Transactions - North East Coast Institution of Engineers and Shipbuilders

In January 1982, archaeologists conducting a pre-construction excavation at 175 Water Street in Lower Manhattan found the remains of an eighteenth-century ship. Uncertain of what they had found or what its value might be, they called in two nautical archaeologists—Warren Riess and Sheli Smith—to direct the excavation and analysis of the ship’s remains. As it turned out, the mystery ship’s age and type meant that its careful study would help answer some important questions about the commerce and transportation of an earlier era of American history. The Ship that Held Up Wall Street tells the whole story of the discovery, excavation, and study of what came to be called the “Ronson ship site,” named for the site’s

developer, Howard Ronson. Entombed for more than two hundred years, the Princess Carolina proved to be the first major discovery of a colonial merchant ship. Years of arduous analytical work have led to critical breakthroughs revealing how the ship was designed and constructed, its probable identity as a vessel built in Charleston, South Carolina, its history as a merchant ship, and why and how it came to be buried in Manhattan.

author leads the reader through every stage of building a model of the vessel, from preliminary research and taking off lines to the actual construction of the hull and fittings, and its masting and rigging. Each clear, step-by-step stage is described in the text and illustrated with explanatory line drawings and photographs. Though a single ship is employed as an example, the techniques can equally well be applied to any wooden sailing ship. Since original publication in 1994 this volume has established itself as the standard work of reference for model hull construction and is indispensable for modelmakers who pride themselves on an accurate, elegant scratch-built technique.

In Ship Modeling Simplified, master model builder Frank Mastini puts to paper the methods he's developed over 30 years at the workbench to help novices take their first steps in an exciting pastime. You don't need the deftness of a surgeon or the vocabulary of an old salt to build a model. What you need is an understanding

coach. Mastini leads readers from the mysteries of choosing a kit and setting up a workshop through deciphering complicated instructions and on to painting, decorating, and displaying finished models--with patience and clarity, not condescension. He reveals dozens of shortcuts: How to plank a hull "egg-shell tight"; how to build and rig complicated mast assemblies without profanity; how to create sails that look like sails. . . . And along the way he points out things that beginners usually do wrong--beforehand, not after they've taken hammers to their projects. Ship Modeling Simplified even includes an Italian-English dictionary of nautical terms, the key to assembling the many high-quality Italian kits on the American market. Model building is fun, and not nearly as difficult as some experts would have you believe. Here is everything you'll ever need to get started in a hobby that will last a lifetime.

models from a kit. From the initial planning and kit selection through the various stages of construction, Julier takes the myth and mystery out of what many consider to be a complex subject, using easy-to-follow explanations, simple terminology, and more than one-hundred photographs to help modelers complete their projects. Some of the many topics covered include: adhesives, finishes, and fixings; tools, maintenance and safety; history and accuracy; hull planking; wales and rails; stern and quarter galleries; sails; yards and spars; standard running and rigging; kit manufacturers and available products; and much more. Pointing out the pitfalls of modeling and how to avoid them, Julier's latest guide will be of particular interest to beginning and intermediate modelers, but more experienced hands will also find much of value.

The Country Builder's Assistant

The master ship builders of seventeenth-century Venice formed part of what was arguably the greatest manufacturing complex in early modern Europe. As many as three thousand masters, apprentices, and laborers regularly worked in the city's enormous shipyards. This is the social history of the men and women who helped maintain not only the city's dominion over the sea but also its stability and peace.

Drawing on a variety of documents that include nearly a thousand petitions from the shipbuilders to the Venetian governments as well as on parish records, inventories, and wills, Robert C. Davis offers a vivid and compelling account of these early modern workers. He explores their mentality and describes their private and public worlds (which in some ways, he argues, prefigured the factories and company towns of a later era). He uncovers the far-reaching social and cultural role played by women in this industrial community. He shows how the Venetian government formed its shipbuilders into a militia to maintain public order. And he describes the often colorful ways in which Venetians dealt with the tensions that role provoked—including officially sanctioned community fistfights on the city's bridges. The recent decision by the Italian government to return the Venetian Arsenal to civilian control has sparked renewed interest in the subject among historians. *Shipbuilders of the Venetian Arsenal* offers new evidence on the ways in which large, state-run manufacturing operations furthered the industrialization process, as well as on the extent of workers' influence on the social dynamics of the early modern European city.
