## The Last Dive

## SCUBA Journal

With its protected nearshore reef system, gem-clear seas, and sweeping conservation efforts, Bonaire has

earned the title it boasts on its license plates: Diver's Paradise. For Andrew Jalbert, who first visited in the early 1990s, there was a draw to the island that was hard to shake. He returned regularly over the next twenty-five years in a variety of capacities: as a scuba instructor, a sun-starved vacationer, and a writer/photographer. What he hadn't expected at 43 years old, however, was to return as a father. Back on Bonaire is the story of stitching together two very different lives: one of airports, scuba tanks, article assignments and underwater cameras; the other of car seats, kindergarten, skinned knees and the boundless curiosity of a child. Jalbert merges both worlds in an enjoyable, funny and at times touching account of introducing his son to his beloved Bonaire. Along the way the reader gets a look at the island's cultural and natural history, some of its people and the importance of preserving the ecology of Bonaire – for his son and future generations.

### **U S Navy Diving Manual**

Chris and Chrissy Rouse, an experienced father-and-son scuba diving team, hoped to achieve widespread recognition for their outstanding but controversial diving skills. Obsessed and ambitious, they sought to solve the secrets of a mysterious, undocumented World War II German U-boat that lay under 230 feet of water, only a half-day's mission from New York Harbor. In doing so, they paid the ultimate price in their quest for fame. Bernie Chowdhury, himself an expert diver and a close friend of the Rouses', explores the thrill-seeking world of deep-sea diving,

including its legendary figures, most celebrated triumphs, and gruesome tragedies. By examining the diver's psychology through the complex father-and-son dynamic, Chowdhury illuminates the extreme sport diver's push toward—and sometimes beyond—the limits of human endurance.

## **Technical Diving**

### **Learning with Simulations**

This full-color, extensively illustrated revision of a highly respected dive manual includes the information necessary to learn open water diving. Timely discussion include ecology and scuba techniques, equipment and safety materials, women's diving issues and concerns, expanded CPR information, air sharing and hand signals.

### **The Secret Life of Lobsters**

The British Sub-Aqua Club has been running instructor's courses for some years, and has developed its own methods and style. This book, published under their auspices, covers everything the diving instructor should know, from basic lessons in the pool, fault analysis and correction, surface lessons and underwater positioning to teaching in open water, from large or small boats, including planning, choice of site, safety, equipment, dry-runs and assessment of performance. The book also offers general guidelines on methods of learning and teaching techniques. There is a chapter on visual aids, including projectors and videos, and tips on giving formal lectures and conference presentations.

The True Story of \$100 Million in Lost Russian Gold -and One Man's Lifelong Quest to Recover It Keith Jessop and Neil Hanson "Outstanding, inspiring, and beautifully told. No true tale of the sea makes better reading."-Clive Cussler Here is the true tale of a small-time salvage diver, the crushing depths of the sea, and the richest prize ever found-\$100 million in pure gold. Follow salvage diver Keith Jessop as he battles nature, governments, traitors, salvage monopolies, and, of course, lawyers to claim the grand prize of wrecks-the HMS Edinburgh. Filled with ten tons of Russian gold, the ship had been sought by many, but never found. Through unyielding determination, extraordinary physical prowess, and keen intelligence, Keith Jessop risks all to reach his final destination, and keeps readers on the edge of their seats.

### **SSI Open Water Instructor Manual - French Version**

### **Open water diver manual**

In this intimate portrait of an island lobstering community and an eccentric band of renegade biologists, journalist Trevor Corson escorts the reader onto the slippery decks of fishing boats, through danger-filled scuba dives, and deep into the churning currents of the Gulf of Maine to learn about the secret undersea lives of lobsters. This P.S. edition features an extra 16 pages of insights into the book, including author interviews, recommended reading, and more.

## Shadow Divers

SCUBA is a fun, relaxing, educational, interesting, and -- if approached properly -- safe activity, it is nonetheless a sport that has risks. SCUBA diving is in fact an extreme sport that can injure or even kill very quickly, and in some very nasty ways. What we are doing is entering an alien environment that is normally hostile to human life. We cannot breathe in water without some kind of mechanical assistance. These are facts and the details should be covered in every Open Water (OW) class. All too often in today's society, however, people do not want to take the time to properly prepare and get the education to safely take on new tasks. Some agencies appear to have responded to this by developing training programs that turn out high numbers of certified divers in shorter time frames, necessitating the reduction of time spent on what I consider to be some necessary basic skills. While this has resulted in great numbers of new divers entering the water, it has not resulted in many of those divers staying in the water. New divers are often given just enough training to enable them to dive in the most benign conditions under close supervision. Even then, there are still those who find out their initial training was just not adequate. It is at this point that they either make the decision to get more training or they leave the sport. The latter happens all too often. The former, when it does happen, does not always occur for the right reasons. Students should return to training to expand their diving and learn new skills; they should not have to return for new training just to be able to enjoy the

