Do existing measures of state fragility measure fragility accurately? Based on commonly used fragility measures, South Africa (SA) is classified as a relatively stable state, yet rising violent crime, high unemployment, endemic poverty, eroding public trust, identity group based preferential treatment policies, and the rapid rise of the private security sector are all indications that SA may be suffering from latent state fragility. Based on a comprehensive view of security, this study examines the extent to which measures of political legitimacy and good governance, effectiveness in the security system - especially with respect to the police system - and mounting economic challenges may be undermining the stability of SA in ways undetected by commonly used measures of state fragility. Using a mixed-methods approach based on quantitative secondary data analysis and semi-structured interviews with government officials, security practitioners, and leading experts in the field, this study finds that the combination of colonization, apartheid, liberation struggle, transition from autocracy to democracy, high levels of direct and structural violence, stagnating social, political, and economic developments make South Africa a latently fragile state. Conceptually, the results of this research call into question the validity of commonly used measures

of state fragility and suggest the need for a more comprehensive approach to assessing state fragility. Practically, this study offers a number of concrete policy recommendations for how South Africa may address mounting levels of latent state fragility.

This report is an integration of the seven reports which emerged from the research, and pulls together the findings arising from it. What emerges is that the resignation, death and ageing of the present educator force is likely to have a significant effect on replacement demand for educators over the next four years.

Policing in South Africa has gained notoriety through its extensive history of oppressive law enforcement. In 1994, as the country's apartheid system was replaced with a democratic order, the new government faced the significant challenge of transforming the South African police force into a democratic police agency—the South African Police Service (SAPS)—that would provide unbiased policing to all the country's people. More than two decades since the initiation of the reforms, it appears that the SAPS has rapidly developed a reputation as a police agency beset by challenges to its integrity. This book offers a unique perspective by providing in-depth analyses of police integrity in South Africa. It is a case study that systematically and empirically explores the contours of police integrity in a young democracy. Using the organizational theory of police integrity, the book analyzes the complex set of historical, legal, political, social, and economic circumstances shaping police integrity. A discussion of the theoretical framework is accompanied by the results of a nationwide survey of nearly 900 SAPS officers, probing their familiarity with official rules, their expectations of discipline within the SAPS, and their willingness to report misconduct. The book also examines the influence of the respondents' race, gender, and supervisory status on police integrity. Written in a clear and direct style, this book will

crime, coups, terrorism and economic performance. In spite of this objective, the failed state literature has not focused enough on how institutions operate in the developing world. This book unpacks the state, by examining the administrative, security, judicial and political institutions separately. By doing so, the book offers a more comprehensive and clear picture of how the state functions or does not function in the developing world, merging the failed state and institutionalist literatures. Rather than merely describing states in crisis, this book explains how and why different types of institutions deteriorate. Moreover, the book illustrates the impact that institutional decay has on political instability and poverty using examples not only from Africa but from all around the world.
