a Diamond-type overlapping generations framework. Using the same model type throughout the book, timely topics such as growth with bubbles, debt reduction in rich countries and policies to mitigate climate change are explored. The first part starts from the "old" growth theory and bridges to the "new" growth theory (including R&D and human capital approaches). The second part presents an intertemporal equilibrium theory of inter and intra-sectoral trade and concludes by analyzing the debt mechanics inducing the huge imbalances among eurozone countries. The book is primarily addressed to graduate students wishing to proceed to the analytically more demanding journal literature.

Raising Dad

A second compilation of Jeff Howe's unique poetry, *Falling from a Cloud* is a complete work, particularly in that Jeff not only wrote the content for it, but he designed the entire book from cover to cover as well. When you pick up the book to read it, you will hold in your hands an easy-to-navigate and orderly presentation that is Jeff's signature statement to lay out methodologies. His poetry tells stories, sings songs, speaks about people and places that are universal in spirit, if not in actuality. Take the journey - you won't be disappointed!

Courting Trouble

Mrs. Gene Stratton-Porter's novel is an illustration of the harmony and intimacy which does rightly exist between a man and a forest. In 'The Harvester' she has not only dramatized, but proved the purifying and preservative forces that are

always present and predominant in such a situation. This is why the story is so popular. It is utterly simple, nothing in the plot to appeal to morbid interest or curiosity. We really prefer what is good and clean in man and in nature if we can get it portrayed in fiction.

Preserving New York is the largely unknown inspiring story of the origins of New York City's nationally acclaimed landmarks law. The decades of struggle behind the law, its intellectual origins, the men and women who fought for it, the forces that shaped it, and the buildings lost and saved on the way to its ultimate passage, span from 1913 to 1965. Intended for the interested public as well as students of New York City history, architecture, and preservation itself, over 100 illustrations help reveal a history richer and more complex than the accepted myth that the landmarks law sprang from the wreckage of the great Pennsylvania Station. Images include those by noted historic photographers as well as those from newspaper accounts of the time. Forgotten civic leaders such as Albert S. Bard and lost buildings including the Brokaw Mansions, are unveiled in an extensively researched narrative bringing this essential episode in New York's history to future generations tasked with protecting the city's landmarks. For the first time, the story of how New York won the right to protect its treasured buildings, neighborhoods and special places is brought together to enjoy, inform, and inspire all who love New York.

A trace element (TE) is a chemical element presented below ~ 0.1 wt. % and required in minute quantities to maintain proper physical functioning. TE analysis in clinical samples (plasma, urine, cerebro-spinal fluid, full-term placenta, hair, nails, buccal mucosa, semen, biopsy specimens) has received increasing attention. Based on 62 sources, current effort presents comparative knowledge about the attempts to accurately trace TE in clinical samples through Vis/NIR, PIXE, TXRF, GFAAS, ICP-MS. It informs the need for further research adjustments to reveal the reciprocal states of certain TE (Cu/Zn, Ca/Mg, Fe/ Pb) in correlation with their real-time counts in both maternal and neonatal umbilical cord plasma, and in relation to augmented oxidative stress. This would help to achieve consistency in interpreting obstetrical complications (preeclampsia, prematurity, or gestational diabetes). Generated hypotheses should target plausible mechanisms behind TE alterations and their stage-sensitive measures in gynecological cancer. New prospects are discussed in management and prognosis of endometriosis and premature ovarian

failure (POF).

Introduction to Material and Energy Balances

This book proposes a revisionist approach to democratic politics. Yaron Ezrahi focuses on the creative unconscious collective imagination that generates ever-changing visions of legitimate power and authority, which compete for enactment and institutionalization in the political arena. If, in the past, political authority was grounded in fictions such as the divine right of kings, the laws of nature, historical determinism and scientism, today the space of democratic politics is filled with multiple alternative social imaginaries of the desirable political order. Exposure to electronic mass media has made contemporary democratic publics more aware that credible popular fictions have greater impact on shaping our political realities than do rational social choices or moral arguments. The pressing political question in contemporary democracy is, therefore, how to select and enact political fictions that promote peace and how to found the political order on checks and balances between alternative political imaginaries of freedom and justice.

This book has been developed from its earlier and far less formal presentment as the proceedings of a symposium entitled The Biochemistry of S-Adenosylmethionine as a Basis for Drug Design that was held at the Solstrand Fjord Hotel in Bergen, Norway on June 30-July 4, 1985. The purpose of the symposium was to bring together scientists from various disciplines (biochemistry, pharmacology, virology, immunology, chemistry, medicine, and so on) to discuss the recent advances that have been made in our understanding of the biological roles of S adenosylmethionine (AdoMet) and to discuss the feasibility of utilizing AdoMet-dependent enzymes as targets for drug design. Thus the information provided herein will be of value not only to basic scientists involved in elucidating the role of AdoMet in biology, but also to medicinal chemists who are using this basic knowledge in the process of drug design. The volume should also be of interest to pharmacologists and clinicians involved in biological evaluation of potential therapeutic agents arising from the efforts of the biochemists and medicinal chemists. Each plenary speaker at the symposium was requested to submit a chapter reviewing recent contributions of their discipline to our base of knowledge about the biological role of AdoMet. Topics covered in this volume include protein and phospholipid methylations (Section A), nucleic acid methylations (Section B), the regulation of AdoMet, S-adenosylhomocysteine, and methylthioadenosine metabolism (Section C), clinical aspects of AdoMet (Section D), and the design, synthesis, and biological evaluation of trans methylation inhibitors (Section E).

Anatomy of a Home Studio

It was a contest of titans: John Adams and Thomas Jefferson, two heroes of the Revolutionary era, once intimate friends, now icy antagonists locked in a fierce battle for the future of the United States. The election of 1800 was a thunderous clash of a campaign that climaxed in a deadlock in the Electoral College and led to a crisis in which the young republic teetered on the edge of collapse. Adams vs. Jefferson is the gripping account of a turning point in American history, a dramatic struggle between two parties with profoundly different visions of how the nation should be governed. The Federalists, led by Adams, were conservatives who favored a strong central government. The Republicans, led by Jefferson, were more egalitarian and believed that the Federalists had betrayed the Revolution of 1776 and were backsliding toward monarchy. The campaign itself was a barroom brawl every bit as ruthless as any modern contest, with mud-slinging, scare tactics, and

backstabbing. The low point came when Alexander Hamilton printed a devastating attack on Adams, the head of his own party, in "fifty-four pages of unremitting vilification." The stalemate in the Electoral College dragged on through dozens of ballots. Tensions ran so high that the Republicans threatened civil war if the Federalists denied Jefferson the presidency. Finally a secret deal that changed a single vote gave Jefferson the White House. A devastated Adams left Washington before dawn on Inauguration Day, too embittered even to shake his rival's hand. With magisterial command, Ferling brings to life both the outsize personalities and the hotly contested political questions at stake. He shows not just why this moment was a milestone in U.S. history, but how strongly the issues--and the passions--of 1800 resonate with our own time.

Since well before his epic 1974 walk between the Twin Towers of the World Trade Center, Philippe Petit had become an artist who answered first and foremost to the demands of his craft - not only on the high wire, but also as a magician, street juggler, visual artist, builder and writer. A born rebel, he is self taught, cultivating the attitudes, resources and techniques to tackle even seemingly impossible feats. His outlaw sensibility spawned a unique approach to the creative process, an approach he shares with the reader, revealing unconventional ways of creating art.
