Native Americans and Sport in North America

This five volume set is a comprehensive collection of primary sources on sports in the late Victorian and Edwardian eras. At the beginning of the period few sports were regulated, but by the outbreak of the First World War organized sports had become an integral part of British cultural, social and economic life. Specialist Martin Polley has collected articles from a wide range of journals including "Blackwood's Magazine," "Nineteenth Century," "Fortnightly Review" and "Contemporary Review," all of which reveal changing middle-class attitudes to sports. The five volumes cover the varieties of sports being promoted, sports and education, commercial and financial aspects, sports and animals and the globalization of sports through empire.

Sports in North America: Sports organized, 1880-1900

Baily's magazine of sports and pastimes

Contributed articles chiefly with reference to rural development in Northeastern India; includes articles on cultural history of the region.

Sports in North America: The origins of modern sports, 1820-1840

Accessible Field Sports: the experiences of a Sportsman in North America. By "Ubique" [P. G.].

In the past decade, few subjects at the intersection of medicine and sports have generated as much public interest as sports-related concussions - especially among youth. Despite growing awareness of sports-related concussions and campaigns to educate athletes, coaches, physicians, and parents of young athletes about concussion recognition and management, confusion and controversy persist in many areas. Currently, diagnosis is based primarily on the symptoms reported by the individual rather than on objective diagnostic markers, and there is little empirical evidence for the optimal degree and duration of physical rest needed to promote recovery or the best timing and approach for returning to full physical activity. Sports-Related Concussions in Youth: Improving the Science, Changing the Culture reviews the science of sports-related concussions in youth from elementary

school through young adulthood, as well as in military personnel and their dependents. This report recommends actions that can be taken by a range of audiences - including research funding agencies, legislatures, state and school superintendents and athletic directors, military organizations, and equipment manufacturers, as well as youth who participate in sports and their parents - to improve what is known about concussions and to reduce their occurrence. Sports-Related Concussions in Youth finds that while some studies provide useful information, much remains unknown about the extent of concussions in youth; how to diagnose, manage, and prevent concussions; and the short- and long-term consequences of concussions as well as repetitive head impacts that do not result in concussion symptoms. The culture of sports negatively influences athletes' self-reporting of concussion symptoms and their adherence to return-to-play guidance. Athletes, their teammates, and, in some cases, coaches and parents may not fully appreciate the health threats posed by concussions. Similarly, military recruits are immersed in a culture that includes devotion to duty and service before self, and the critical nature of concussions may often go unheeded. According to Sports-Related Concussions in Youth, if the youth sports community can adopt the belief that concussions are serious injuries and emphasize care for players with concussions until they are fully recovered, then the culture in which these athletes perform and compete will become much safer. Improving understanding of the extent, causes, effects, and prevention of sports-related concussions is vitally important for the health and well-being of youth athletes. The findings and recommendations in this report set a direction for research to reach this goal.

Sport and Memory in North America

Baily's Magazine of Sports & Pastimes

North is the point we look for on a map to orient ourselves. It is also the direction taken throughout history by the adventurous, the curious, the solitary, and the foolhardy. Based in the North himself, Peter Davidson, in *The Idea of North*, explores the very concept of "north" through its many manifestations in painting, legend, and literature. Tracing a northbound route from rural England—whose mild climate keeps it from being truly northern—to the wind-shorn highlands of Scotland, then through Scandinavia and into the desolate, icebound Arctic Circle, Davidson takes the reader on a journey from the heart of society to its most far-flung outposts. But we never fully leave civilization behind; rather, it is our companion on his alluring ramble through the north in art and story. Davidson presents a north that is haunted by Moomintrolls and the ghosts of long-lost Arctic

explorers but at the same time, somehow, home to the fragile beauty of a Baltic midsummer evening. He sets the Icelandic Sagas, Nabokov's snowy fictional kingdom of Zembla, and Hans Christian Andersen's cryptic, forbidding Snow Queen alongside the works of such artists as Eric Ravilious, Ian Hamilton Finlay, and Andy Goldsworthy, demonstrating how each illuminates a different facet of humanity's relationship to the earth's most dangerous and austere terrain. Through the lens of Davidson's easy erudition and astonishing range of reference, we come to see that the north is more a goal than a place, receding always before us, just over the horizon, past the last town, off the edge of the map. True north may be unreachable, but The Idea of North brings intrepid readers closer than ever before.

