Although conflict was once restricted to land, the introduction of warships and planes eventually expanded the theater of war to include both water and sky. New combat strategies emerged with these changing technologies and dramatically impacted such events as the First World War. This comprehensive volume examines the various crafts that have shifted the front lines of war to previously unimagined heights and depths and the tactics that have accompanied these developments.

Galbraith's classic on the "economics of abundance" is, in the words of the New York Times, "a compelling challenge to conventional thought." With customary clarity, eloquence, and humor, Galbraith cuts to the heart of what economic security means (and doesn't mean) in today's world and lays bare the hazards of individual and societal complacency about economic inequity. While "affluent society" and "conventional wisdom" (first used in this book) have entered the vernacular, the message of the book has not been so widely embraced--reason enough to rediscover The Affluent Society. An examination of analysis and analysis practices for defense planning, the paper's purpose is to delineate priorities for the way ahead, i.e., for investments and other actions to ensure that future models and simulations will serve the needs of decisionmakers. The analysis in question is accomplished for Quadrennial Reviews and for continuing work on capability assessments, requirements analysis, and program analysis.
