An updated edition of the classic reference on the dynamics of road and off-road vehicles As we enter a new millennium, the vehicle industry faces greater challenges than ever before as it strives to meet the increasing demand for safer, environmentally friendlier, more energy efficient, and lower emissions products. Theory of Ground Vehicles, Third Edition gives aspiring and practicing engineers a fundamental understanding of the critical factors affecting the performance, handling, and ride essential to the development and design of ground vehicles that meet these requirements. As in previous editions, this book focuses on applying engineering principles to the analysis of vehicle behavior. A large number of practical examples and problems are included throughout to help readers bridge the gap between theory and practice. Covering a wide range of topics concerning the dynamics of road and off-road vehicles, this Third Edition is filled with up-to-date information, including: * The Magic Formula for characterizing pneumatic tire behavior from test data for vehicle handling simulations * Computer-aided methods for performance and design evaluation of off-road vehicles, based on the author's own research * Updated data on road vehicle transmissions and operating fuel economy * Fundamentals of road vehicle stability control * Optimization of the performance of four-wheel-drive off-road vehicles and experimental substantiation, based on the author's own investigations * A new theory on skid-steering of tracked vehicles, developed by the author.

The Caterpillar's Roots provides the story of the tractors developed between 1889 and 1925 by Daniel Best, C.L. (Leo) Best and Benjamin Holt and their associated companies. This book provides a more complete history of the companies that in 1925 were consolidated to form the world famous Caterpillar Tractor Co.

Since producing its first harvester in 1885 under the Best brand name, Caterpillar has been a leader not only in the construction and earthmoving industries, but in agriculture as well. While providing limited coverage of Caterpillar construction and mining machinery, this new photohistory provides a concise overview that focuses on the maker's agricultural line, including early steam and diesel tractors and significant postwar machinery. Rare archival photos supplement a generous selection of modern color images showing restored crawlers.

Praise for the previous edition: “Contains something for everyone involved in lubricant technology” — Chemistry & Industry
This completely revised third edition incorporates the latest data available and reflects the knowledge of one of the largest companies active in the business. The authors take into account the interdisciplinary character of the field, considering aspects of engineering, materials science, chemistry, health and safety. The result is a volume providing chemists and engineers with a clear interdisciplinary introduction and guide to all major lubricant applications, focusing not only on the various products but also on specific application engineering criteria. A classic reference work, completely revised and updated (approximately 35% new material) focusing on sustainability and the latest developments, technologies and processes of this multi billion dollar business Provides chemists and engineers with a clear interdisciplinary introduction and guide to all major lubricant applications, looking not only at the various products but also at specific application engineering criteria All chapters are updated in terms of environmental and operational safety. New guidelines, such as REACH, recycling alternatives and biodegradable base oils are introduced Discusses the integration of micro- and nano-tribology and lubrication systems Reflects the knowledge of Fuchs Petrolub SE, one of the largest companies active in the lubrication business 2 Volumes wileyonlinelibrary.com/ref/lubricants

Ford is to automobile what Best is to tractors. Making Tracks: C.L. Best and the Caterpillar Tractor Co. is a complete picture of Clarence Leo Best and why he was driven to live up to his name—Best. Read about the little-known history of the name behind the success of the historical California company, the Caterpillar Tractor Co. Best's life was varied and intriguing; designing and building tractors, raising cattle, fistfights in the boardroom, lawsuits and hostile takeovers, and mining gold were a few of the experiences that punctuate the chapters of this brilliant life. Ultimately, Best's improvements to the track-type tractor concept allowed the Caterpillar Tractor Co. to become the world's road builder and so much more. This story follows Best through his life, from working for his father through starting and operating his own company to being chairman of the board for the Caterpillar Tractor Co. for twenty six years. To complete the profile of the man as well as the entrepreneur, the authors interviewed Best's only son and were granted access to countless family photos and records.

Pacific Road Builder and Engineering Review

At its peak in World War II, the United States Army contained over 700 engineer battalions, along with numerous independent brigades and regiments. The specialized soldiers of the Engineers were tasked with a wide variety of crucially important tasks including river bridging, camouflage, airfield construction, and water and petroleum supply. However, despite their important support roles, the engineers were often employed on the front lines fighting beside the general infantry in the desperate battles of the European theatre. This book covers the role of these soldiers, from their recruitment and training, through their various support missions and combat experiences, forming an account of what it was truly like to be a combat engineer in World War II.