The North Dakota Quarterly

The outlandish stories of the antics of early stock car racers immediately attracted me. Lloyd Seay and Roy Hall hauling liquor from Dawsonville to Atlanta one night and winning races the next day in the same car; Fonty Flock winning the Southern 500 wearing Bermuda shorts and argyle socks; his brother Tim racing with a monkey—named Jocko Flocko—in his racecar." This article appears in the Winter 2012 issue of Southern Cultures. The full issue is also available as an ebook. Southern Cultures is published quarterly (spring, summer, fall, winter) by the University of North Carolina Press. The journal is sponsored by the University of North Carolina at Chapel Hill's Center for the Study of the American South.

Child's Play

Stress in Health and Disease, An Issue of Psychiatric Clinics of North America,

The Badminton Magazine of Sports and Pastimes

Surveys the history of athletic competition from the time of ancient civilizations through the twentieth century.

Newsletter - North American Society for Sport History

The History of Sport in Britain, 1880-1914: Field sports

This issue is a comprehensive, multi-disciplinary state-of-the-art review focusing on the athlete as a whole. The articles explore the impact of excessive activity, new therapies and performance enhancement interventions on the musculoskeletal, neurological and psychological aspects of the athlete.

Journal of Sport and Exercise Psychology

Sport and Adventures Among the North-American Indians

The Journal of Sport and Exercise Psychology (JSEP) exclusively specializes in providing the foremost coverage of sport and exercise psychology research. This highly esteemed journal presents innovative research in all areas of sport and exercise psychology from the leading scholars in the field. Areas of interest in this quarterly journal include research in social, clinical, developmental, and experimental psychology as well as psychobiology and personality. In addition to original research, JSEP provides a digest of articles from recent sport and exercise publications, media reviews, and an annual supplemental issue devoted to proceedings of the annual conference of the North American Society for the Psychology of Sport and Physical Activity. Recent issues of JSEP have presented articles on topics relating to exercise and depression, the effect of anticipated running distance on perceived exertion and attentional focus, athletic identity and its relation to exercise behavior, the effects of exercise on quality of life, and psychophysiological responses of rival sports fans. In upcoming issues, the diversity of the content in JSEP will continue with topics ranging from a study of mood and self-efficacy during acute exercise in clinical depression to competitive sport motivation and involvement in relation to family socialization and gender. Also available is the online format of JSEP that offers the same authoritative content available in the print edition, but with the additional advantages of electronically formatted material including the ability to search journals in seconds, access to five years of back issues, and e-mail notification that the online version is available before the print version mails.

"both the perspective and the scope of this volume are well conceived and executed. This book provides an important platform for developing expertise in a fascinating and growing field. It is required reading from my studentsArchives of Clinical Neuropsychology "The book will provide an excellent reference for health care providers in the area of concussion management and the increased emphasis on the incorporation of neurocognitive testing and the role of neuropsychologists. This is information that needs to out in the Sports Medicine arena as to how to incorporate neuropsychologists in the Sports Medicine team." --Steven L. Cole, ATC Associate Athletic Director, Internal Operations College of William and Mary "Dr. Webbe has used his vast knowledge and experience in the field of sports neuropsychology to create a superb road map, which provides important information and direction for the study of sports concussion. This handbook reflects his skill in attracting some of the world's leaders in sports neuropsychology as chapter authors, and his ability to organize and integrate their unique funds of knowledge." --Jeffrey T. Barth, PhD University of Virginia School of Medicine An estimated 300,000 sport-related concussions occur every year in the United States,