sport safely. To require students to come back for basic information is something I find very troubling, and in some cases, has actually cost divers their lives. A lack of rescue instruction has resulted in a number of diver deaths when buddies did not know how to drop weights, support a diver at the surface, or even stay in contact with their buddy. This is another area frequently talked about, but all too often not actually put into practice. The concept of always diving with a buddy and just what that means in the "real world" is often given too little attention. Unfortunately, it is impossible to foresee every conceivable situation that can arise, but there are many basic issues that can be covered. The following chapters will hopefully address much of what is being overlooked or delayed in many programs as they exist today. It is my hope that this information also finds its way into the hands of those who have not yet begun the training process. I have included a chapter on how to select an instructor based on the quality of instruction and the content of the course. In some cases, these classes may cost more than the less comprehensive courses also available, but usually they do not. In fact, when you consider the additional skills and education gained from a more comprehensive course, you will find that you have received much more value for each dollar spent. In addition, you gain priceless benefits in the form of greater confidence, enjoyment, skills, and -- most importantly -- safety. Enjoy and dive safe

Experienced traveler and author Amy E. Robertson provides honest insight into the best Honduras has to offer, from exploring the Bay Islands to hiking the trails of Sierra de Agalta. Robertson also includes unique travel itineraries, such as Caribbean Sun and Sand, Historic Honduras, and Adventure Hiking. With expert advice on how to make the most of a trip to this Caribbean destination, Moon Honduras & the Bay Islands gives travelers the tools they need to create a more personal and memorable experience.

#### **NOAA Diving Manual**

Socio-scientific issues (SSI) are open-ended, multifaceted social issues with conceptual links to science. They are challenging to negotiate and resolve, and they create ideal contexts for bridging school science and the lived experience of students. This book presents the latest findings from the innovative practice and systematic investigation of science education in the context of socio-scientific issues. *Socio-scientific Issues in the Classroom: Teaching, Learning and Research* focuses on how SSI can be productively incorporated into science

classrooms and what SSI-based education can accomplish regarding student learning, practices and interest. It covers numerous topics that address key themes for contemporary science education including scientific literacy, goals for science teaching and learning, situated learning as a theoretical perspective for science education, and science for citizenship. It presents a wide range of classroom-based research projects that offer new insights for SSI-based education. Authored by leading researchers from eight countries across four continents, this book is an important compendium of syntheses and insights for veteran researchers, teachers and curriculum designers eager to advance the SSI agenda.

## **Open Water Diver Manual**

The only comprehensive manual for the training and reference of lifeguards at both surf and inland beaches, this manual is designed to be used in basic training of open water (beach) lifeguards and in junior lifeguard programs. It is an essential reference for beach lifeguard supervisors and administrators. This text is consistent with the requirements of the USLA Lifeguard Agency Certification Program. Over 300 pages in length, the manual contains over 100 photographs and 25 technical drawings.

## **Jeppesen's Open Water Sport Diver Manual**

In the tradition of Jon Krakauer's *Into Thin Air* and Sebastian Junger's *The Perfect Storm* comes a true tale of riveting adventure in which two weekend scuba divers risk everything to solve a great historical mystery—and make history themselves. For John Chatterton and Richie Kohler, deep wreck diving was more than a sport. Testing themselves against treacherous currents, braving depths that induced hallucinatory effects, navigating through wreckage as perilous as a minefield, they pushed themselves to their limits and beyond, brushing against death more than once in the rusting hulks of sunken ships. But in the fall of 1991, not even these courageous divers were prepared for what they found 230 feet below the surface, in the frigid Atlantic waters sixty miles off the coast of New Jersey: a World War II German U-boat, its ruined interior a macabre wasteland of twisted metal, tangled wires, and human bones—all buried under decades of accumulated sediment. No identifying marks were visible on the submarine or the few artifacts brought to the surface. No historian, expert, or government had a clue as to which U-boat the men had found. In fact, the official records all agreed that there simply could not be a sunken U-boat and crew at that location. Over the next six years, an elite team of divers embarked on a quest to solve the mystery. Some of them would not live to see its end. Chatterton and Kohler, at first bitter rivals, would be drawn into a friendship that deepened to an almost mystical sense of brotherhood

with each other and with the drowned U-boat sailors—former enemies of their country. As the men’s marriages frayed under the pressure of a shared obsession, their dives grew more daring, and each realized that he was hunting more than the identities of a lost U-boat and its nameless crew. Author Robert Kurson’s account of this quest is at once thrilling and emotionally complex, and it is written with a vivid sense of what divers actually experience when they meet the dangers of the ocean’s underworld. The story of Shadow Divers often seems too amazing to be true, but it all happened, two hundred thirty feet down, in the deep blue sea. **BONUS:** This edition includes an excerpt from Robert Kurson's *Pirate Hunters*.