many of which lead to short- or long-term impairment or even sudden death. Frank Webbe, one of the foremost leaders in the field, has compiled the most up-to-date, comprehensive volume on sport neuropsychology currently available. It presents, through the contributions of leading practitioners in the field, an exhaustive study of sport-related concussions and the multitude of management and treatment issues that arise from them. The handbook is structured within a conceptual framework, which includes an overview of the field, ethical considerations, risk factors and mechanisms, diagnosis and assessment, and counseling and rehabilitation principles. It integrates research findings from a wide variety of professional and amateur sports, including football, hockey, boxing, wrestling, and others. The book also addresses collateral effects of mild and traumatic head injury such as Alzheimer's disease, Parkinson's disease, and depression. Synthesizing all the diverse facets of the burgeoning field of sport neuropsychology, this clear and concise volume will serve as a springboard for research yet to be realized. Key features: Integrates knowledge from sports and exercise science with neuropsychology Includes the latest research on the role of neuroimaging and electrophysical approaches to understanding concussion Clarifies the professional training and ethical behavior of a sport neuropsychologist Highlights the emotional components of concussion Discusses the acute and chronic effects of repeated head trauma

Sports Medicine, An Issue of Physical Medicine and Rehabilitation Clinics of North America,

This book clarifies and verifies the role sport has as an alternative marker in understanding and mapping memory in Japan, by applying the concept of lieux de mémoire (realms of memory) to sport in Japan. Japanese history and national construction have not been short of sports landmarks since the end of the nineteenth century. Western-style sports were introduced into Japan in order to modernize the country and develop a culture of consciousness about bodies resembling that of the Western world. Japan's modernization has been a process of embracing Western thought and culture while at the same time attempting to establish what distinguishes Japan from the West. In this context, sports functioned as sites of contested identities and memories. The Olympics, baseball and soccer have produced memories in Japan, but so too have martial arts, which by their very name signify an attempt to create traditions beyond Western sports. Because modern sports form bodies of modern citizens and, at the same time, offer countless opportunities for competition with other nations, they provide an excellent ground for testing and contesting national identifications. By revealing some of the key realms of memory in the Japanese field of sports, this book shows how memories and counter-memories of (sport) moments, places, and heroes constitute an inventory for identity. This book was originally published as a special issue of Sport in Society.

North Punjab Fishing Club Angler's Handbook

The conventional history of sport, as conveyed by television and the sports press, has thrown up a great many apparent turning points, but knowledge of these apparently defining moments is often slight. This book offers readable, in-depth

studies of a series of these watersheds in sport history and of the circumstances in which they came about.

Sports in North America: Sports, prosperity, conformity, cultural stirrings, 1950-1960

Stress in the DSM is referred to only in the sense of post traumatic stress disorder (PTSD). However, some research studies estimate up to two thirds of illnesses seen by general practitioners are 'stress related'—GI problems, sleep disturbance, mental concentration, headaches, fatigue, shortness of breath, high blood pressure, dermatitis, illnesses from lowered immune system, and vague aches and pains – all can be symptoms and outcomes of the elusive stress factor. This issue of *Psychiatric Clinics of North America* discusses the scientific medical facets of stress, written by mental health and medical practitioners. It looks at the brain-body connection of stress – what the body does to result in stress and varying results stress has on the body. This fascinating cross-discipline look at stress is intended for psychiatrists, general practitioners, cardiologists, GI specialists, neurologists, sleep medicine specialists, respiratory specialists, and others who diagnose and treat patients with stress suspected as part of the illness equation or with self-reported stress. Topics include: Measurement of stress; Anxiety and stress—how they work together; Relationship between genetics and stress; Role of glia in stress; Sleep and stress; Diet and stress; Supplements and stress; Effect of severe stress on early brain development, attachment, and emotions; Role of stress and fear on the development of psychopathology; Expressions of stress in psychiatric illness; Dermatologic manifestations of stress in normal and psychiatric populations; Humor and the psychological buffers of stress; Stress expression in children and adolescents; Stress in service members; Stress in the geriatric population.

Sports-Related Concussions in Youth

North and South draws on Gaskell's own experiences of the poverty and hardship of life in the industrial north of England. Her heroine, Margaret Hale, is taken from the wealthy south by her nonconformist minister father, to live in a fictional northern town. The stark differences are explored through Margaret's abrupt change in circumstance, and her sympathetic reaction to the plight of the northerners. She comes into conflict with a local mill owner who proposes marriage to

Society, Politics, and Development in North East India

Is sport good for kids? When answering this question, both critics and advocates of youth sports tend to fixate on matters of health, whether condemning contact sports for their concussion risk or prescribing athletics as a cure for the childhood obesity epidemic. *Child's Play* presents a more nuanced examination of the issue, considering not only the physical impacts of youth athletics, but its psychological and social ramifications as well. The eleven original scholarly essays in this collection provide a probing look into how sports—in community athletic leagues, in schools, and even on television—play a major role in how young people view

themselves, shape their identities, and imagine their place in society. Rather than focusing exclusively on self-proclaimed jocks, the book considers how the culture of sports affects a wide variety of children and young people, including those who opt out of athletics. Not only does *Child's Play* examine disparities across lines of race, class, and gender, it also offers detailed examinations of how various minority populations, from transgender youth to Muslim immigrant girls, have participated in youth sports. Taken together, these essays offer a wide range of approaches to understanding the sociology of youth sports, including data-driven analyses that examine national trends, as well as ethnographic research that gives a voice to individual kids. *Child's Play* thus presents a comprehensive and compelling analysis of how, for better and for worse, the culture of sports is integral to the development of young people—and with them, the future of our society.

Sport Bibliography: Sport sciences

The spring issue of each year includes the program of the society's annual convention.

Exercise and Sport Sciences Reviews

Cultures and nations remember themselves with select bodily images, evocative rituals and texts. This volume illustrates how sport is used in the creation, maintenance and now global dissemination of a nation's cherished values. Carefully drawn cases of sport in North America - American baseball and football, figure skating and gymnastics, Canadian hockey and track and field, for example - show the potency of sport's "cultural work". The book captures uplifting images which are stressed in the public performance and national and international broadcasting of sport, but also notes the omissions and distortions of social reality that persist in sport performance and mass marketing in North America.

Sports in North America: Sports in the progressive era, 1900-1920

Bibliographie Du Sport

Examines the ethnic experience in North America through the unique lens of the history of sports, utilizing original research.

Ethnicity and Sport in North American History and Culture

The Idea of North

Taking examples from the United States and Canada, this comprehensive text offers compassionate and critical accounts of the Native American sporting experience. It challenges popular images of indigenous athletes and athletics; it explores Native American participation in and appropriation of EuroAmerican

sports; and it unpacks social categories, particularly gender, race and heritage and their implications for understanding Native Americans and sport in North America. Contributors discuss the interplay of power and possibility, difference and identity, representation and remembrance that have shaped the means and meanings of American Indians playing sport. Included in this book are discussions on: continuity and change, the place of sport in the survival and adaptation of indigenous beliefs and behaviours the play of power and the power of play within indigenous communities, intercultural spaces, and American popular culture the contradictions and conditions of possibilities sport has offered American Indians the politics and poetics of identity the axes of difference structuring the indigenous sporting experience, particularly, gender, race, and nationalism representations and stagings of Indianness in the context of sport.

Sports

This book is designed to reflect both our current knowledge regarding sport, globalisation and "encounters" with several important "post-colonial" or non-western societies and to draw together scholars from a range of different disciplines. Case studies of cultural encounters in Central, South-East Asia, Asia Minor and the Arabian peninsula capture the paradoxical processes of emulation, resistance and transformation that are at work in the diffusion and development of "sport" and body cultures. These case studies bring together insights from anthropology, cultural studies, geography, history, law, sociology, various area and post-colonial studies.
